2A FlowBooks

User Manual

Think Accounting, Think 2A FlowBooks

Version 2.3.5 · Edition 10-11-2026

Accounting, stock, tax and payroll for Ghanaian businesses, NGOs and churches. This edition covers version 2.3.5: the new name 2A FlowBooks, Ratio Analysis, customer messages at every job stage, your own invoice designs, how each salary was paid on the payslip, and every earlier change from version 2.1.6.

1. Welcome

2A FlowBooks is an accounting program built for Ghanaian small and medium businesses, shops, traders, service firms, NGOs and churches. It keeps your sales, purchases, expenses, stock, bank, fixed assets, payroll and tax records in one place, and produces the reports the Ghana Revenue Authority (GRA), your bank and your auditors ask for.

It runs on:

- **Windows, Mac and Linux** computers, as an installed desktop program that updates itself.
- **Android phones and tablets**, as an app downloaded from our website.
- **Any web browser**, including iPhone and iPad, where it can be added to the home screen like an app.

Your books are kept in your online company database, so the same company opens on every device you sign in on, and each person sees the same figures. If the internet goes off, the program keeps working from a copy saved on the device (section 2.8).

How to read this manual. It follows the order in which you will use the program: install, set up the company, add your team, add customers, suppliers and products, record daily transactions, close the month and read reports. Chapters 11 (HR and Payroll) and 12 (Non Profit mode) apply only if you use those features. Screenshots come from a sample company, Kasoa Fresh Traders, which has three branches: Kasoa, Accra and Kumasi.

Ghana settings used throughout: amounts in cedis (¢), dates as day-month-year, and the current GRA rates: VAT 15%, NHIL 2.5%, GETFund 2.5% (the COVID-19 levy has been abolished), and withholding tax of 3% on goods, 5% on works and 7.5% on services once a supplier's payments go above ¢2,000 in a year (20% for nonresidents). Tax rules change; check current rates with GRA or your accountant. **Words used in this manual**

Word	Meaning
Company	One set of books. Everything you record belongs to one company. One sign-in can belong to several companies.
Branch	A shop or office of the company. Each branch has its own stock, document numbers and reports.
User	A person who signs in to your company.
Role	A named set of rights, for example Administrator or Cashier. Each user has one.
Posting	Saving a transaction so that it writes its debit and credit lines to the ledger.
Ledger	The record of every debit and credit, from which all reports are built.
Licence key	The code that activates a paid subscription for your company.
Payroll add-on	The optional paid module for payslips, PAYE and SSNIT, with its own licence key.

1.1 What is new in versions 2.3.2 to 2.3.5

This edition of the manual covers version 2.3.5. The changes since version 2.3.1 are below, with the section that explains each one. 2A Prints Accounting is now called **2A FlowBooks**: the same program, with the same company books, logins, licence and settings.

Version 2.3.5

- **New sign-in screen**: the green 2A FlowBooks tile with the name and the slogan beside it, also on the Loading screen (section 2.5). **Sign out** shows a spinner while it signs you out.
- **How each salary was paid, on the payslip**: record Mobile Money, bank transfer and cheque payments with the transaction ID, bank reference or cheque number, the date paid and the amount sent, for one person or with **Record payments** for the whole month (section 11.8).

- **Payment details on payslip** in Payroll Setup: what the payslip shows, masked or full wallet numbers, whether a reference is required before a month is posted as paid, and one reference for each employee or one for the whole pay run (section 11.3).
- **Salary paid by** on the employee record, with the Mobile Money network, wallet number and wallet name (section 11.4).
- **Amount in words** reads correctly on round amounts ("Five Hundred Ghana Cedis Only") and small amounts ("Seventy Five Pesewas Only"). A foreign-currency invoice also spells out the amount in that currency (section 6.1).
- The Android app icon is the gold mark on a green tile.

Version 2.3.3

- **Royal Emerald**, a fifth invoice design; **Your colours** for Modern Green, Bold Corporate and Royal Emerald; and **Your own designs**: up to two designs made from your own letterhead (section 3.6).
- **Entry window layout**: invoices, orders, quotations, receipts, payments, credit notes and expenses are split into sections. Choose Plain, Style A, Style B or Style C (section 3.6). Trade Discount % now sits with the other discounts, below the items.
- A new app icon (the gold mark on a green tile), wider boxes in Branches and business units, and **What's new** shows the newest five versions.

Version 2.3.2

- **A new name: 2A FlowBooks**, with a new logo and the slogan Think Accounting, Think 2A FlowBooks. Installed copies update themselves and keep all their data. New website: 2aflowbooks.github.io (section 2.3).
- **Ratio Analysis**, a new report: each ratio for the period and the period before, explained in plain words (section 10.9).
- **Customer messages at every job stage**: tick each stage that should message the customer, each with its own message (section 9.7).
- **+ Add User** (was Invite Teammate) and **Resend invite**, with the date each invitation was sent (sections 4.1 and 4.2).
- New companies start with the **Administrator**, **Manager** and **Accountant** roles (section 4.1).
- **What's new** opens inside the program, without a browser (section 2.3).
- Linux: **.deb** and **.rpm** installers next to the AppImage (section 2.3).

1.2 What was new in version 2.3.1

Version 2.3.1 brought the changes below, with the section that explains each one.

One app for every kind of business

- **Business types** (new Admin tab **Business Type & Modules**, section 3.9). There are nine built-in types: General business, Printing and branding, Shop / trading, Services, Restaurant / food, Pharmacy, Construction, NGO / charity and Church. A type adds the accounts and business units that kind of business needs, switches the modules to sensible defaults, and sets the dashboard cards and quick actions. A new company picks its type on the first screen (section 3.1).
- **Your own business types.** A school, salon, hotel, farm or any other kind of business can be added as a type of its own, starting from the closest built-in type, without waiting for a new version of the program (section 3.9).
- **Modules.** Fourteen switches turn features off for the whole company, for example POS, Jobs, Payroll and HR, Fixed assets or Currencies. A module that is off disappears from the menu and the dashboard. Its data is kept, and it can be switched on again at any time (section 3.9).
- **New account packs** for Restaurant / food, Pharmacy and Construction, each with its own business units (section 3.7).

The new dashboard (section 2.6)

- A greeting line, the business type, and **quick action** buttons for your kind of business (New invoice, Receive payment, New job and so on).
- **Every card can be clicked** and opens its screen or report.
- A **Branch** and **Business unit** filter at the top.
- New cards: Sales today, Next VAT return, Profit by business unit, Sales by business unit, Sales by branch, Open jobs by stage, Jobs due today and late, and Biggest costs this month.
- ⚙ **Customise:** each user chooses and orders their own cards.

Business units (lines of business)

- What used to be called departments are now **business units**: your lines of business, for example D01 Design and D02 Digital Printing, with one **Shared** unit (D00) for administration and overheads (section 3.2). The staff **Department** in Payroll is separate and keeps its name.
- **A business unit on each account.** Every line posted to that account goes to its business unit, so a mixed invoice splits by itself (section 3.7).
- **New report: Business Unit Profit**, with overheads shared out as you choose (sections 3.2 and 10.1).
- **Salary charged to (business unit)** on each employee (section 11.4).
- The **Printing and branding** pack is rebuilt: 47 relevant accounts and the six business units D00 to D05.

Branches, accounts and opening balances

- **Opening balances per branch:** a branch's Trial Balance and Balance Sheet now include its own opening balance (section 3.8).
- **Renumber accounts:** a company that already has transactions can move its letter codes (CASH0001) to the numbered chart (1000 Assets and so on). History is kept (section 3.7).
- **Stock locations** are added, renamed and given to a branch in one place: Company Information > Branches and business units (sections 3.2 and 3.4).
- **Payroll uses the company's branches** from Company Information (section 11.3).

Fixed assets and VAT

- **Buying an asset:** the asset form asks whether the cost is already recorded. It can post a **cash purchase**, or a **purchase on credit** from a supplier that you pay later with Pay Expense, with a **VAT tick box** for input VAT (section 9.4).
- **Selling an asset:** Dispose can post the whole sale: the proceeds, the removal of cost and depreciation, the gain or loss and, when ticked, **output VAT** (section 9.4).
- **VAT due dates** on the GRA Filing Worksheet skip weekends and **public holidays**, and two more returns are listed: the non-resident digital (Section 15) return and the VAT withholding agent return (section 10.5).

Users and records

- **Users and roles: Make inactive** and **Remove**. A removed person also loses access on the server (sections 4.1 and 4.3).
- **Delete only unused records:** a customer, supplier or product that has been used has **Make inactive** instead of Delete, and inactive customers and suppliers are left out of every list you pick from (section 5.4).

Smaller changes

- **Paying more than is owed** asks first, on receipts, supplier payments and expense payments, online and offline (sections 6.8 and 7.3).
- **Taxable income** on payroll screens, payslips and reports is now pay after SSF and RSF, the figure PAYE is worked out from (section 11.6).
- The **Audit Log** shows readable record types and names (section 13.3).
- Clearer notes on screens, and a new description for the Manager role (section 4.1).

1.3 Earlier versions (2.1.6 to 2.3.0)

Version 2.3.0

- **Branches and departments** (now called business units): add branches with short codes, link stock locations to branches, and tag every document with its branch and department. Document numbers carry the branch code (INV/KAS/2026/0001), each branch sells only its own stock, and reports can be run for one branch or department (3.2, 4.6, 8, 10).
- **Numbered chart of accounts** for new companies (1000 Assets to 7000 Other income and tax) with group headings, subtotals and industry packs for printing, shops, services, NGOs and churches. Account imports translate other charts (3.1, 3.7).
- **User branch ticks and the All branches right** (4.3, 4.5, 4.6).
- **Jobs with stages:** due date, who is doing it, stages from Received to Delivered, late jobs on the dashboard, and an optional ready-made WhatsApp or email message to the customer (9.7).
- **Petty cash book** with money in, money out and a running balance (7.6).
- **Payroll:** PAYE can be switched off for the company or one employee, a wrong salary can be corrected, earnings as a percentage of gross, export of all employee details, a bank payment file with your own columns, and an editable Employee ID (11).
- **Safer numbers:** receipt and invoice numbers are checked with the server, so the same number is never given twice.
- **The program's own Yes/No boxes** replace the Windows pop-ups that could freeze the screen. Enter means OK and Escape means Cancel.

Version 2.2.2: the Accounting settings right and roles copied from existing roles (4.4), recurring expenses (7.5), standard Ghana expense accounts (3.7), the COVID levy removed, jobs on journals, Quick Sale, deposits and credit notes, a customer or supplier on journal lines (9.1), each product's own Sales, Inventory and Cost of Sales accounts, Show on Quick Sale, and the stock check (5.3, 8.4).

Versions 2.2.0 and 2.2.1: offline invoices, receipts, expenses and payments (2.8), the phone layout and the Android app (2.9), Bluetooth and computer receipt printers (6.2), fast opening for large companies (3.3), licences checked by the server, and the licence terms.

Versions 2.1.7 to 2.1.9: the update setting (3.3), GRA E-VAT invoice fields and the E-VAT register (6.10), Void instead of delete (6.1), working hours and automatic backups at closing time (3.3, 13.2), the Ledger Check (3.3) and offline viewing.

Version 2.1.6: depreciation methods and the depreciation schedule, automatic month-end depreciation (9.4), and Excel or CSV imports with View sample (3.3).

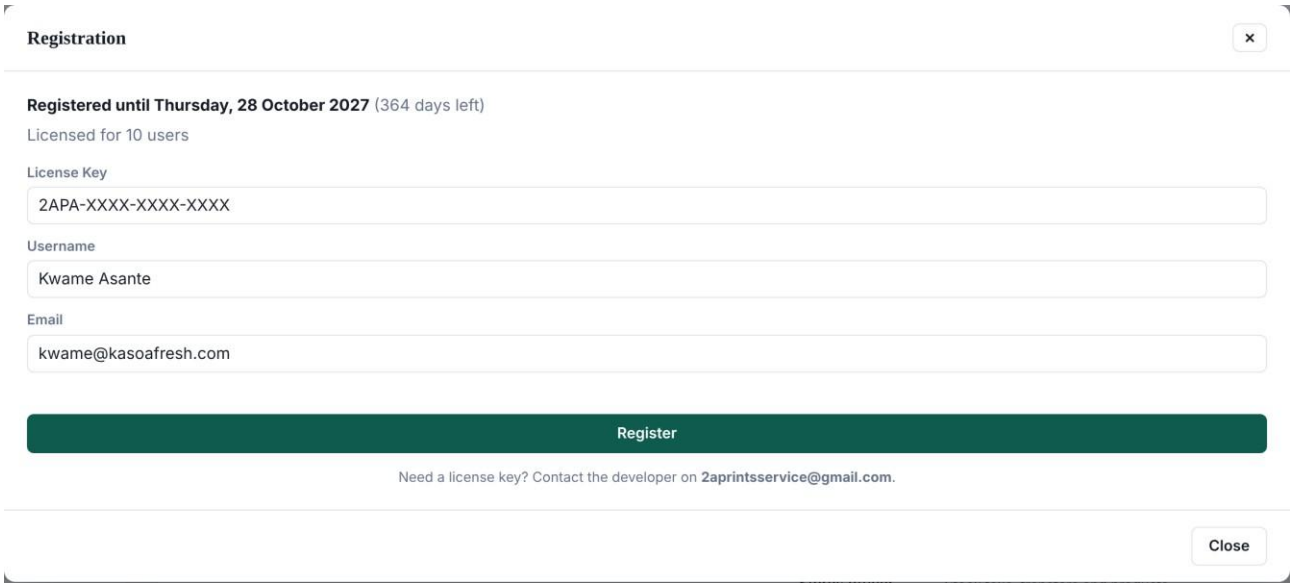

2. Getting started

2.1 The 30-day free trial

Every new company gets a 30-day free trial with all the main features. A banner on the Dashboard shows the days left and has three buttons: **Enter licence key**, **Request more time** and **WhatsApp us**. Your data stays safe when the trial ends: you then get 7 more days in which you can open, view and export your records but not post new ones, and after that the registration screen appears until a key is entered.

2.2 Buying and entering a licence key

1. Choose a plan on our website or contact us on WhatsApp (0546 533 134) or by email (2aprintsservice@gmail.com). Accounting is priced per user per month; the Payroll add-on is priced per employee and has its own key.
2. Pay by Mobile Money. Your licence key is sent by email once payment is confirmed.
3. In the program, click **Enter licence key** on the trial banner, or open **Admin / Settings > User Rights > Registration** (section 4.7). If the trial has already ended, the registration screen appears when you sign in.
4. Paste the key exactly as received and click **Register**. The licence server checks the key and the screen shows your plan and expiry date.

The registration window

A Payroll key is entered in **Payroll > Payroll Setup > Licence** (section 11.2). If a key is refused, check that you copied it with no spaces and that the internet is on, then contact us.

2.3 Installing the program

Download from our website (https://2aflowbooks.github.io) or from the Downloads page of the latest release.

Windows

1. Download **2A-FlowBooks-Setup.exe** and double-click it.
2. If Windows shows "Windows protected your PC", click **More info**, then **Run anyway**.
3. Read and accept the licence terms, choose where to install, and finish. A desktop shortcut is created.

Mac (Apple chip or Intel)

1. Download the Mac zip for your computer and open it.
2. Drag **2A FlowBooks** into Applications and open it once. If you still have the older **2A Prints Accounting** app, delete it.
3. If the Mac says it cannot be opened, open **System Settings > Privacy & Security** and click **Open Anyway**. (An older download that says the app is "damaged" can be fixed by running xattr -cr "/Applications/2A FlowBooks.app" in Terminal.)

Linux

Ubuntu, Debian or Mint: download the **.deb** file and double-click it to open it in your Software app, then click **Install**. Or in a terminal: sudo apt install ./file.deb

Fedora: download the **.rpm** file and install it the same way, or in a terminal: sudo dnf install ./file.rpm

Other Linux: the **AppImage** needs no install. Right-click it, allow running it as a program (or chmod +x), then double-click it. Never open it with Disks.

Android

1. On the phone, open our website in Chrome and tap the Android download.
2. If Chrome warns about the file, tap **Download anyway**.
3. Open the downloaded file. If Play Protect warns you, tap **More details > Install anyway**. If the download **Downloads** and tap the file there.
4. The app checks for updates once a day and offers new versions to download.

iPhone, iPad and any browser

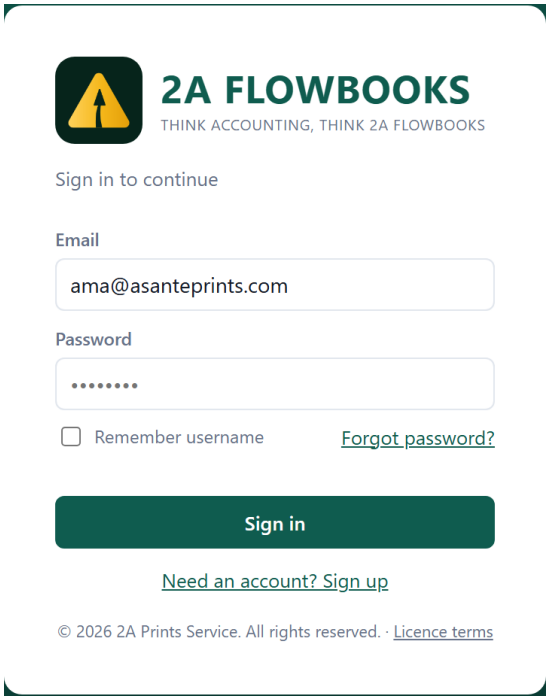

Open the web app (https://kingzizou.github.io/2A-Accounting-releases/) in Safari or any browser and sign in. On an iPhone, tap **Share > Add to Home Screen** to get an app icon.

Updates. The desktop program updates itself. Each computer can be set to Automatic or Ask before downloading (section 3.3). Accept the restart when a new version has downloaded. **What's new** in the Update available box shows the new version's notes inside the program, and Admin > General Settings > About > **What's new** lists the newest five versions. Both work without a browser.

2.4 Creating your company account

1. On the first screen click **Need an account? Sign up**.
2. Enter your **Company Name**, **Email** and a **Password**, then click **Create account**.
3. The first person to sign up becomes the company **owner** and Administrator.
4. The program asks **What kind of organisation is this?**, the **kind of business** and which account codes to use (section 3.1).

2.5 Signing in, switching company and signing out

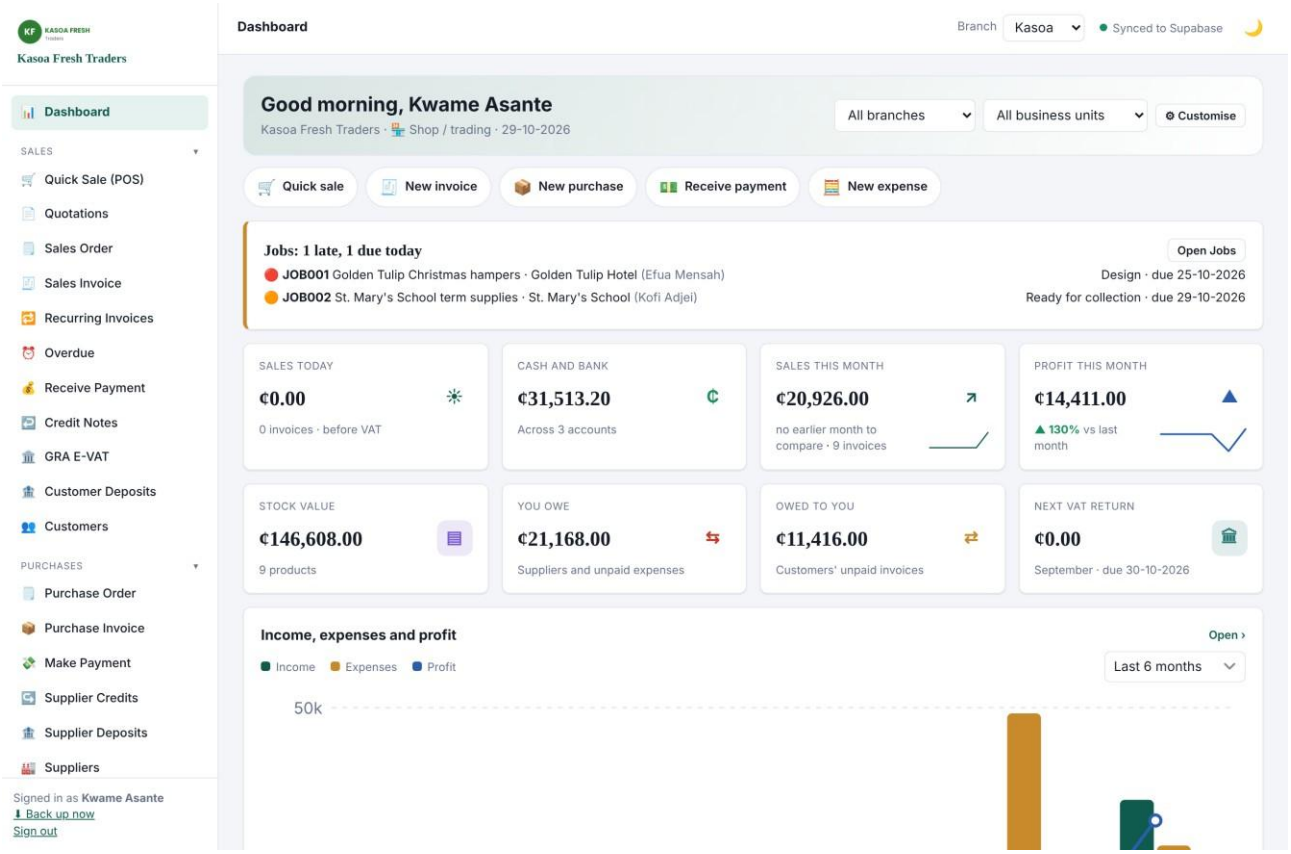

The sign-in screen

Enter your **Email** and **Password** and click **Sign in**. The screen shows the green 2A FlowBooks tile with the name and the slogan Think Accounting, Think 2A FlowBooks beside it. Tick **Remember username** to keep your email on this device. If you forget your password, click **Forgot password?** and follow the link in the email.

If your sign-in belongs to more than one company, click **Switch** at the bottom of the menu to change company.

Sign out is at the bottom of the menu, and shows a spinner while it signs you out. On your own device you can keep the saved offline copy so you can sign in again without internet; on a shared computer remove it. The program asks each time unless you choose a fixed answer in General Settings > Working Offline.

2.6 Finding your way around

The Dashboard

The menu on the left lists every area you have rights to and every module that is switched on (section 3.9), in groups: Sales, Purchases, Expenses, Products, General, HR / Employees, Payroll, Reports and System. Click a group name to fold it away.

The top bar shows the screen name, the **Branch** box when the company has branches, the sync status ("Synced to Supabase") and a moon icon that switches between light and dark screens.

The bottom of the menu shows who is signed in, **Back up now**, **Switch** (several companies) and **Sign out**.

Lists have a search box (type to search, or pick what to search by), filters, Export (CSV), Export (.xlsx) and Print buttons, and a choice of oldest or newest first.

Forms have Save & New (save and start another) and Save & Close. Any list box with many entries can be searched by typing.

Yes/No questions appear in the program's own box. Enter means OK and Escape means Cancel.

The Dashboard

The Dashboard is the first screen after signing in. What it shows depends on the business type (section 3.9) and on each person's own choice of cards.

The greeting line says good morning, afternoon or evening with your name, and shows the company, the business type and today's date.

Quick actions are the buttons under the greeting, for the jobs done most often in your kind of business. A printing company sees New invoice, Receive payment, New job, Quick sale and New expense; a shop sees Quick sale first. Only the actions you have rights to, and whose module is on, are shown.

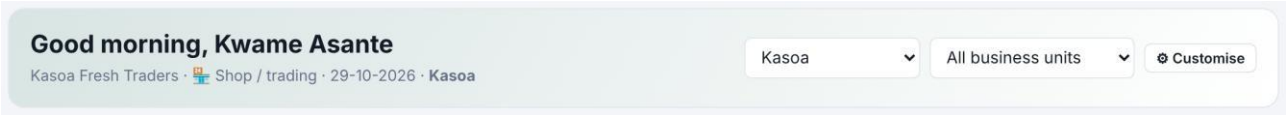

Reminders appear under the quick actions when needed: the Getting started list for a new company (it ticks itself as you finish each step; **Hide** removes it), the backup reminder, the Ledger Check warning and jobs that are late or due today.

Cards are laid out in a grid that fits a phone, a tablet or a computer screen. **Click a card** to open its screen or report: Profit opens the Profit & Loss, Owed to you opens Overdue, Next VAT return opens the GRA Filing Worksheet, and so on.

The cards you can choose from

Kind	Cards
Figures	Cash and bank, Sales today, Sales this month, Profit this month, Owed to you, You owe, Stock value, Open jobs, Next VAT return
Charts and lists	Income, expenses and profit (chart), Money owed to you by age, Top customers this year, Best sellers this year, Running low on stock, Biggest costs this month, Recent activity
Business units and branches	Profit by business unit this year (contribution and margin), Sales by business unit this month, Sales by branch this month
Jobs	Open jobs by stage, Jobs due today and late
NGOs and churches	Funds and grants (chapter 12)

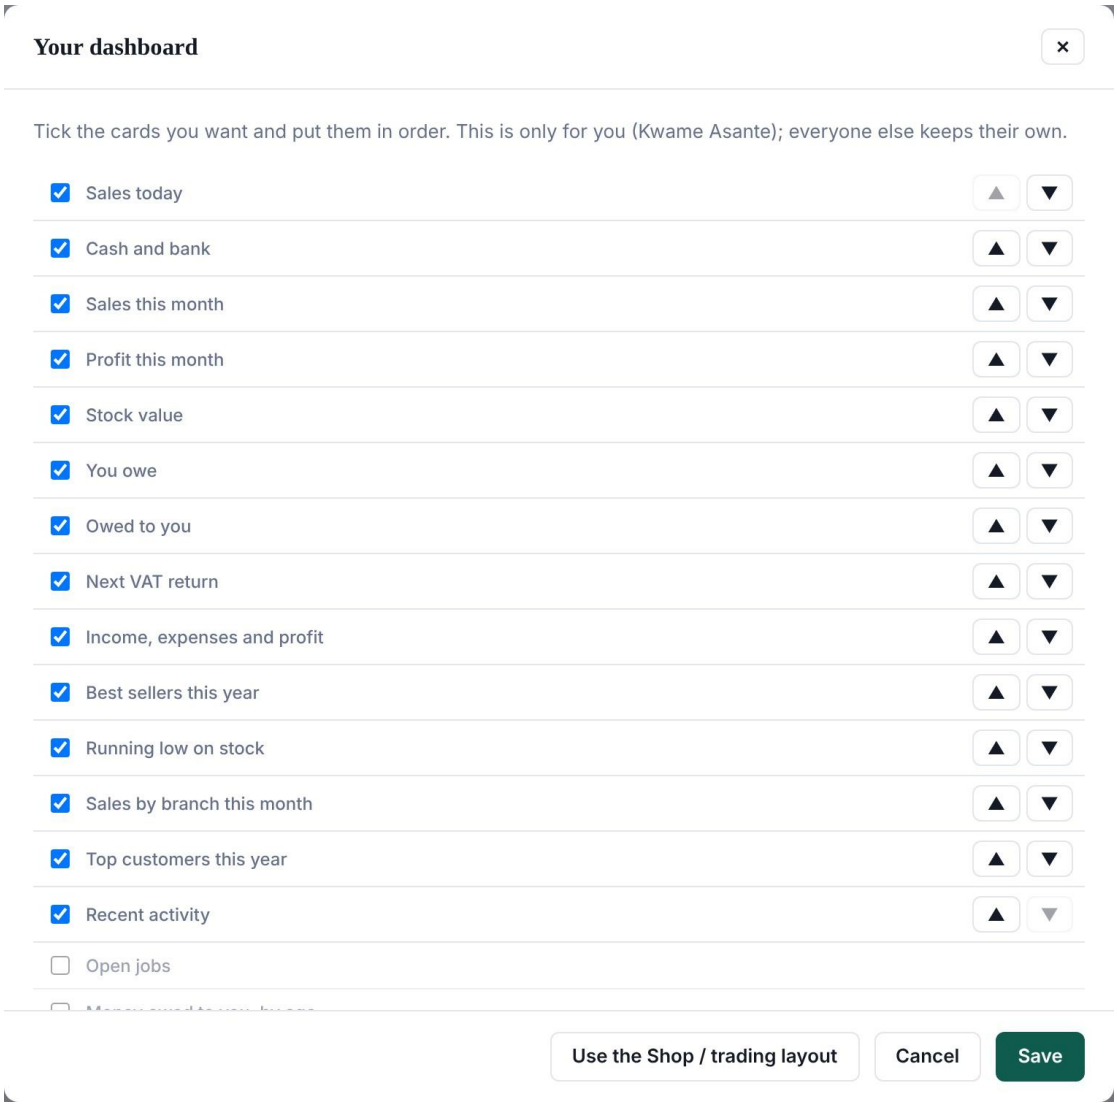

A card whose module is switched off is not offered. Sales figures on the dashboard are before VAT and levies, taken from the income accounts, so they agree with the Profit & Loss.

The branch and business unit filter

Filtering by branch and business unit. When the company has branches or business units, two boxes appear at the top right: **All branches** (or one branch) and **All business units** (or one unit). Sales, profit, the chart, costs and recent activity follow both boxes. Cash, money owed and stock follow the branch box only, because they are not split by business unit; a note under the quick actions says so. A person who works in some branches only sees "All my branches". The program remembers the choice on each computer.

Customise: your own cards. Click ⚙ **Customise** at the top right. Tick the cards you want, untick the ones you **Save**. This changes your own dashboard only; everyone else keeps theirs. **Use the … layout** goes back to the cards of the business type.

Choosing your own cards

2.7 Setting up, step by step

1. Answer the first-run question, including the kind of business (section 3.1). Check the modules in Admin > Business Type & Modules (section 3.9).
2. Fill in Admin / Settings: Company Information, branches and business units if you have them, General Settings, the tax rates and payment methods (chapter 3).
3. Review the chart of accounts and enter opening balances (sections 3.7 and 3.8).
4. Add or import customers, suppliers and products (chapter 5).
5. Invite your team and give each person a role (chapter 4).
6. Raise your first sales invoice (chapter 6).
7. Make your first backup (section 13.2).

2.8 Working offline

When the internet is off, the program opens from a copy saved on the device. You can view, print and export everything. Depending on your settings (section 3.3, Working Offline), you can also:

Sell in **Quick Sale**.

Enter new **sales invoices**, **customer receipts**, **expenses** and **expense payments**.

Each document entered offline gets the device's **till letter** in its number (for example INV/KAS/2026/A0005), shows as **Waiting to upload**, and is uploaded through the normal save when the connection is back. Changing or deleting a record always needs the internet. If anything cannot upload (for example a receipt that would overpay an invoice), it is listed under Admin > General Settings > Working Offline for an administrator to sort out.

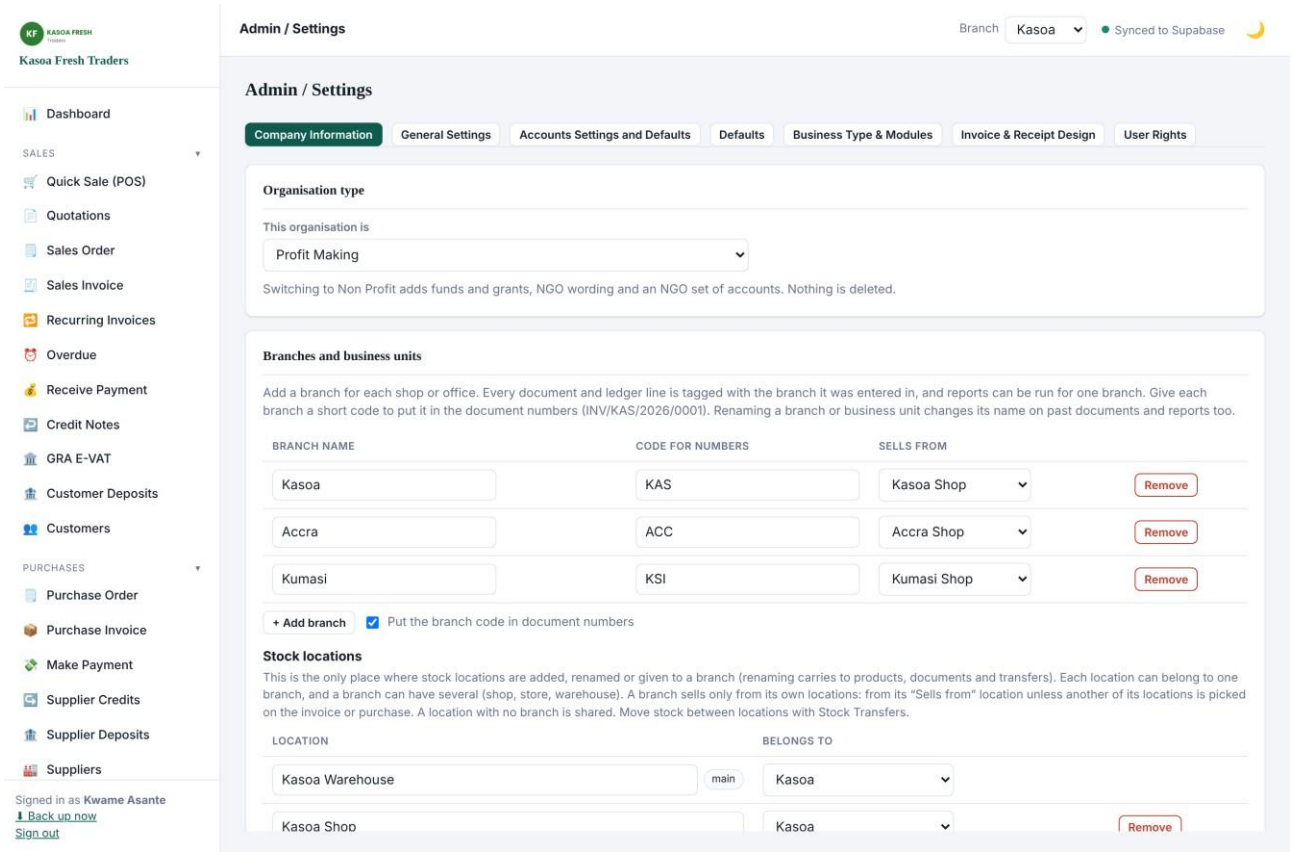

> **Tip:** Give each device that sells a different till letter, so offline numbers never clash.

2.9 Using a phone

On a phone the program uses a phone layout: lists appear as cards, tabs can be swiped, reports fit the screen, and Quick Sale shows a basket bar at the bottom. On Android the app can print receipts on a Bluetooth receipt printer (section 6.2) and scan barcodes with the camera.

3. Admin / Settings: setting up your company

Admin / Settings is where you tell the program about your business: its name and logo, its kind of business and modules, its branches and business units, how numbers and dates look, which accounts it posts to, the tax rates, how documents are numbered and printed, and who may do what. Open it from the menu: **System > Admin / Settings**.

Admin / Settings with its seven tabs

The screen has seven tabs across the top:

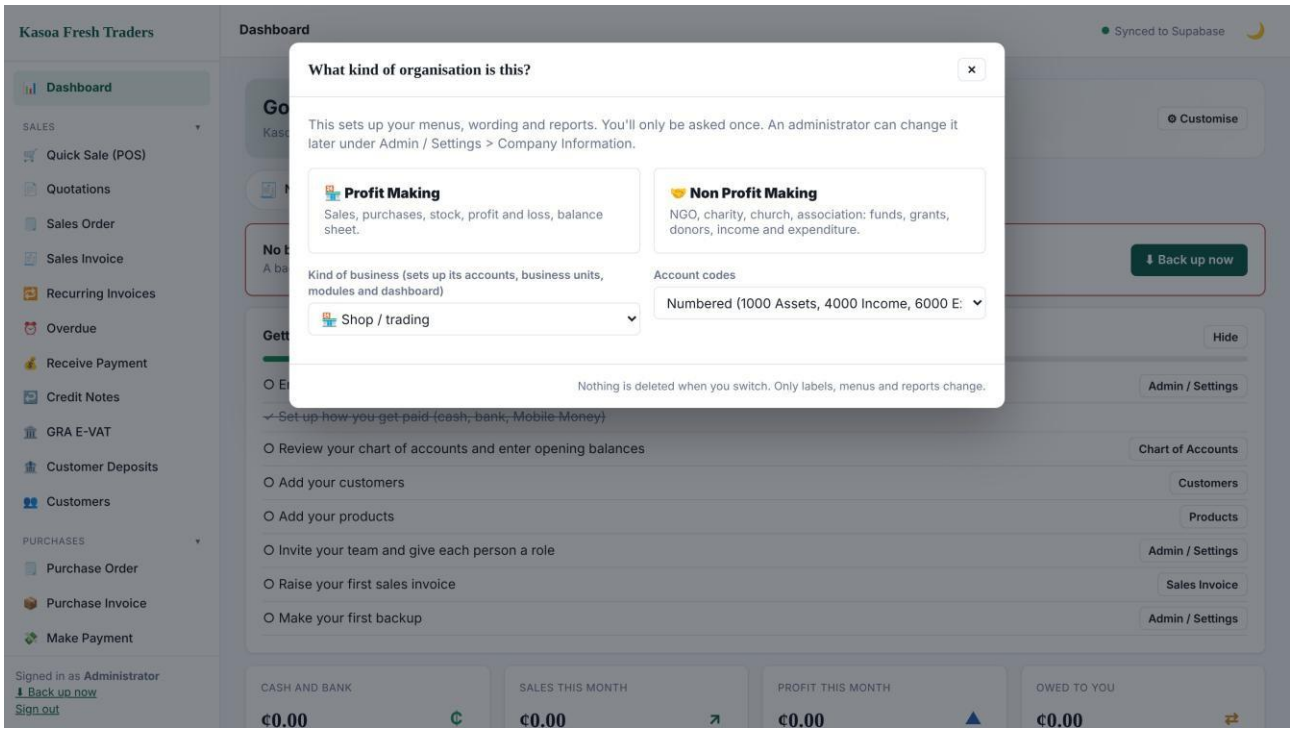

Tab	What it holds	Who sees it
Company Information	Organisation type, branches, stock locations, business units, company details and logo	Users with Edit or Full on the Admin right
General Settings	Formats, payment approval, accounting period, updates, offline working, working hours, backups, imports and other company-wide tools	Users with Edit or Full on the Admin right
Accounts Settings and Defaults	Month and year closing, default accounts, tax rates, withholding tax, depreciation default, payment methods, price lists, due dates and lists	Users with the Accounting settings right (View can look, Edit or Full can change)
Defaults	What new sales, purchases and expenses start with, document number prefixes and printed messages	Users with the Accounting settings right
Business Type & Modules	The kind of business, your own business types, and the modules that are switched on (section 3.9)	Users with Edit or Full on the Admin right
Invoice & Receipt Design	Logo size and the look of printed documents	Users with Edit or Full on the Admin right
User Rights	Your team, invitations, roles and rights, and the licence registration	Users with Edit or Full on the Admin right

> **Tip:** A person who has only the Accounting settings right sees just the two accounting tabs. If their right is View, a note at the top says they have view-only access and the Save buttons do nothing for them.

Set up in this order the first time: Company Information (details, logo, branches and business units), Business Type & Modules (check the modules), General Settings (formats and accounting period), Accounts Settings and Defaults (check the tax rates and payment methods), Defaults, Invoice & Receipt Design, then User Rights (invite your team). Do this before you record transactions, because some choices (such as the numbered chart of accounts) can only be made in a company with no transactions yet.

3.1 The first question: what kind of organisation is this?

The first time an administrator opens a new company, the program asks **What kind of organisation is this?** It is asked once only.

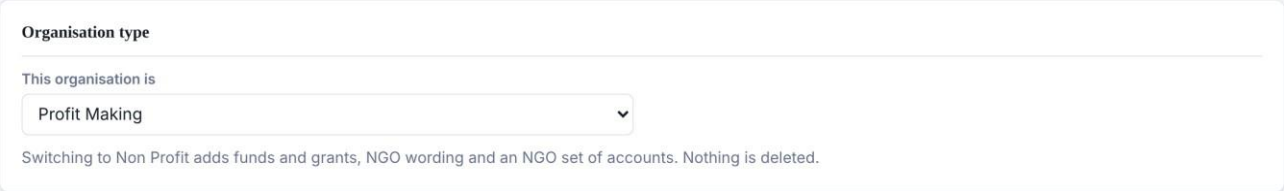

The first-run question with the chart of accounts choice

1. Click **Profit Making** (shops, traders, service firms) or **Non Profit Making** (NGO, charity, church, association). Non Profit adds funds, grants, donor reports and NGO wording (chapter 12).
2. Under **Account codes**, choose **Numbered** (the default: 1000 Assets, 2000 Liabilities, 3000 Equity, 4000 Income, 5000 Cost of sales, 6000 Operating expenses, 7000 Other income, finance costs and tax) or the older **Letter codes** (CASH0001, SALE0001 and so on).
3. Under **Kind of business**, choose General business, Printing and branding, Shop / trading, Services, Restaurant / food, Pharmacy, Construction, NGO / charity, Church, or one of your own types. The program adds the accounts and business units that kind of business needs, switches the modules to that type's defaults and sets up the dashboard (section 3.9).

> **Tip:** The account codes question only appears for a new company. Once any transaction has been posted, an administrator can still move to numbered codes with **Renumber accounts** (section 3.7). The kind of business can be changed at any time in Admin > Business Type & Modules.

3.2 Company Information tab

Organisation type

Organisation type

This organisation is shows Profit Making or Non Profit Making. You can switch at any time; the program asks you to confirm, and nothing is deleted. Only labels, menus and reports change.

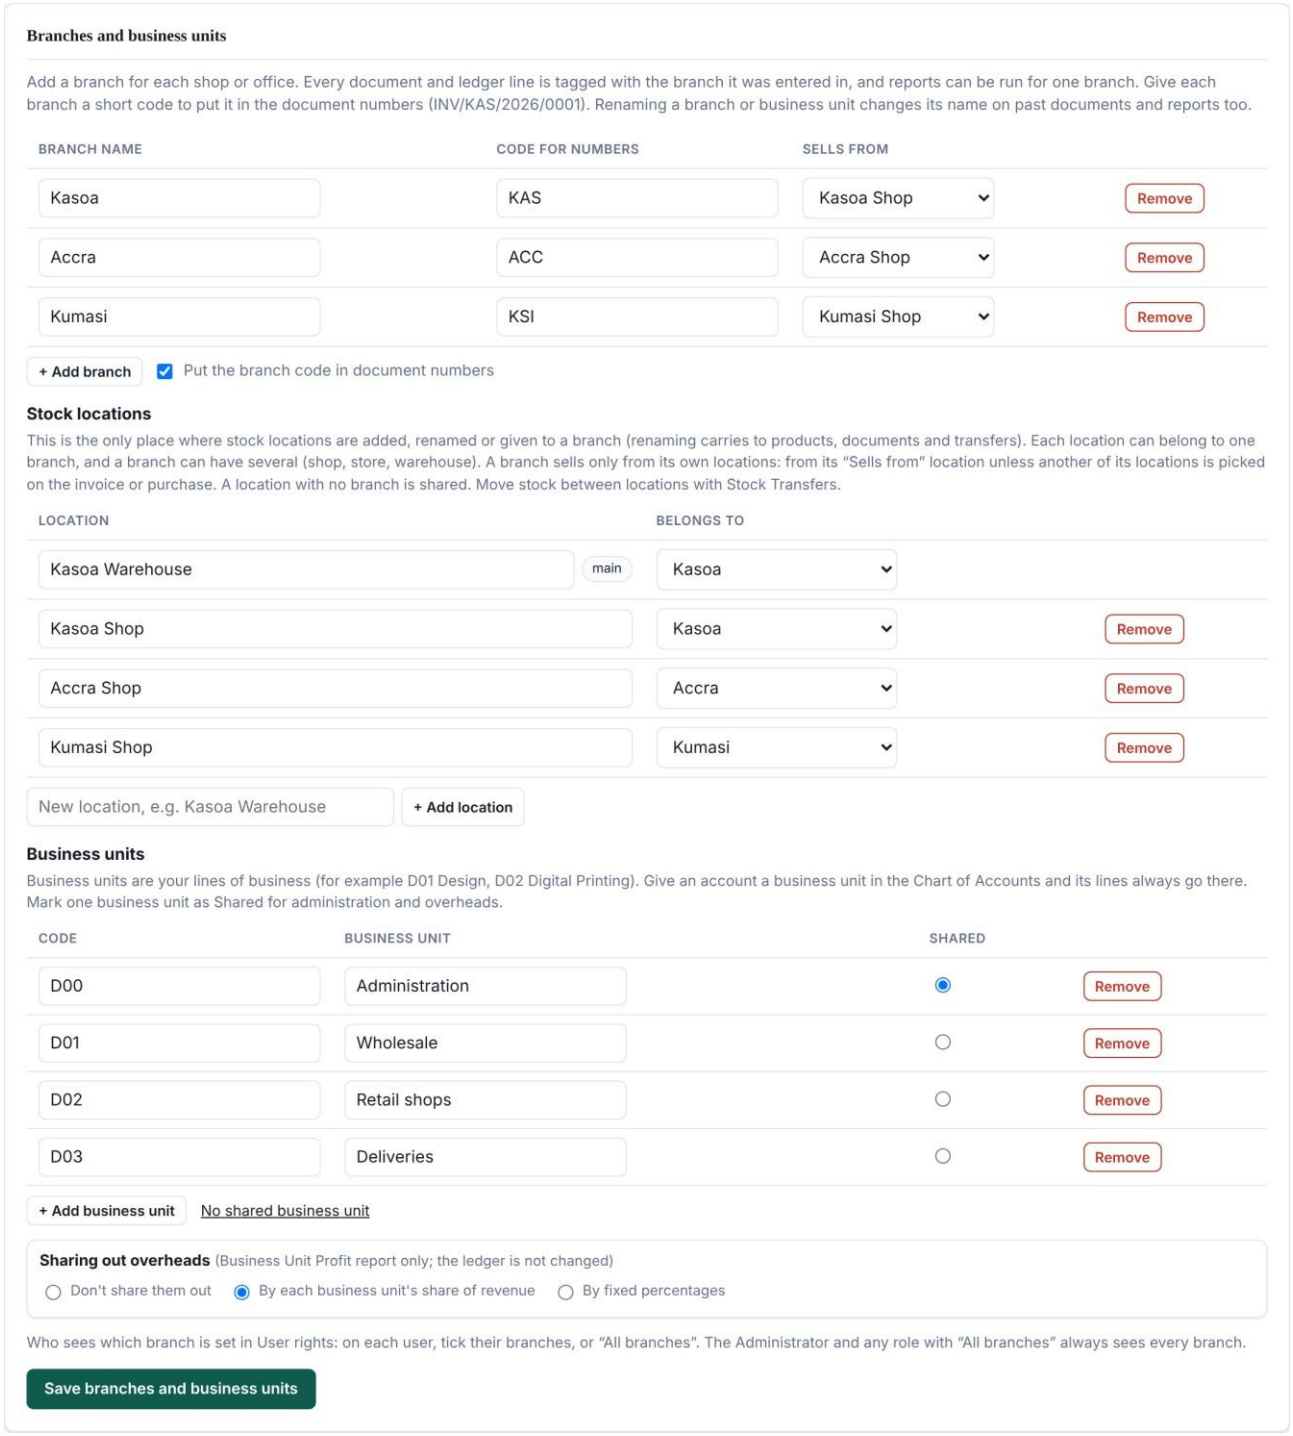

When the company is Non Profit, two more things appear here:

Menus tucked away in Non Profit mode (tick to hide). Tick the menus your organisation does not use (for example Quick Sale, Quotations, Sales Order, Recurring Invoices, Jobs, GRA E-VAT, or the whole HR or Payroll group). They disappear from the menu for everyone.

Grant details (add, rename or remove fields). Changes the fields shown on the grant form to suit your donors (section 12.2).

Branches and business units

Use this panel if your business has more than one shop, office or warehouse. It is part of the accounting licence; no extra key is needed. If you have only one place of business, you can leave the branch list empty and the program works exactly as before.

Branches, stock locations and business units

Branches

1. Click **+ Add branch**.
2. Type the **Branch name**, for example Kasoa.
3. Type a short **Code for numbers**, for example KAS. It can be up to 6 letters or numbers; the program turns it into capitals and removes spaces and symbols.
4. In **Sells from**, choose the stock location this branch sells from (for example Kasoa Shop), or leave it as shared stock.
5. Repeat for each branch, then click **Save branches and business units** at the bottom of the panel.

Tick or untick **Put the branch code in document numbers**. When it is ticked, every document entered in a branch carries the branch code, and each branch has its own counter:

Document	One branch or no branches	With branch codes
Sales invoice	INV/2026/0001	INV/KAS/2026/0001, INV/ACC/2026/0001
Receipt	REC/2026/0001	REC/KAS/2026/0001
Purchase	PUR/2026/0001	PUR/ACC/2026/0001

The code goes after the first part of the prefix. If a prefix has no "/" in it, the code is added at the end with a dash (for example INV-KAS-0001 style). Before a number is given out, the program checks the last number saved on the server and the numbers already used on this computer, so two people in the same branch never get the same number.

Stock locations

Each location is a place where stock is kept: a shop, a store room or a warehouse.

The first location in the list is marked **main**. Stock that has not been moved anywhere else is counted there. It cannot be removed.

In **Belongs to**, choose the branch that owns each location. A branch can own several locations (for example Kasoa Shop and Kasoa Warehouse). A location with no branch is **shared**.

To add a location, type its name in **New location** and click **+ Add location**.

To **rename** a location, change its name in the list and save. Products, documents, stock takes and transfers follow the new name.

This panel is the only place where locations are added, renamed or given to a branch. Types & Locations (section 3.4) and the Locations button on Stock Transfers show the same list and link here.

A branch sells only from its own locations: from its **Sells from** location, unless another of its locations is picked on the invoice or purchase. To move stock from one branch to another, use **Products > Stock Transfers** (section 8.3).

Business units

A business unit is a line of business: a part of the company whose income and costs you want to see separately, for example D01 Design, D02 Digital Printing, D03 Large Format and D04 Branding in a printing company, or Kitchen, Bar and Catering in a restaurant. (Earlier versions called them departments. The staff **Department** in Payroll is a different list and keeps its name, chapter 11.)

1. Click **+ Add business unit**.
2. Type a short **Code** (for example D01) and the **Business unit** name.
3. Tick **Shared** on the one unit that holds administration and overheads (usually D00 Administration). **No shared business unit** clears the tick.
4. Click **Save branches and business units**.

Choosing a business type (section 3.9) adds its business units for you; you can rename them here.

How lines get their business unit. In the Chart of Accounts, each income and cost account can have a **Business unit** (section 3.7). Every line posted to that account goes to that unit, so an invoice for a logo design and business cards splits by itself between Design and Digital Printing. Lines on accounts with no business unit, or with the shared one (debtors, VAT, rent and so on), take the business unit picked on the form.

Sharing out overheads. Under **Sharing out overheads**, choose how the shared unit's costs are shown in the Business Unit Profit report (section 10.1):

Don't share them out: overheads are shown on their own line.

By each business unit's share of revenue.

By fixed percentages: type a percentage for each unit; they should add up to 100.

This choice changes the report only. The ledger is not changed.

Branches still on employees. If employees still carry branches from the old payroll list that this list doesn't have, a note shows them with an **Add them here** button. Press Save afterwards.

Rules the program checks when you save

Two branches cannot have the same name or the same code.

Two business units cannot have the same name.

A branch cannot sell from a location that belongs to another branch, and two branches cannot sell from the same location.

You must keep at least one stock location.

If you remove a branch, the program asks you to confirm. Documents already entered there keep their branch tag.

What happens once branches are set up

Every document and every ledger line is tagged with the branch it was entered in, and with its business unit (from the account, or the one chosen on the form).

Renaming a branch or business unit carries back: past documents and reports show the new name, and their figures stay together under it.

People who work in more than one branch see a **Branch** box at the top of the screen and switch between their branches there. Someone with one branch sees a small badge with the branch name instead. The program remembers the last branch chosen on each computer.

Reports built from the ledger (Trial Balance, Profit & Loss, Balance Sheet and the others) can be run for one branch or one business unit (section 10).

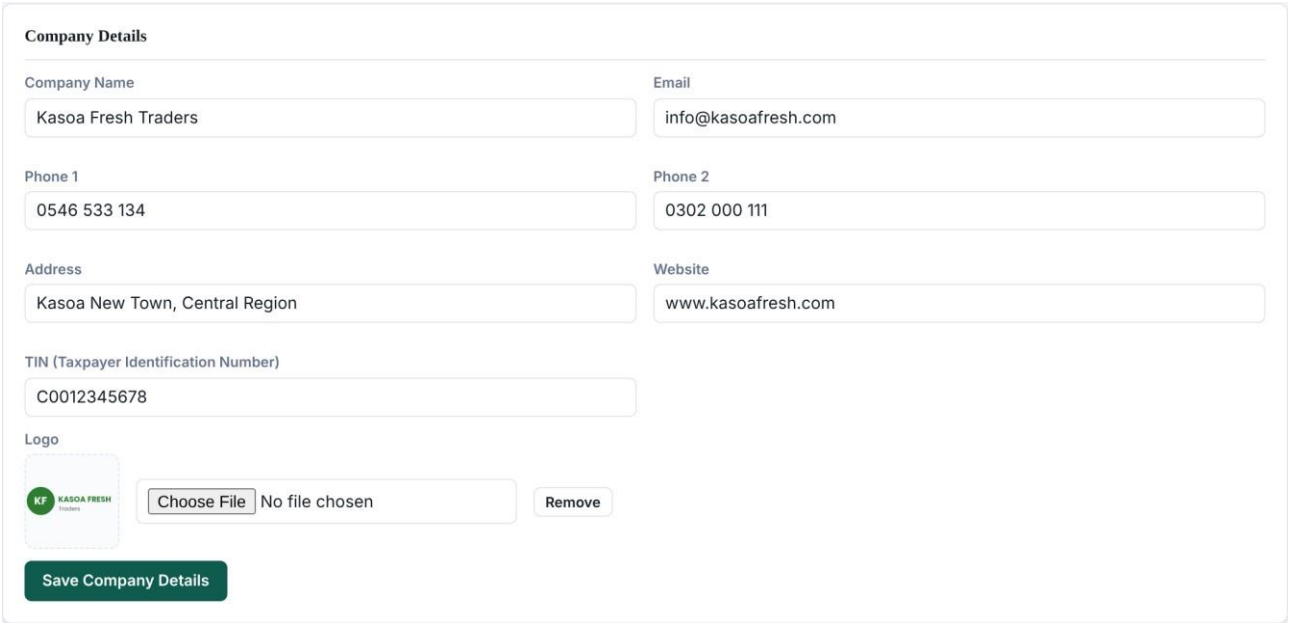

Who may see which branch is set in User Rights (section 4.4).

The branch box at the top of the screen

Important: Limits to know: a report for one branch includes that branch's opening balances only if they were entered by branch (section 3.8). A report for one business unit has no opening balances. Business units are tagged from the day they are set up: lines posted before an account got its business unit keep the tag they had. Payroll salaries are charged to each employee's **Salary charged to (business unit)** (section 11.4).

Company details and logo

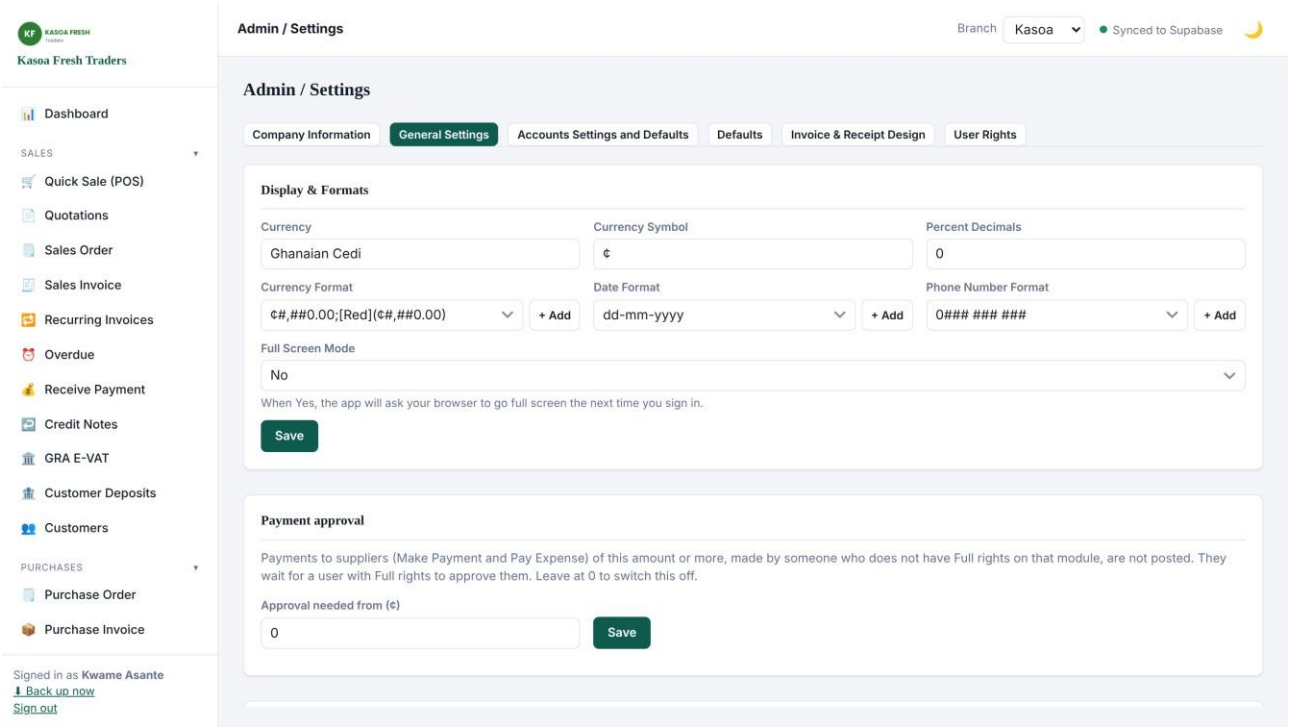

Company details

1. Fill in **Company Name, Email, Phone 1, Phone 2, Address** and **Website**. They print on invoices, receipts, statements and report letterheads.
2. Enter your **TIN (Taxpayer Identification Number)**. GRA requires it on every tax invoice, and the program reminds you if it is blank when you raise an invoice.
3. Under **Logo**, click **Choose File** and pick your logo. The picture must be smaller than 400 KB. It appears at the top left of the menu and on printed documents. **Remove** takes it off.
4. Click **Save Company Details**.

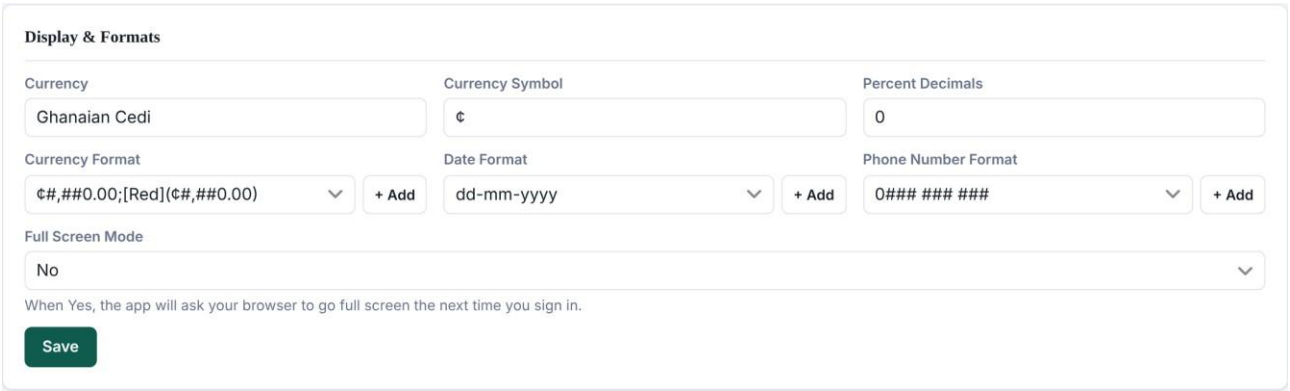

3.3 General Settings tab

General Settings holds company-wide choices and tools, in panels from top to bottom. Each panel has its own Save button; nothing changes until you click it.

General Settings

Display & Formats

Display & Formats

Currency and **Currency Symbol**: Ghanaian Cedi and ¢.

Percent Decimals: how many decimal places percentages show.

Currency Format: how amounts look. ¢#,##0.00;[Red](¢#,##0.00) shows ¢1,250.00, and a negative amount in red brackets. A format with brackets makes negative amounts show in brackets everywhere.

Date Format: dd-mm-yyyy (the Ghana standard), mm-dd-yyyy, yyyy-mm-dd or dd/mm/yyyy. Dates on screens, printouts and exports follow it.

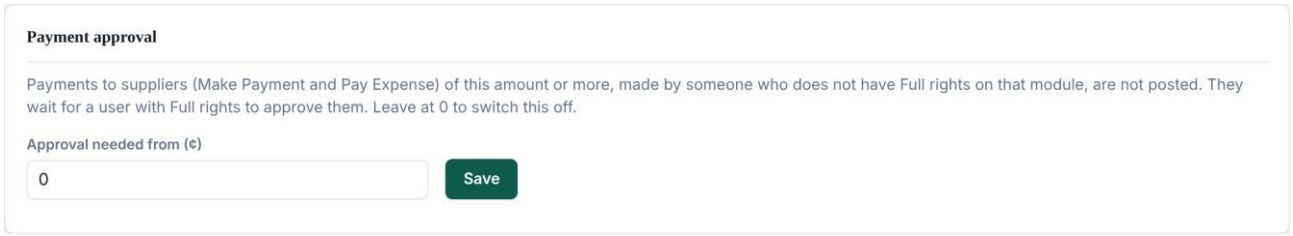

Phone Number Format: for example 0### ### ###. Each # is a digit.

+ Add beside a format lets you type a new one, which is then added to the list and selected.

Full Screen Mode: Yes asks the browser to go full screen the next time you sign in.

Click **Save**.

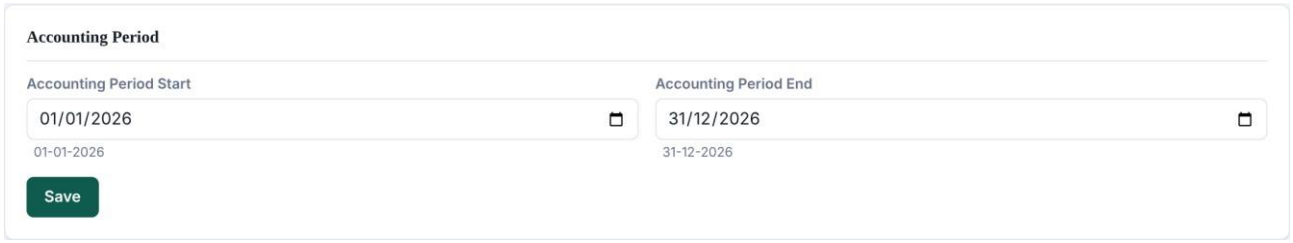

Payment approval

Payment approval

Enter an amount in **Approval needed from (¢)**. A supplier payment (Make Payment or Pay Expense) of that amount or more, made by someone who does not have Full rights on that module, is not posted. It waits until a user with Full rights approves it (section 7.3). Leave it at 0 to switch approval off.

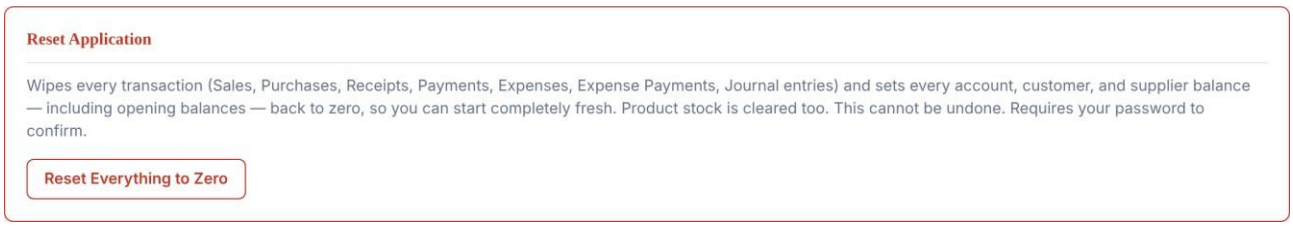

Accounting Period

Accounting Period

Enter the **Accounting Period Start** and **End**, normally 01-01 to 31-12. Reports use it as their starting dates, the withholding tax year follows it, and the Close Year date suggests its end date.

Reset Application

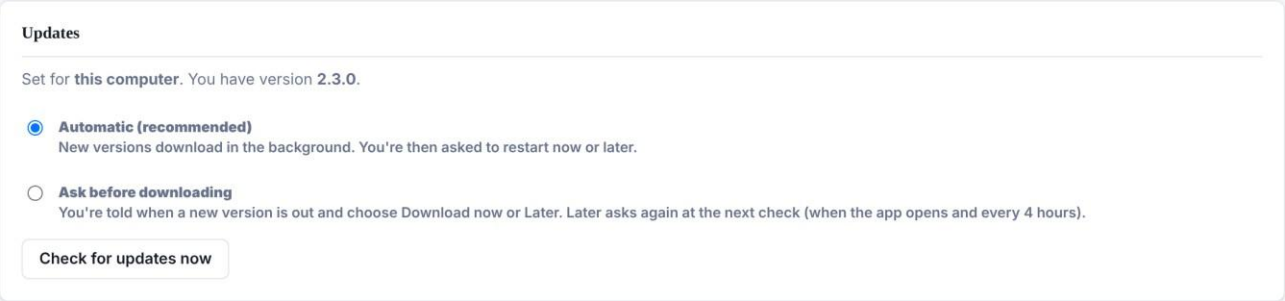

Reset Application

Reset Everything to Zero wipes the transactions (sales, purchases, receipts, payments, expenses, expense payments, journals, orders, quotations, stock takes, credit notes, recurring documents and budgets) and the ledger, sets every account, customer, supplier and opening balance to zero, clears product stock, starts document numbers again at 1 and marks pay runs as not posted. Customers, suppliers, products, accounts, employees and settings are kept.

You must type your password, and then confirm a second time. **This cannot be undone.** Make a backup first. It is meant for clearing practice entries before you start for real, not for everyday use.

Updates (desktop app)

Updates

This panel shows on Windows, Mac and Linux. It is set for **this computer** and shows the version you have.

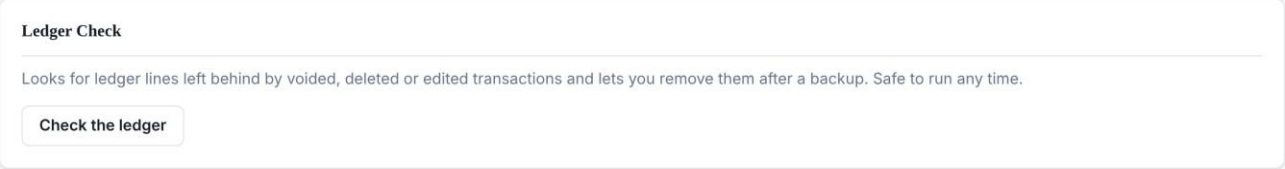

Automatic (recommended): new versions download in the background. You are then asked to restart now or later.

Ask before downloading: you are told when a new version is out and choose Download now or Later. Later asks again at the next check (when the app opens and every 4 hours).

Check for updates now checks straight away.

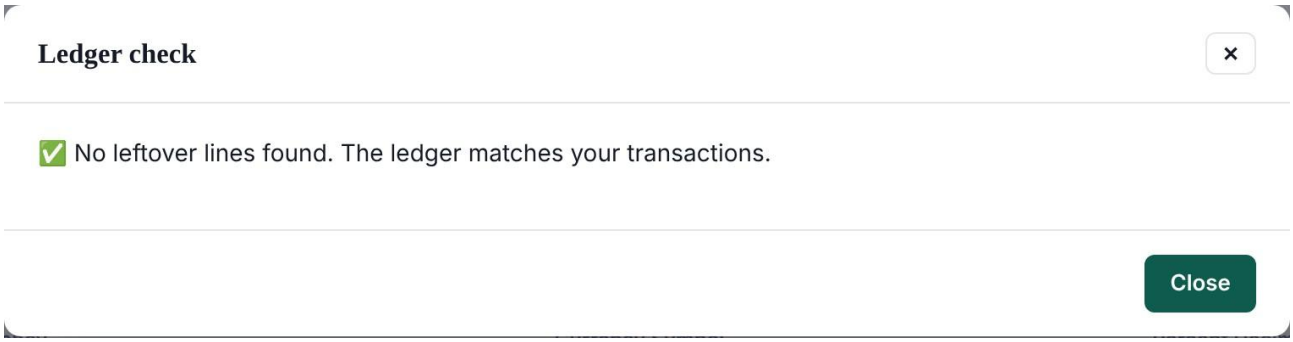

Only an administrator can change the setting. On a Mac, Download opens the download page; install the new version over the old one. On an Android phone a smaller **Updates** panel shows your version and a **Check for updates now** button; the app also checks once a day.

Ledger Check

Ledger Check

Check the ledger looks for ledger lines left behind by voided, deleted or edited transactions. If it finds none, it says the ledger matches your transactions.

A clean ledger check

If it finds some, it lists them with the balances that would change (now and after the fix) and the reason for each line (the transaction was voided or deleted, or it is an older version of an edited transaction). **Export list** saves the list. **Back up, then remove** makes a full backup first and then removes only those extra lines; your invoices, receipts and other documents are not touched, and the fix is recorded in the Audit Log. Only an administrator can run it. It is safe to run at any time, for example before the month-end reports.

About

About

Shows the version number and copyright. **Read the licence terms** opens the full licence terms, the same ones shown in the installer and on the sign-in screen.

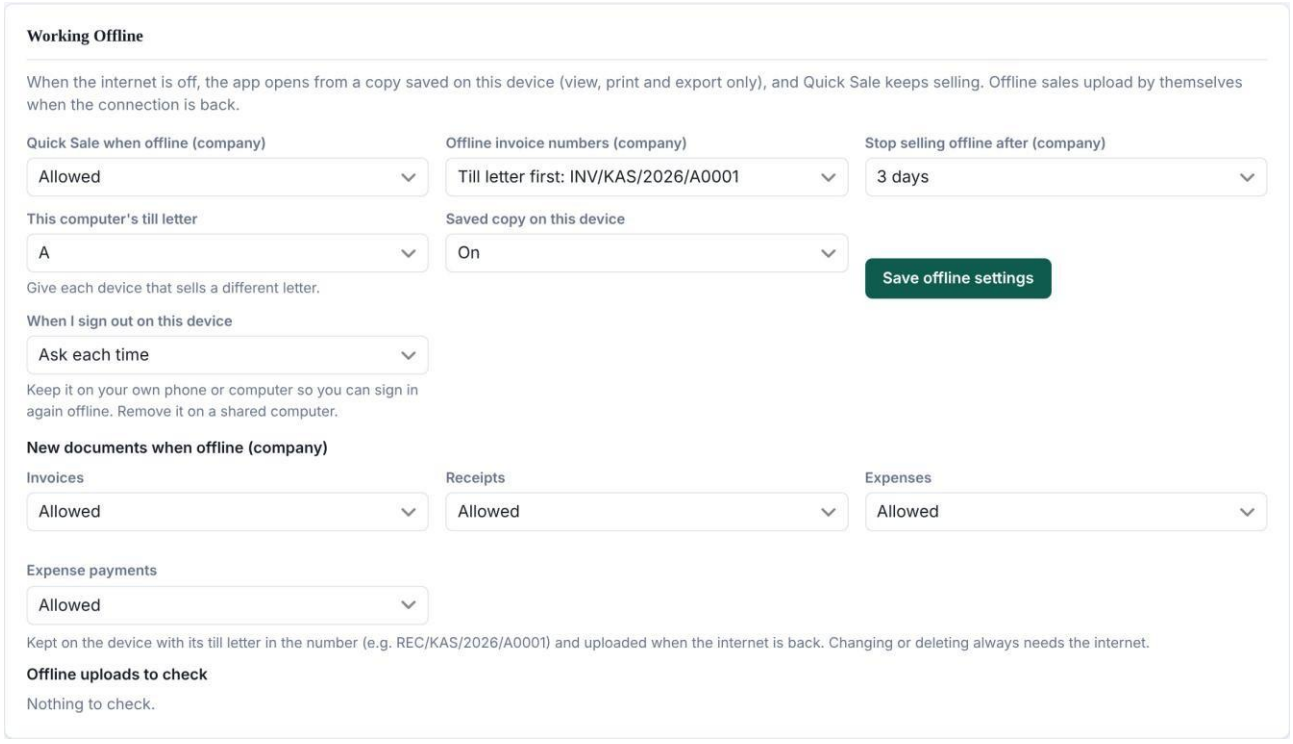

Large companies

Large companies

For companies with more than 20,000 ledger lines. With **Automatic (fast opening for long histories)**, the app opens with this year and last year in full and totals brought forward for earlier years, then loads the earlier years in the background. Balances and reports are exactly the same. Screens that need the older history (reports, ledgers, statements and bank reconciliation) wait until it has loaded. **Always load everything** turns this off. The panel also shows how many ledger lines the company has. The change applies the next time the company is opened.

Working Offline

Working Offline

When the internet goes off, the app opens from a copy saved on the device, and you can keep selling and recording (section 2.8). The settings marked (company) apply to every device; the others are for this device only. Only an administrator can change them.

Quick Sale when offline (company): Allowed or Not allowed.

Offline invoice numbers (company): where the till letter goes, first (INV/KAS/2026/A0001) or last.

Stop selling offline after (company): No limit, or 1, 2, 3, 7, 14 or 30 days without a connection.

This computer's till letter: give each device that sells a different letter (A, B, C and so on). With no letter, the device cannot sell offline. Letters already used in your invoices are listed under the box.

Saved copy on this device: On, or Off for a shared computer (switching it off removes the saved copy).

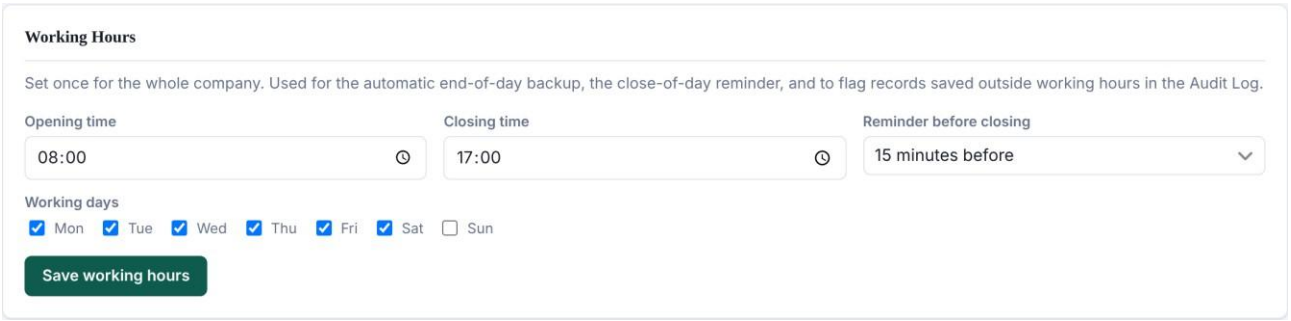

When I sign out on this device: Ask each time, Keep the saved copy, or Remove the saved copy.

New documents when offline (company): Allowed or Not allowed for each of Invoices, Receipts, Expenses and Expense payments. They are kept on the device with the till letter in the number and uploaded when the internet is back. Changing or deleting always needs the internet.

Offline uploads to check: anything that could not upload, or that would overpay an invoice, is listed here for an administrator to sort out.

Click **Save offline settings**.

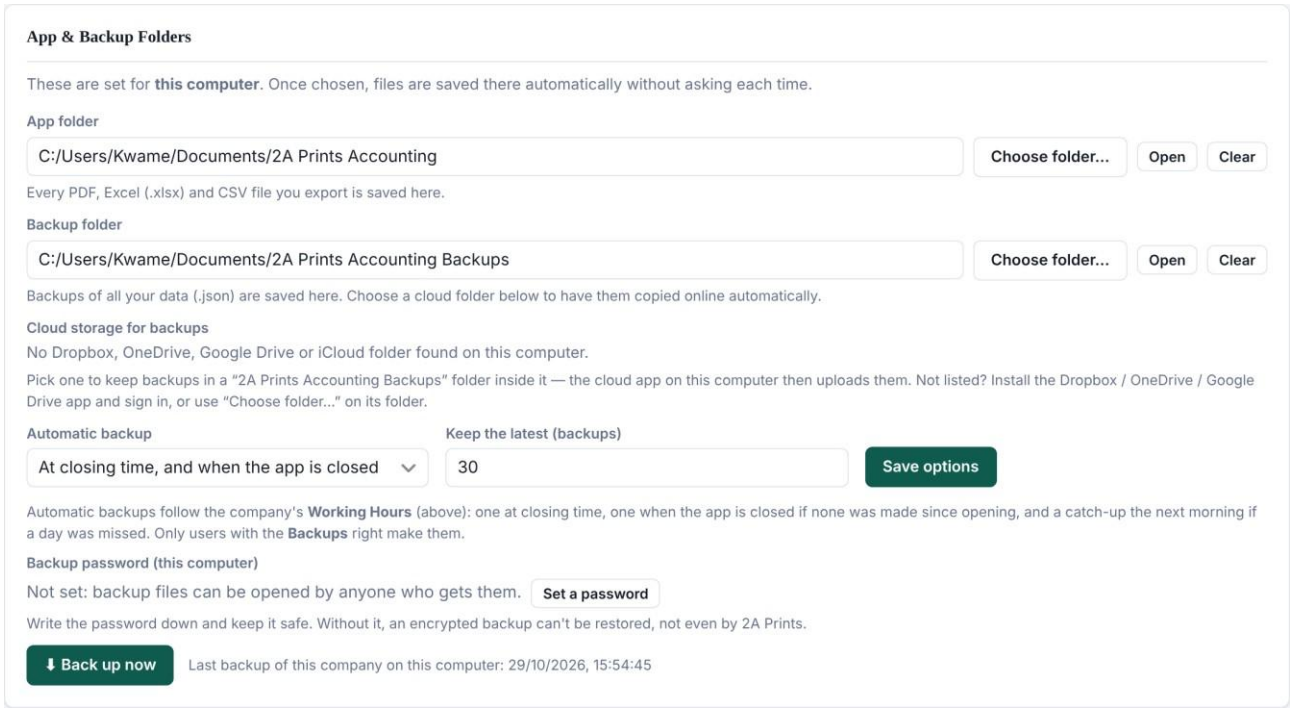

Working Hours

Working Hours

Set the **Opening time**, **Closing time**, a **Reminder before closing** (none, or 10, 15, 30 or 60 minutes) and tick the **Working days**. The working hours are used for the automatic end-of-day backup, the close-of-day reminder, and to flag records saved outside working hours in the Audit Log. Closing time must be after opening time, and at least one day must be ticked. Click **Save working hours**.

App & Backup Folders (desktop app)

App & Backup Folders

These are set for **this computer**. In a web browser this panel only explains that files go to your Downloads folder.

App folder: every PDF, Excel and CSV file you export is saved here without asking. Choose folder… picks it; **Open** opens it; **Clear** goes back to asking each time.

Backup folder: backups of all your data are saved here.

Cloud storage for backups: if Dropbox, OneDrive, Google Drive or iCloud is installed on the computer, a button appears for each. Click one to keep backups in a "2A FlowBooks Backups" folder inside it, so they are copied online.

Automatic backup: Off, or At closing time, and when the app is closed. The program makes one backup at closing time, one when the app is closed if none was made since opening, and a catch-up the next morning if a working day was missed (for example after a power cut). Only users with the Backups right make them.

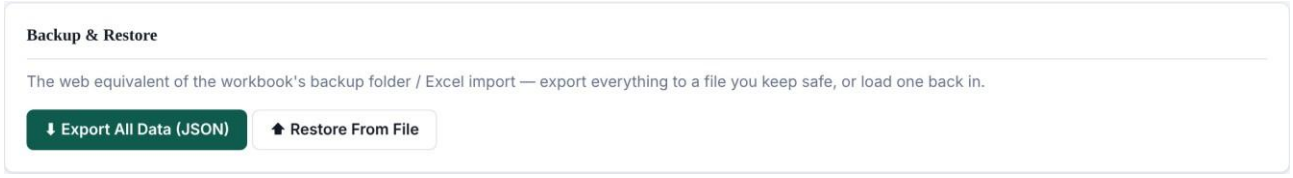

Keep the latest (backups): how many backup files to keep (1 to 365, 30 by default). Older ones are deleted.

Backup password (this computer): Set a password (at least 8 characters, typed twice) encrypts every new backup made on this computer. **Change password** and **Remove** are there too. Write the password down and keep it safe: without it an encrypted backup cannot be restored, not even by 2A Prints.

Back up now makes a backup straight away and shows when the last one was made.

Click **Save options** after changing the automatic backup or how many to keep.

Backup & Restore

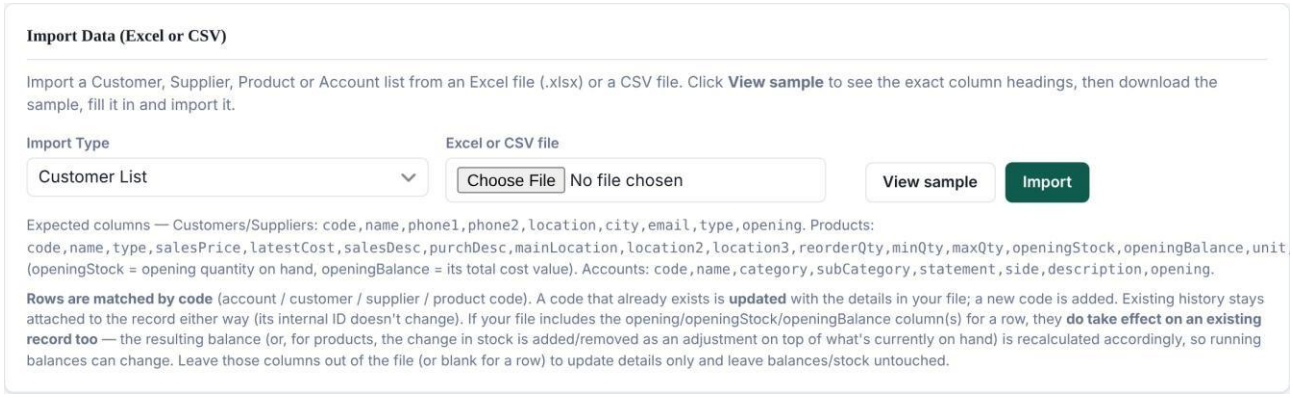

Backup & Restore

Export All Data (JSON) saves a full copy of the company (all records and settings) to a file. On the desktop it goes to the Backup folder and is encrypted if a backup password is set.

Restore From File loads a backup back in. It needs the Backups right. The program shows when the backup was made and compares its contents with what you have now. Restoring **replaces everything** in this company. A safety copy of your current data is saved first, and you must type RESTORE to confirm. If the backup has a password, you are asked for it. If the connection drops during a restore, it stops, tells you, and leaves your settings unchanged.

Important: Restore replaces the whole company with the backup. Use it only to recover from a serious mistake or a lost computer, and only with a backup you are sure about.

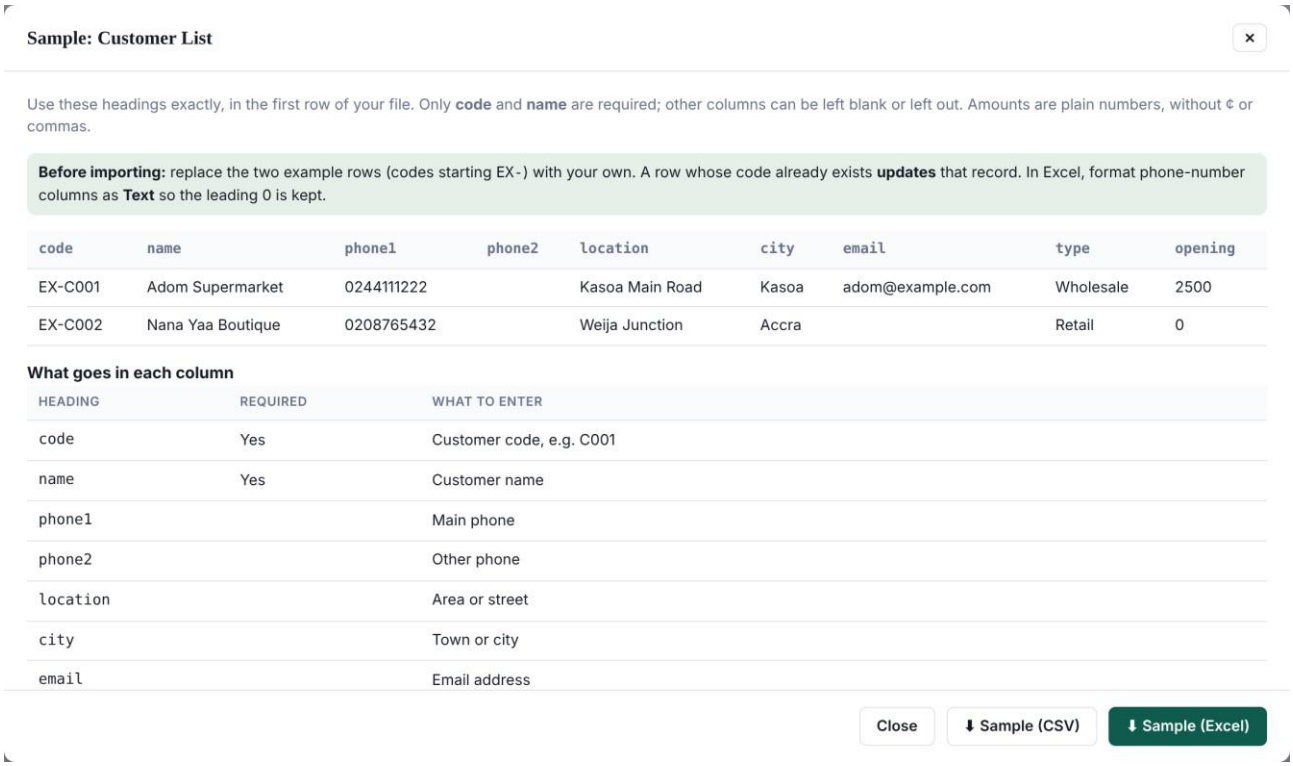

Import Data (Excel or CSV)

Import Data

Bring in a Customer, Supplier, Product or Account list from Excel (.xlsx) or CSV.

1. Choose the **Import Type**.
2. Click **View sample** to see the exact column headings. You can download the sample, fill it in and import it.
3. Choose your file under **Excel or CSV file** and click **Import**.

A sample import file

Rows are matched by code. A code that already exists is **updated** with the details in your file, and a new code is added. History stays attached to the record either way. If your file includes opening balance columns for an existing record, they do take effect: the balance is worked out again, and for products the change in stock is posted as an adjustment. Leave those columns out (or blank) if you only want to update details.

For account lists, the program reads charts from other software: types such as Revenue, Inventory Asset, Contra Asset, Equity, Finance Cost, Other Expense and Income Tax Expense are changed into the types the reports read, header rows become group headings, and any row it cannot use is listed and left out, so nothing goes missing from your Profit & Loss or Balance Sheet without you knowing.

Bulk Price Update

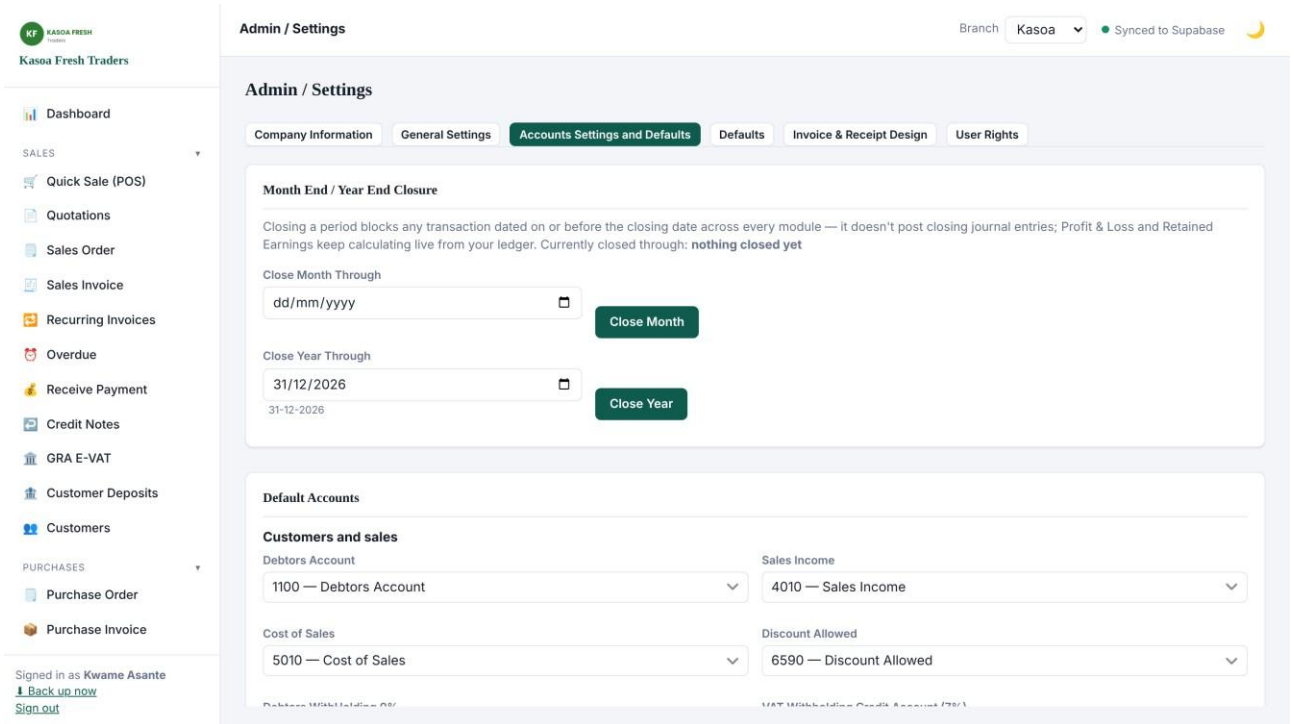

Bulk Price Update

Change many product prices at once. The file needs the columns **code** and **salesPrice**, and optionally **latestCost**. Products are matched by product code; codes that do not match are skipped. Click **View sample**, fill in the file, choose it and click **Update Prices**.

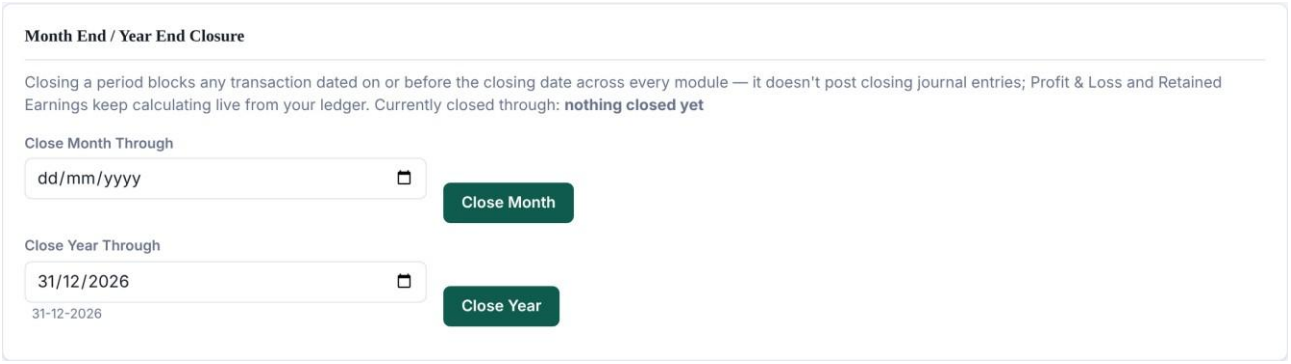

3.4 Accounts Settings and Defaults tab

This tab controls how the program posts to the ledger. It needs the **Accounting settings** right. Change it with your accountant.

Accounts Settings and Defaults

Month End / Year End Closure

Month End / Year End Closure

Closing a period blocks every transaction dated on or before the closing date, in every module: nobody can post, edit or delete in that range. It does not post closing journal entries; Profit & Loss and Retained Earnings keep calculating from your ledger.

Close Month Through: pick the last day of the month and click **Close Month**.

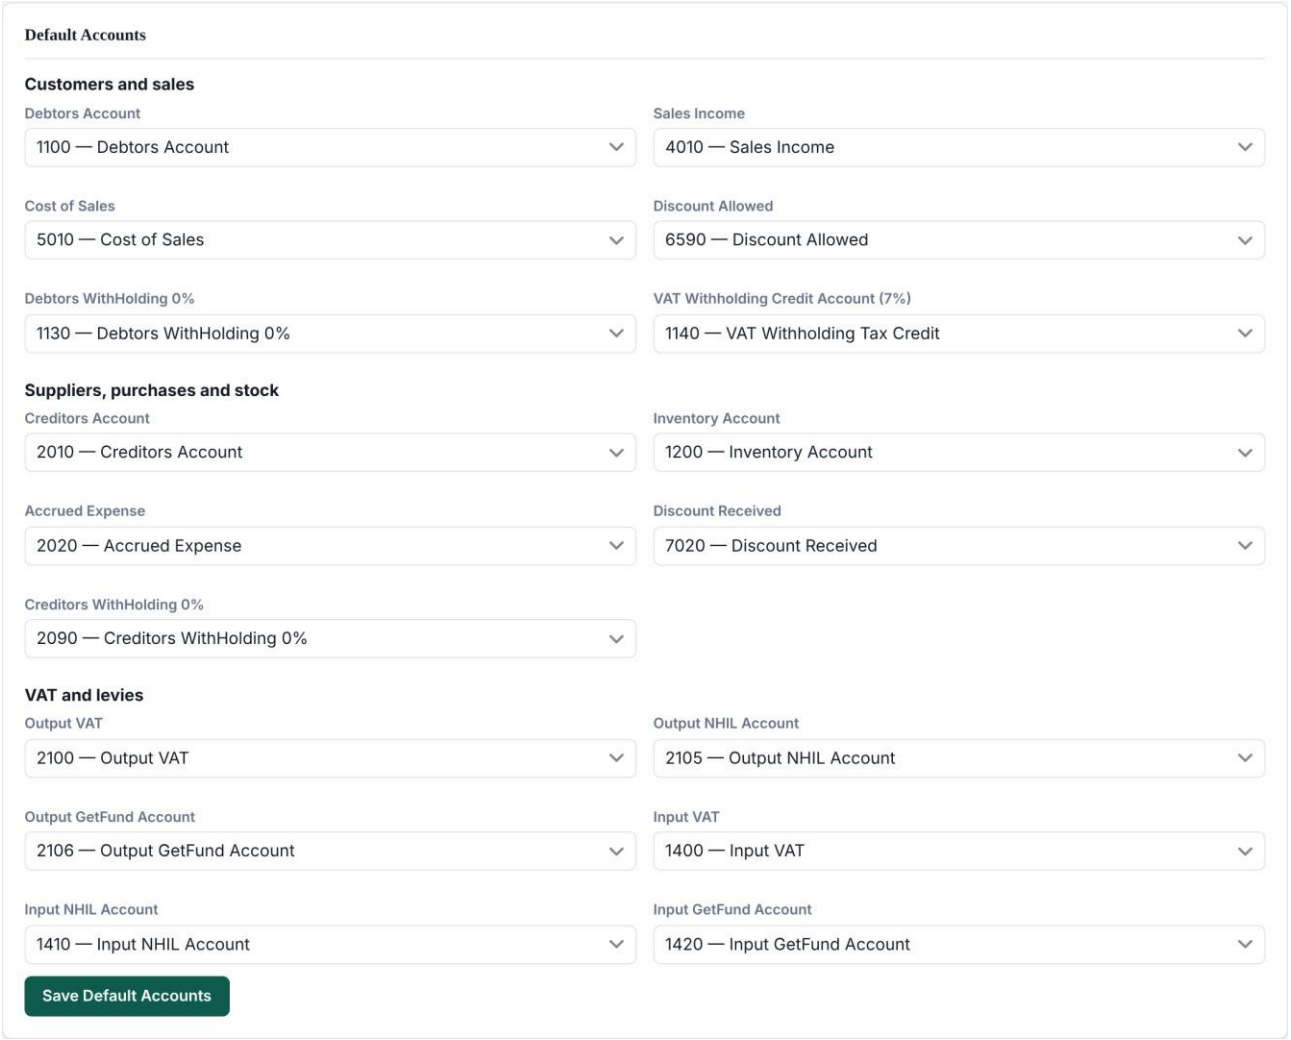

Close Year Through: suggests the end of your accounting period; click **Close Year**.

The panel shows what is **Currently closed through**.

Reopen (clear closure) removes the closure, for example to correct a mistake found after closing.

The program asks you to confirm each closure.

Default Accounts

Default Accounts

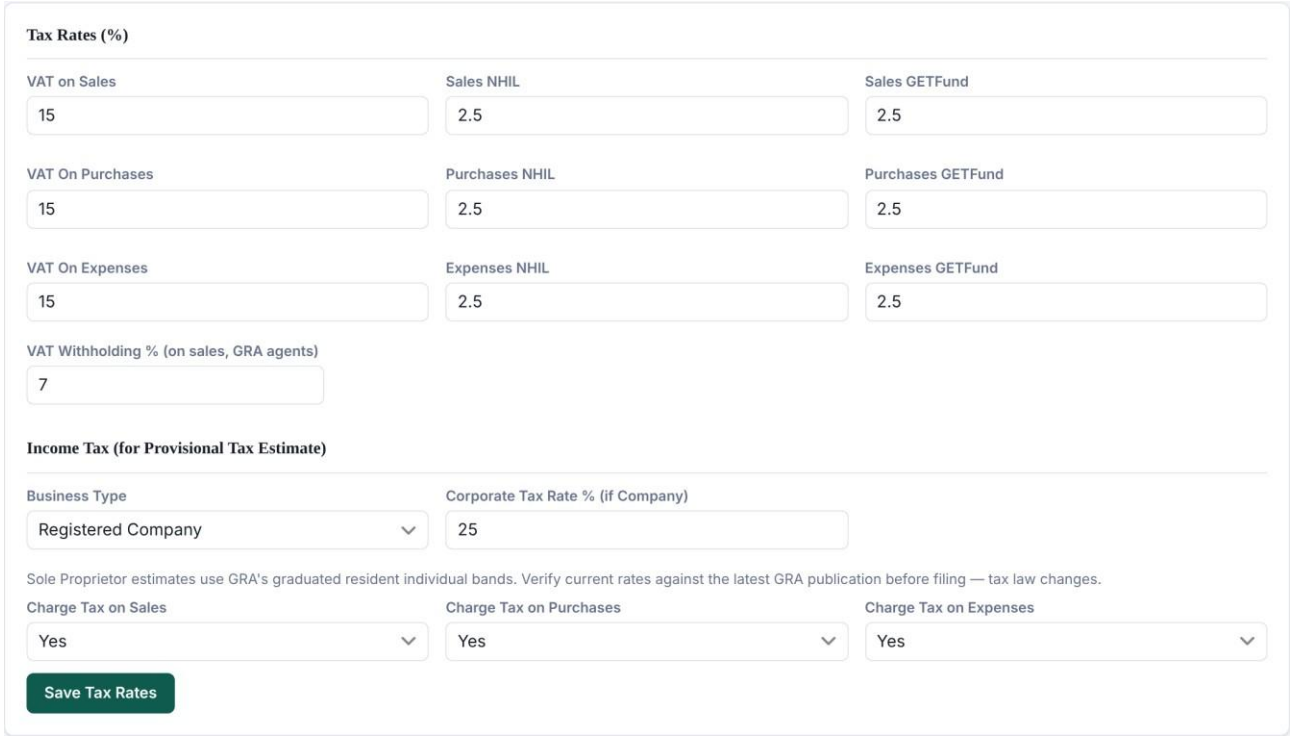

These are the accounts the program posts to automatically. They are grouped in three parts:

Group	Box	Used for
Customers and sales	Debtors Account	What customers owe on credit sales
	Sales Income	Sales of products that have no sales account of their own
	Cost of Sales	The cost of stock sold
	Discount Allowed	Discounts you give customers
	Debtors WithHolding 0%	Withholding tax customers deduct when the rate is 0% (the other rates are in the presets below)
	VAT Withholding Credit Account (7%)	VAT withheld by GRA-appointed agents who pay you
Suppliers, purchases and stock	Creditors Account	What you owe suppliers of stock
	Inventory Account	The value of stock on hand (also used by purchases)
	Accrued Expense	What you owe expense suppliers
	Discount Received	Discounts suppliers give you
	Creditors WithHolding 0%	Withholding tax on supplier payments at 0%
VAT and levies	Output VAT, Output NHIL, Output GETFund	Tax charged on your sales
	Input VAT, Input NHIL, Input GETFund	Tax paid on your purchases and expenses that you can claim

A new company is already linked to the right accounts. Change them only if your accountant has changed the chart. Click **Save Default Accounts**.

> **Tip:** The Output and Input VAT, NHIL and GETFund accounts are your VAT control accounts. When you pay VAT to GRA, post the payment to these accounts (section 10.5), not to a separate "VAT control" account.

Tax Rates and Income Tax

Tax Rates (%) for sales, purchases and expenses: VAT 15, NHIL 2.5 and GETFund 2.5. The COVID-19 levy has been abolished and is no longer charged; it still shows on old documents that had it.

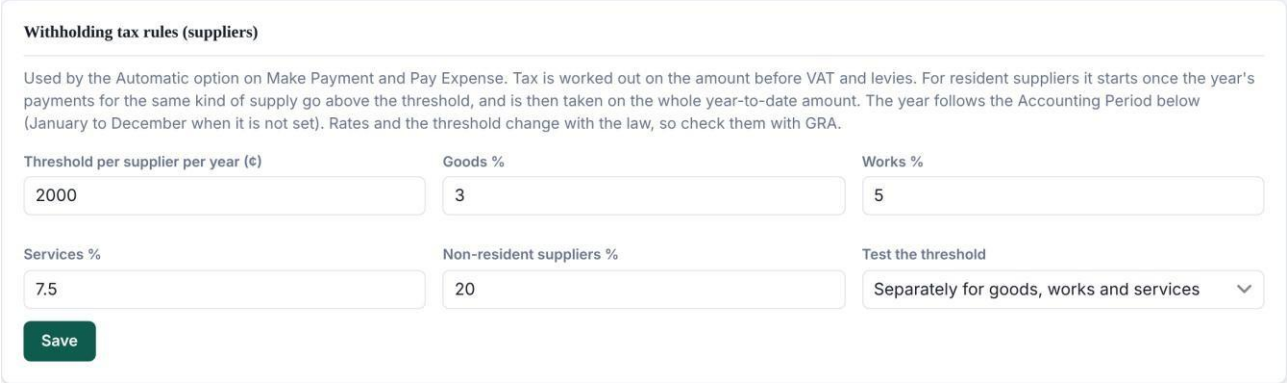

VAT Withholding % (on sales, GRA agents): 7 by default.

Income Tax (for Provisional Tax Estimate): choose Registered Company (with the **Corporate Tax Rate %**, 25 by default) or Sole Proprietor / Individual (worked out on GRA's graduated resident bands). Check the rates against the latest GRA publication before filing.

Charge Tax on Sales, Purchases, Expenses: Yes or No. With Yes, each document of that kind has a **Charge VAT & levies** tick box (ticked to start with) so one document can be left without tax. With No, VAT and levies are never charged on that kind of document and the tick box is hidden.

Click **Save Tax Rates**.

Withholding tax rules (suppliers)

Withholding tax rules

Used by the Automatic option on Make Payment and Pay Expense, and on cash purchases and cash expenses (section 7.8).

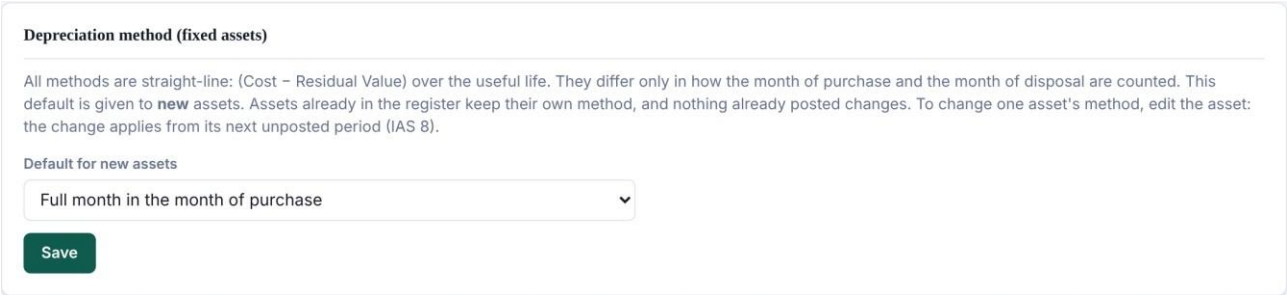

Threshold per supplier per year: ¢2,000.

Goods % 3, **Works %** 5, **Services %** 7.5, **Non-resident suppliers %** 20.

Test the threshold: Separately for goods, works and services, or On all supplies to a supplier together.

Tax is worked out on the amount before VAT and levies. The year follows the Accounting Period. If you enter a rate that has no matching creditors preset (below), the program warns you to add one so the rate can be posted. Click **Save**.

Depreciation method (fixed assets)

Depreciation method

All methods are straight line: (cost minus residual value) over the useful life. They differ only in how the month of purchase and the month of disposal are counted:

Full month in the month of purchase (the default for new assets).

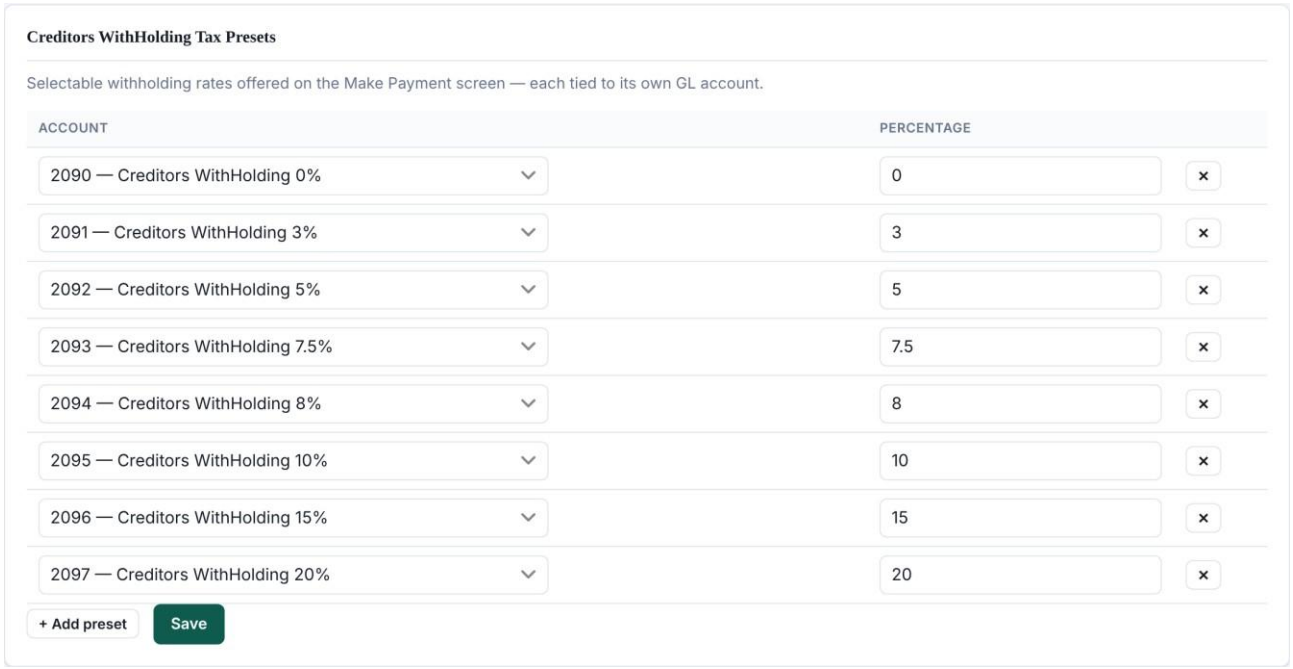

Mid-month: half a month at the start and at the end.

Daily: by the days the asset is held.

Whole months, starting the month after purchase (the older method; assets that already use it keep it).

This default is given to **new** assets only. Assets already in the register keep their own method, and nothing already posted changes. To change one asset's method, edit the asset (section 9.4). Automatic month-end depreciation is switched on in Fixed Assets, not here.

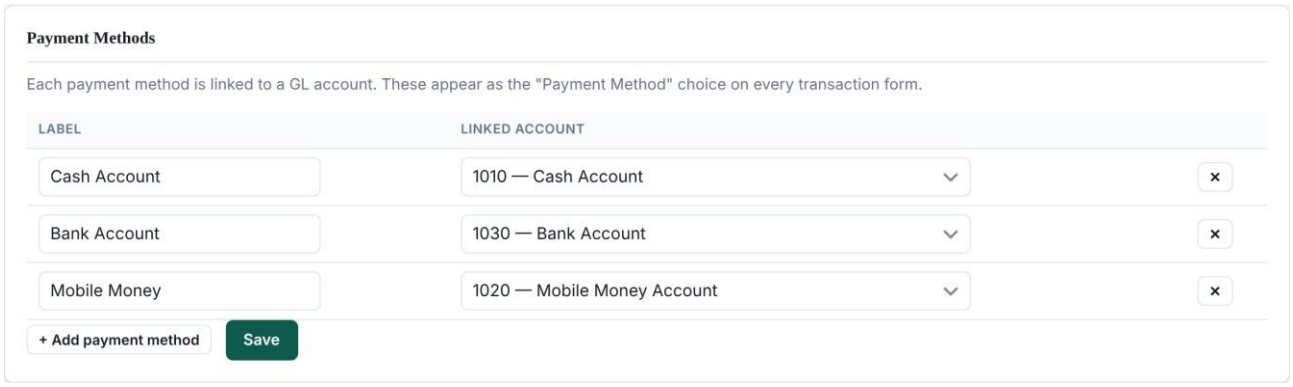

Debtors and Creditors WithHolding Tax Presets

Creditors WithHolding Tax Presets

The rates offered in the WithHolding Tax list on **Receive Payment** (debtors) and **Make Payment** and **Pay Expense** (creditors), each tied to its own account. A new company has 0, 3, 5, 7.5, 8, 10, 15 and 20%. **+ Add preset** adds a rate (up to 10), ✕ removes one, and **Save** keeps the list.

Payment Methods

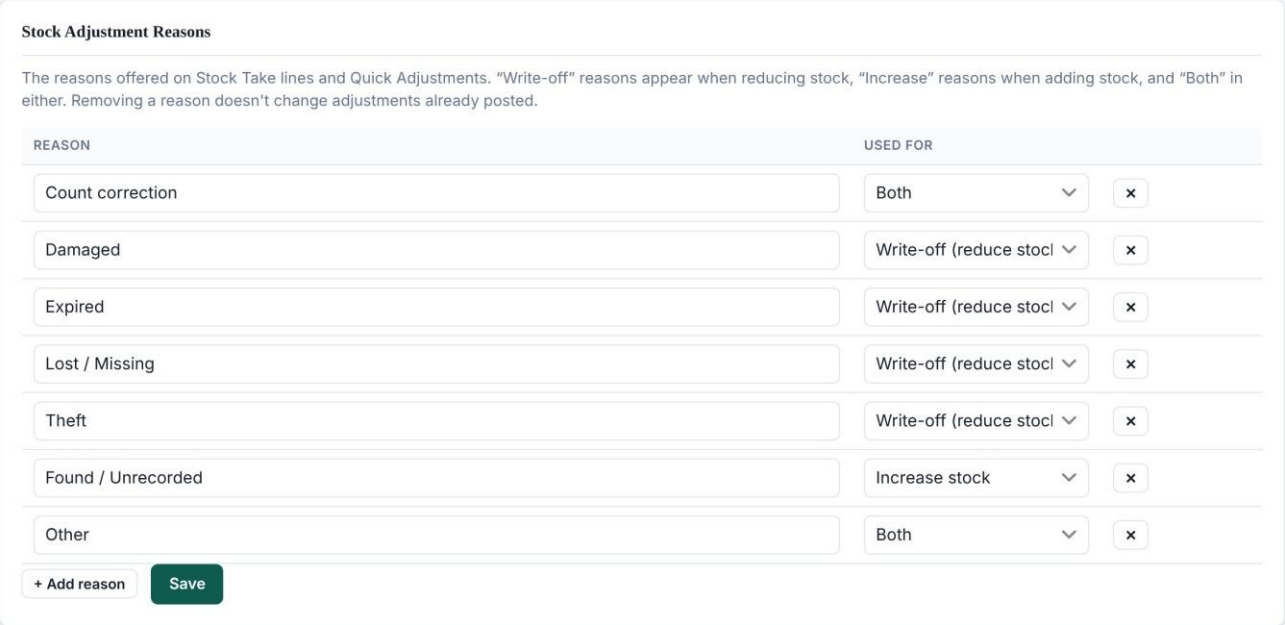

Payment Methods

Each payment method has a **Label** and a **Linked Account**. They appear as the Payment Method choice on every form that receives or pays money. A new company has Cash Account and Bank Account. Add one for each way you take or pay money, for example **Mobile Money** linked to the Mobile Money Account, or a second bank account. Every account used as a payment method counts as **cash and cash equivalent** on the dashboard and in the Cash Flow statement. Keep at least one. Click **Save**.

> **Tip:** The note on the account form still says payment methods are under "Admin > Defaults". They are on this tab, Accounts Settings and Defaults.

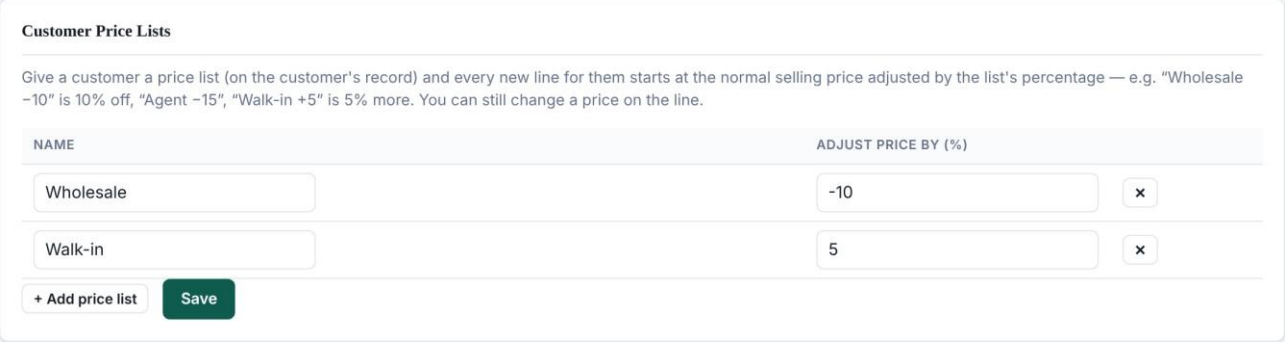

Stock Adjustment Reasons

Stock Adjustment Reasons

The reasons offered on Stock Take lines and Quick Adjustments. Each reason is used for **Write-off (reduce stock)**, **Increase stock**, or **Both**. A new company has Count correction, Damaged, Expired, Lost / Missing, Theft, Found / Unrecorded and Other. Removing a reason does not change adjustments already posted. Click **Save**.

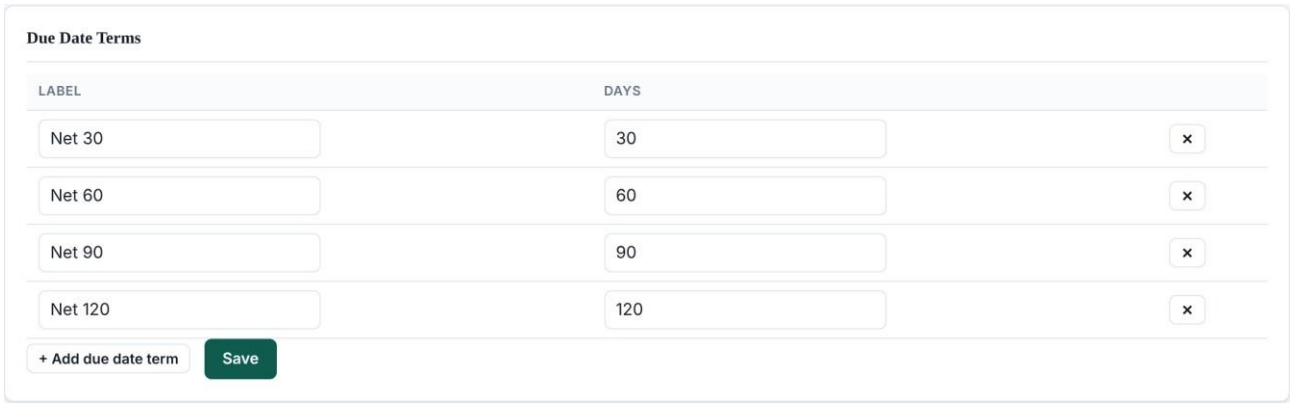

Customer Price Lists

Customer Price Lists

A price list adjusts the normal selling price by a percentage for the customers who have it, for example **Wholesale -10** (10% off) or **Walk-in +5** (5% more). Give a customer a price list on the customer's record (section 5.1). Every new line for that customer then starts at the adjusted price, which you can still change. Two price lists cannot have the same name.

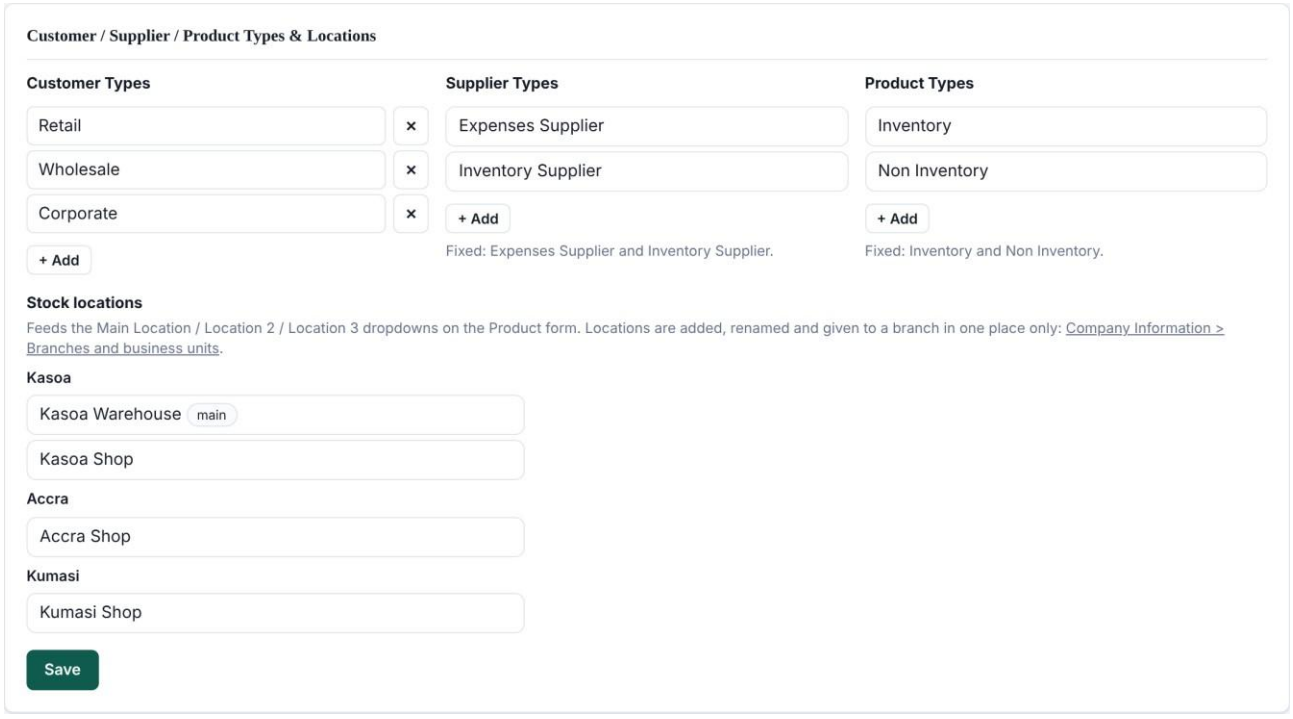

Due Date Terms

Due Date Terms

Each term has a **Label** and a number of **Days**: Net 30, Net 60, Net 90 and Net 120 to start with. Forms use them to work out the due date. Keep at least one.

Customer / Supplier / Product Types & Locations

Types and Locations

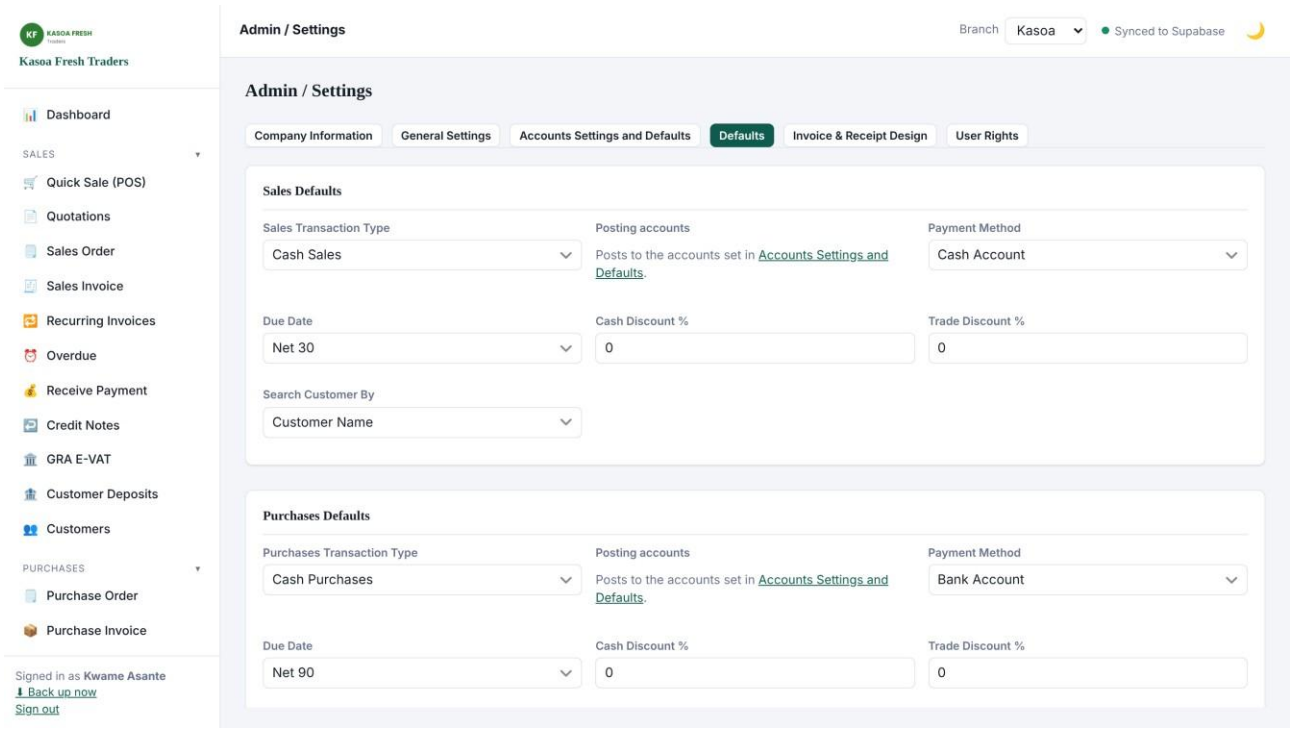

Customer Types: your own list (Retail, Wholesale and so on). Used to group and search customers.

Supplier Types are fixed: Expenses Supplier and Inventory Supplier. **Product Types** are fixed: Inventory and Non Inventory.

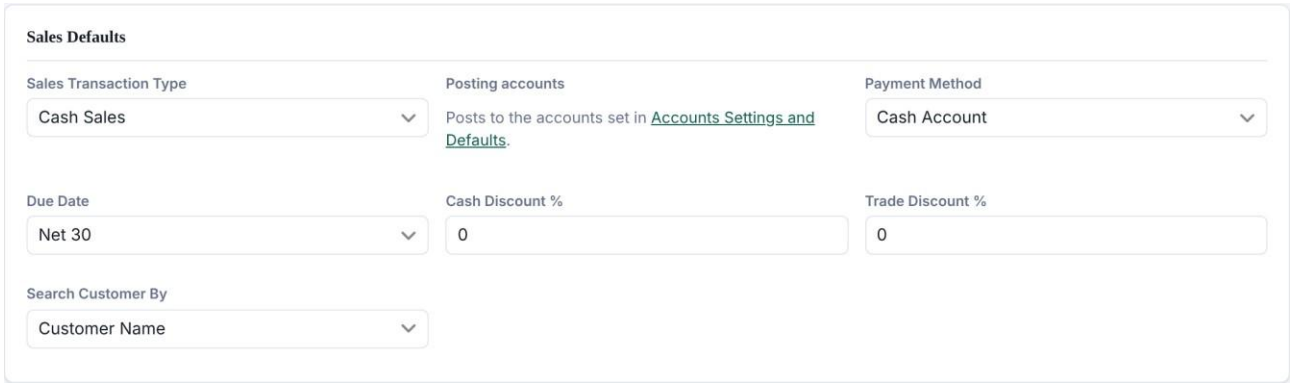

Stock locations: the list behind the Main Location, Location 2 and Location 3 boxes on the product form. It is shown here read-only, grouped by branch. The link takes you to Company Information > Branches and business units (section 3.2), the only place where locations are added, renamed or given to a branch.

3.5 Defaults tab

Defaults save typing: they are what a new document starts with. You can change any of them on the document itself. This tab needs the Accounting settings right.

Defaults

Sales defaults

For **Sales**, **Purchases** and **Expenses** there is the same set of boxes:

Transaction Type: Cash Sales or Credit Sales; Cash Purchases or Credit Purchases; Credit Expense or Cash Expense.

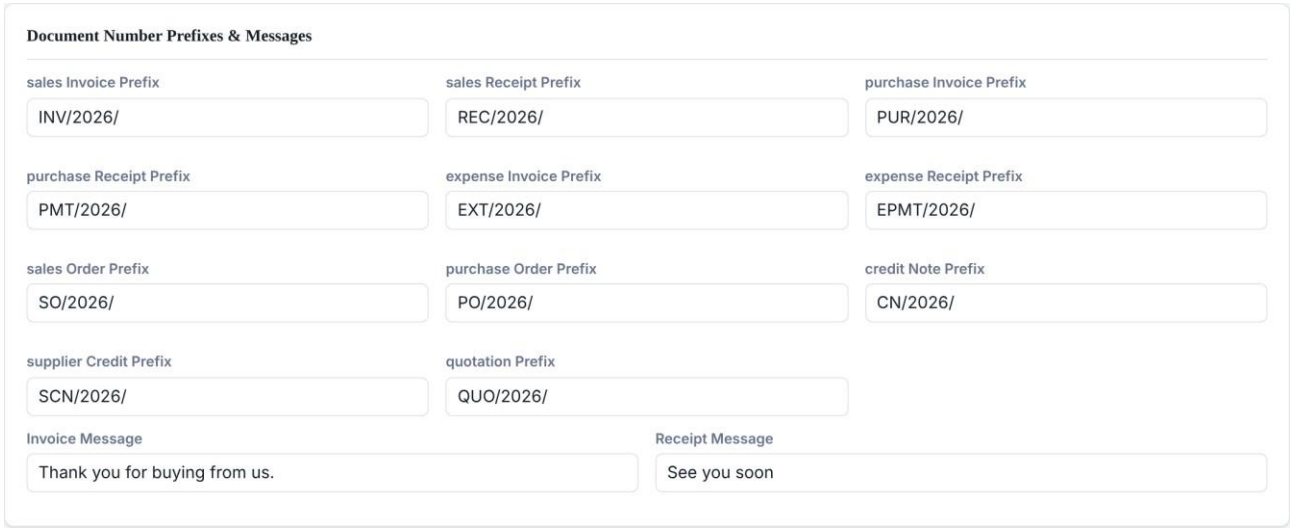

Posting accounts: the accounts come from Accounts Settings and Defaults (the link takes you there).

Payment Method: used for cash documents.

Due Date: one of your due date terms.

Cash Discount % and **Trade Discount %**.

Search Customer By or **Search Supplier By:** code or name.

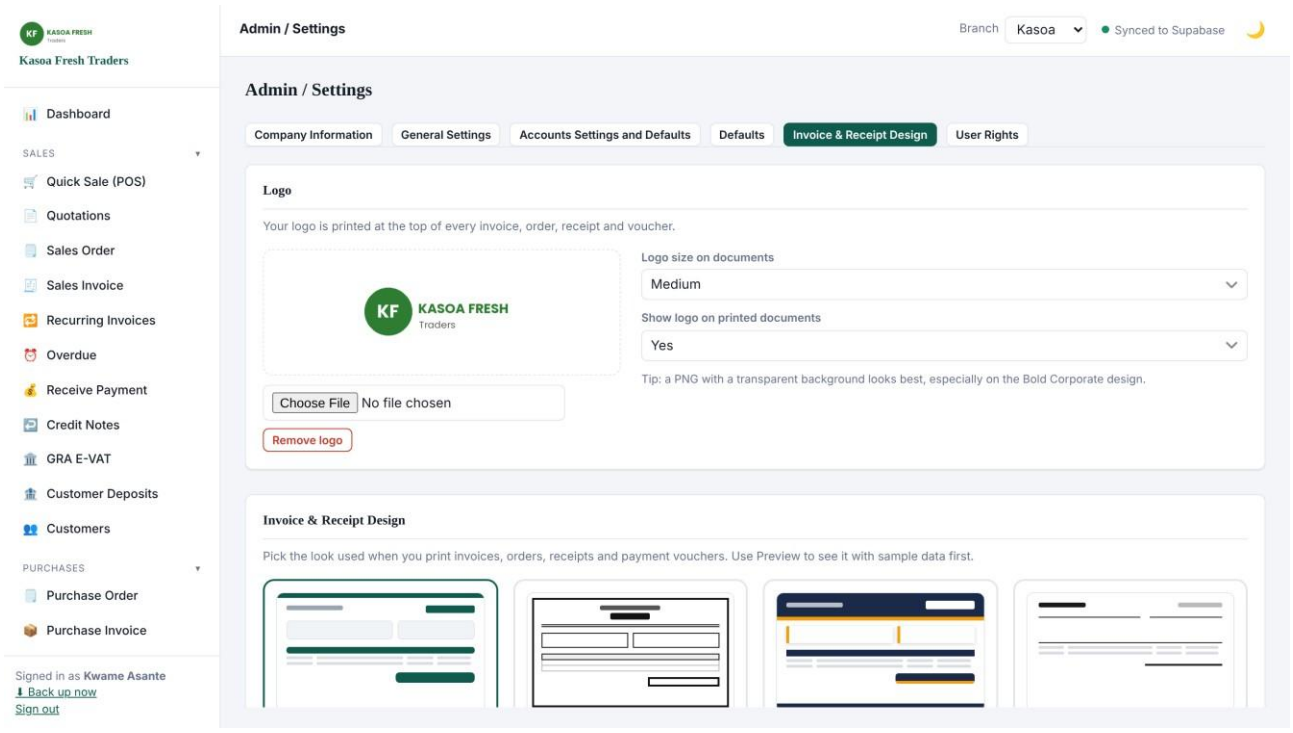

Document number prefixes and messages

Document Number Prefixes & Messages: the start of each document number, for example INV/2026/ for sales invoices, REC/2026/ for receipts, PUR/2026/ for purchases, PMT/2026/ for supplier payments, EXT/2026/ for expenses, EPMT/2026/ for expense payments, SO/2026/, PO/2026/, CN/2026/ for credit notes, SCN/2026/ for supplier credits and QUO/2026/ for quotations. Change the year in January if you want the new year in your numbers. The **Invoice Message** ("Thank you for buying from us.") and **Receipt Message** print at the bottom of those documents.

Default Record Types: the type a new customer, product and supplier starts with.

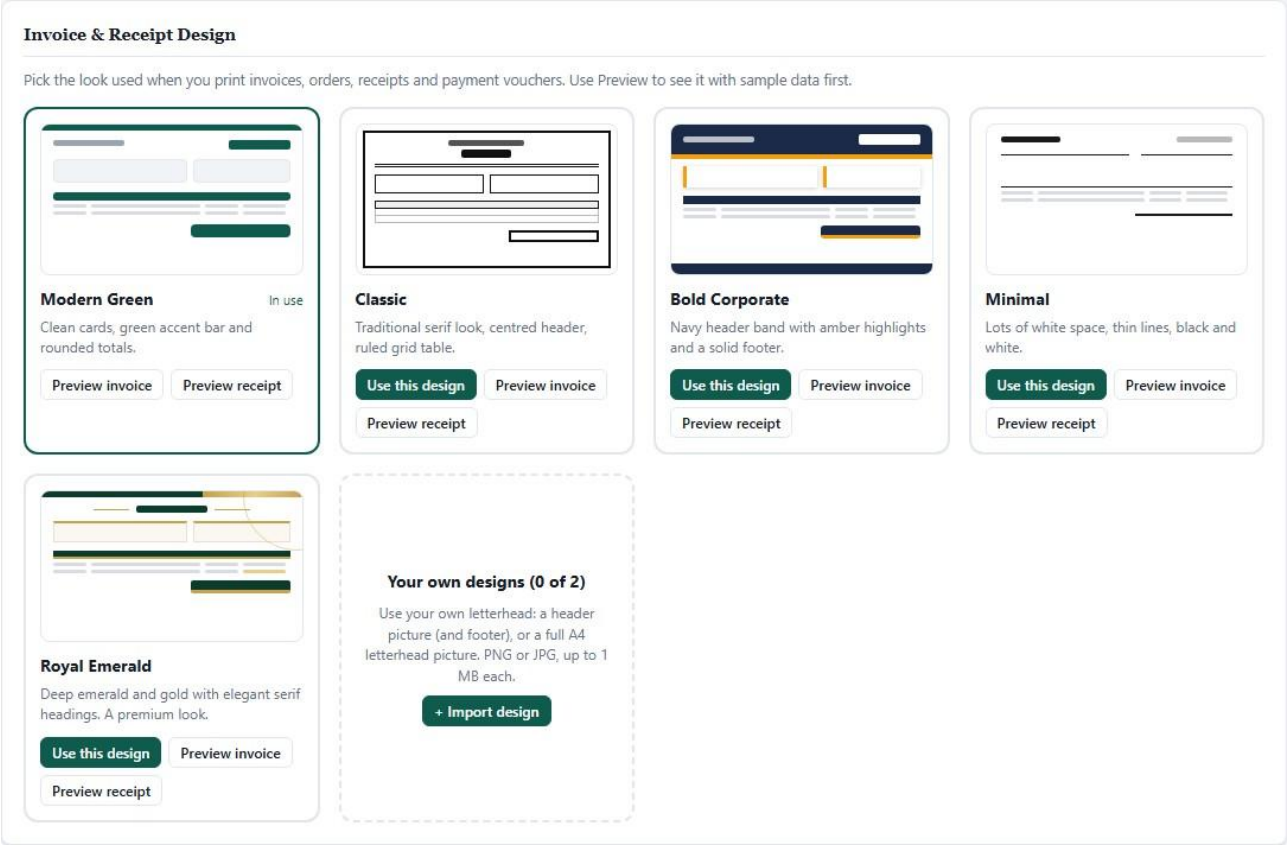

Click **Save All Defaults** at the bottom.

3.6 Invoice & Receipt Design tab

Invoice & Receipt Design

Logo: upload or remove your logo here too, choose **Logo size on documents**, and choose whether to **Show logo on printed documents**. A PNG with a transparent background looks best.

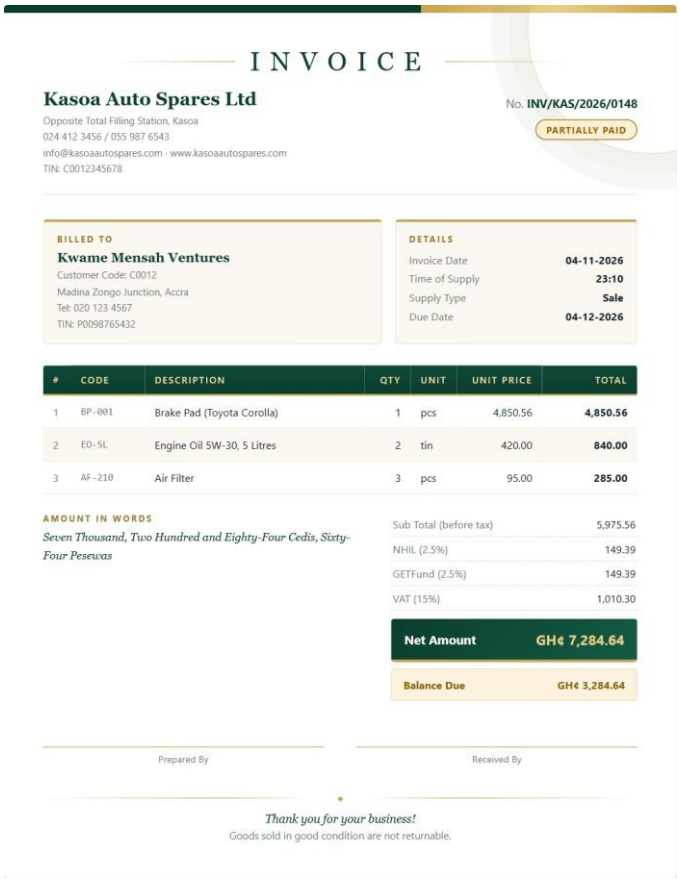

Choosing a design

Invoice & Receipt Design: five looks for printed invoices, orders, receipts and payment vouchers: **Modern**, **Classic**, **Bold Corporate**, **Minimal** and **Royal Emerald**. Click **Preview invoice** or **Preview receipt** to see each one with sample data, then **Use this design**. The design in use is marked In use.

Royal Emerald (new in 2.3.3)

Royal Emerald is a premium look: deep emerald green and gold, with elegant serif headings, a gold line under the header and a green and gold totals box. Click **Preview invoice** on its card to see it, then **Use this design**.

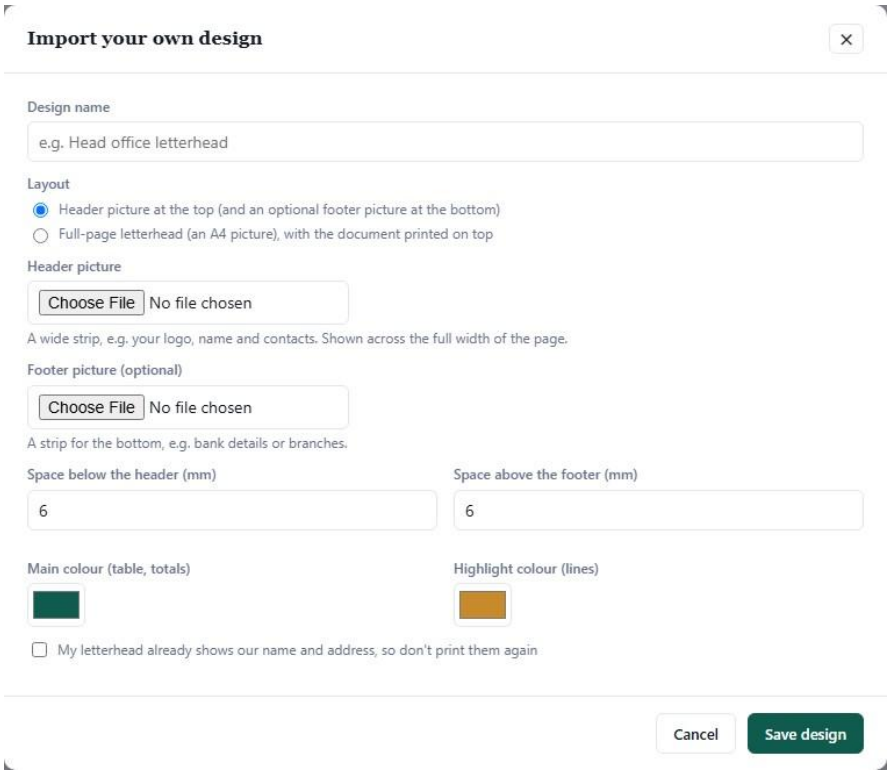

An invoice in the Royal Emerald design

Your own designs (new in 2.3.3)

If you already have a printed letterhead, you can use it on your invoices, orders, receipts and vouchers. You can keep up to **two** of your own designs.

1. On the **Your own designs** card, click **+ Import design**.
2. Type a **Design name**, for example Head office letterhead.
3. Choose the **Layout**: a **Header picture** at the top (with an optional **Footer picture** at the bottom), or a **Fullpage letterhead** (a picture of your whole A4 page, with the document printed on top).
4. Pick the picture file. It must be **PNG or JPG**, and no bigger than **1 MB**. Large pictures are made smaller automatically so the company file stays light.
5. Set the **Space below the header** and **Space above the footer** in millimetres, and the **Main colour** and **Highlight colour** used for the table and totals.
6. If your letterhead already shows your name and address, tick **My letterhead already shows our name and address, so don't print them again**.
7. Click **Save design**. The new design goes into use straight away and gets its own card, where you can preview, edit or delete it.

Import your own design

Note: a full-page letterhead fills the printable area of the page, inside the printer margins, not the very edge of the paper. If you delete the design that is in use, the program goes back to Modern Green.

Your colours (new in 2.3.3)

Use your own brand colours on **Modern Green**, **Bold Corporate** and **Royal Emerald**. Pick a **Main colour** and a **Highlight colour**, then click **Save colours**. If the main colour is too light for white writing, the program warns you. **Reset to the design's own colours** puts the original colours back. Classic and Minimal stay black and white, and your own designs keep their own colours.

Entry window layout (new in 2.3.3)

This sets how invoices, orders, quotations, receipts, payments, credit notes and expenses look while you enter them. The window is split into sections, for example **Customer & dates**, **Items** and **Discounts, tax & other details**, so it is easy to see which part you are filling in. There are four choices:

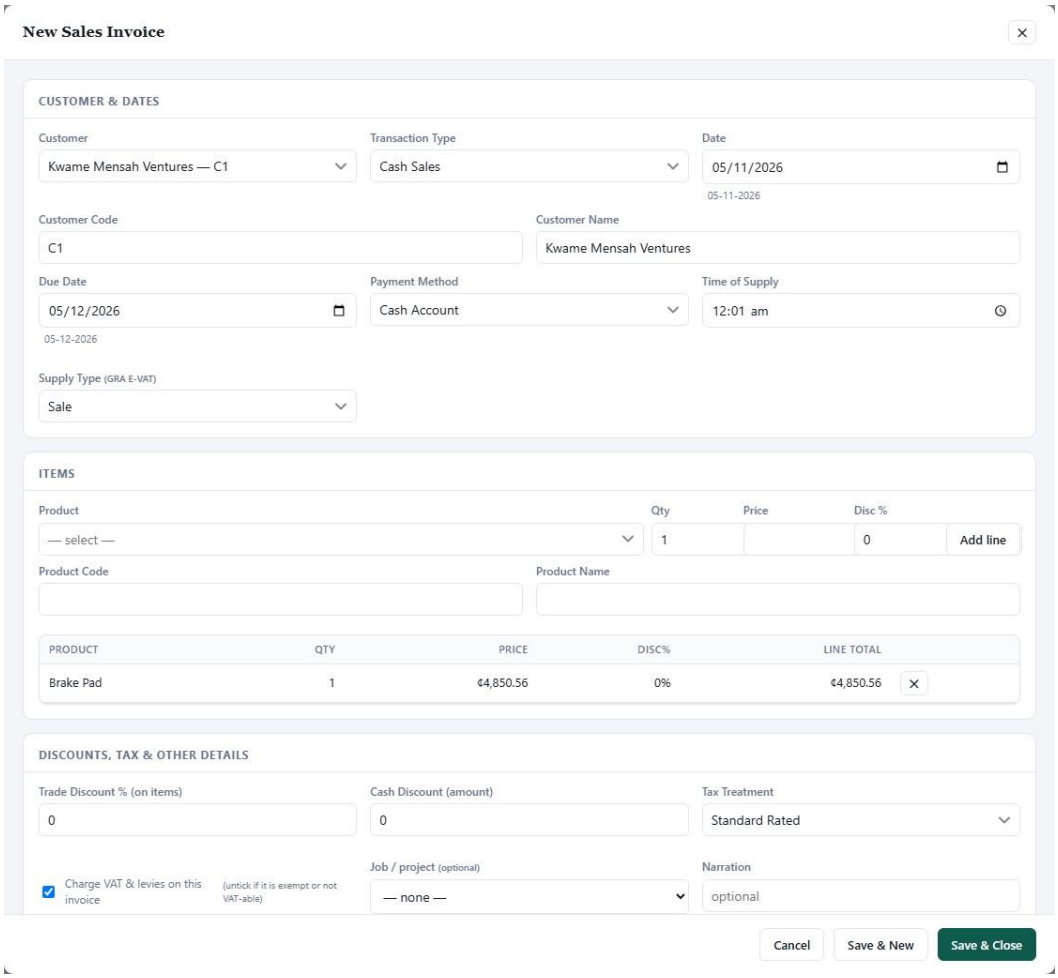

Plain: no dividers, one run of boxes (the old look).

Style A: Headings with a line: a green heading with a thin line above each section.

Style B: A card for each section (the default): each section in its own white card on a light grey background.

Style C: Numbered steps: numbered steps 1, 2, 3 with a coloured bar down the side.

Click **Preview** to see a sample Sales Invoice in that layout, then **Use this layout**. Everyone in the company sees the same layout. **Trade Discount %** is now in the Discounts section, below the items: changing it updates the items that still carry the old trade discount.

A Sales Invoice in Style B: a card for each section

3.7 Chart of accounts

The chart of accounts is the list of every account the program posts to. Open it from **General > Chart of Accounts**. You need Edit on the Account Information right to change it.

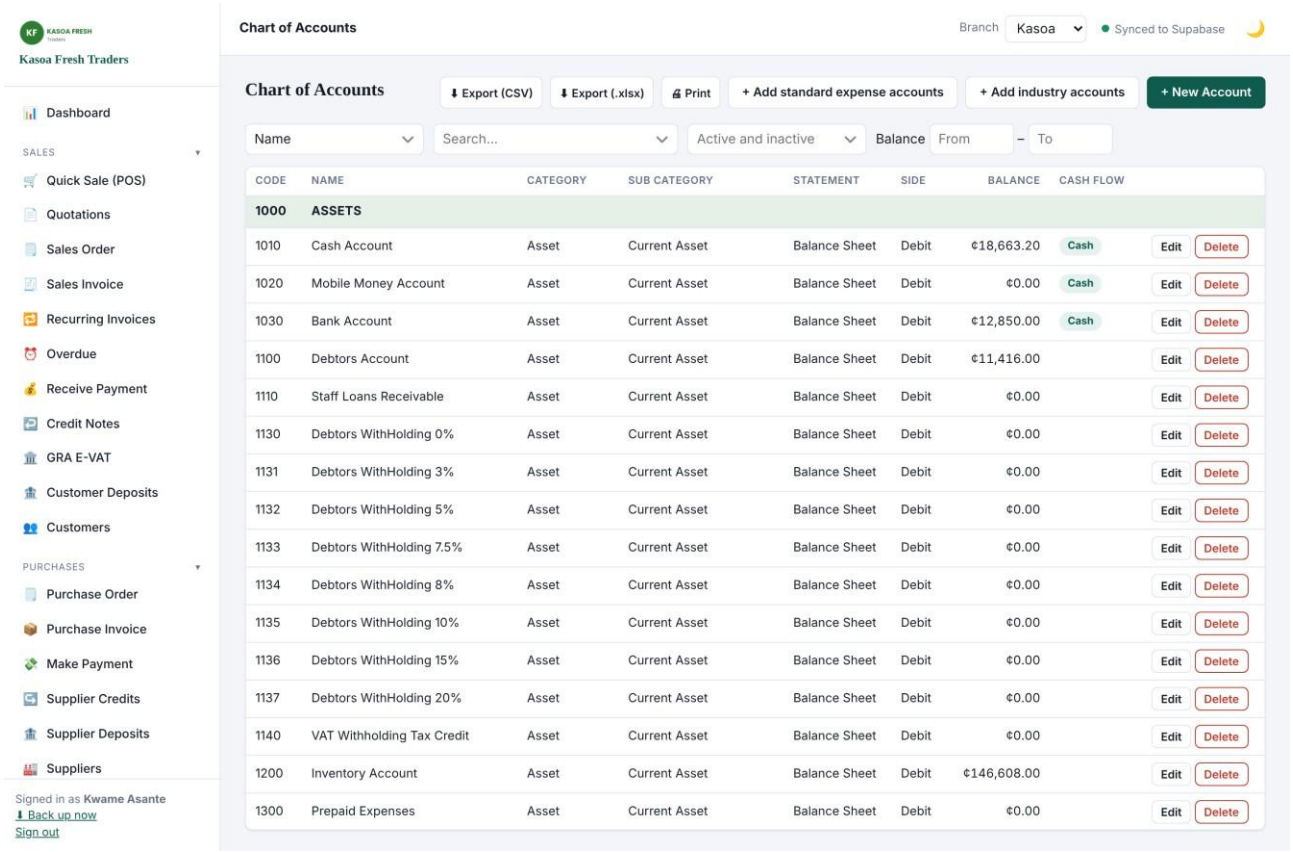

Chart of Accounts with group headings

The numbered chart. A new company (since version 2.3.0) uses numbered codes in groups: **1000** Assets, **2000** Liabilities, **3000** Equity, **4000** Income, **5000** Cost of sales, **6000** Operating expenses and **7000** Other income, finance costs and tax. Group headings show in the Chart of Accounts and the Trial Balance with a subtotal for each group. Nothing can be posted to a heading. When the program makes a new account (petty cash, deposits, payroll accounts, unions, or one you add), it gets the next free number in its group.

Companies created before 2.3.0 keep their letter codes unless they choose to change. If such a company has no transactions yet, a **Use numbered chart** button switches it to numbers.

Renumber accounts (a company that already has transactions). An administrator sees 🔢 **Renumber accounts** in the Chart of Accounts.

1. Make a backup first (section 13.2), and ask everyone else to close the program.
2. Click 🔢 **Renumber accounts**. The program lists every account with its **old code** and **new code** in the numbered groups.
3. Check the list and confirm.

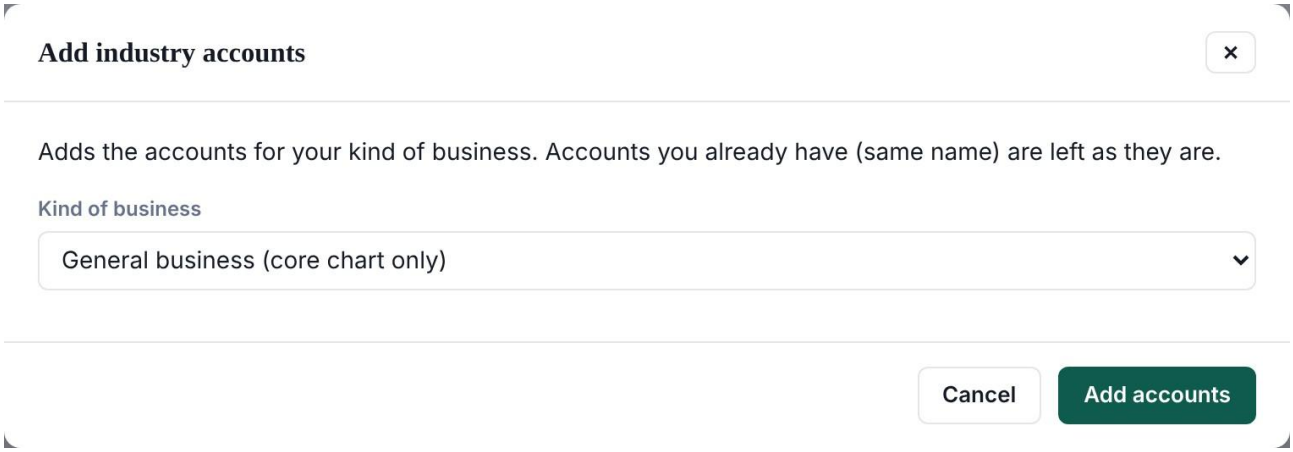

Account names, balances and history stay the same. The code changes on every ledger line and document, and in payroll, fixed assets, budgets and the settings. A document typed with an old code (on another computer, or offline) still goes to the right account. If the internet drops halfway, a message says so: press **Renumber accounts** again to finish.

Buttons on this screen

+ Add standard expense accounts: adds Rent, Electricity (ECG), Water (GWCL) and the other standard Ghana expense accounts you do not have yet. It lists them and asks before adding.

+ Add industry accounts: adds the accounts for Printing and branding, Shop / trading, Services, Restaurant / food, Pharmacy, Construction, NGO / charity or Church. Accounts you already have (same name) are left alone. A pack can also add its business units: Restaurant has Kitchen, Bar and Catering; Pharmacy has accounts

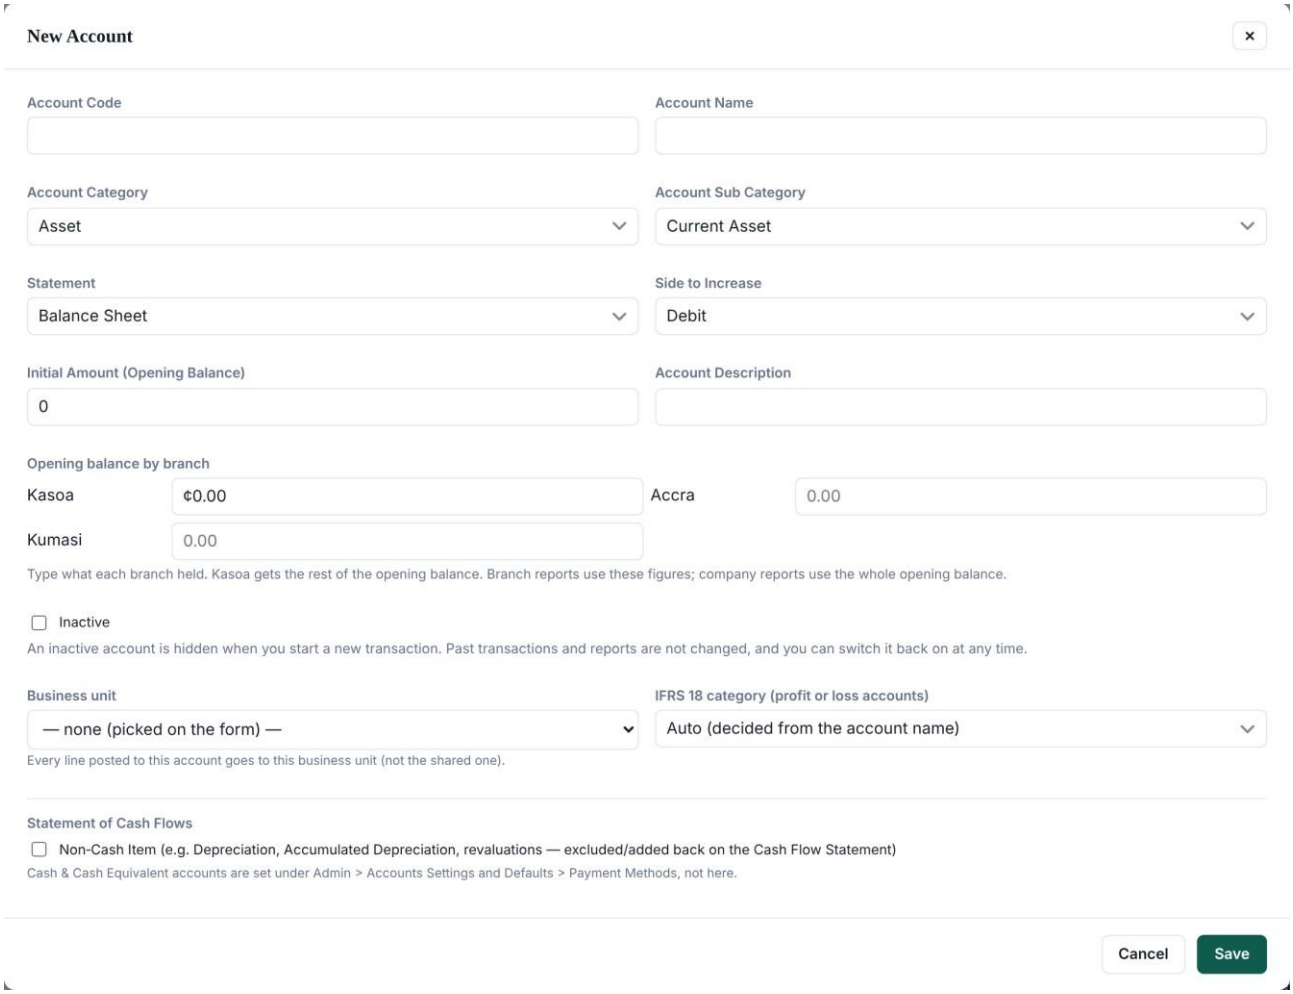

such as NHIS Claims and Expired Medicines; Construction has Retentions and Site Labour. The **Printing and branding** pack holds 47 accounts for stock, income and direct costs in each of its six business units (D00 to D05).

Adding an industry pack

+ New Account opens the account form.

The search box, the Search by list, the status filter (active, inactive or both) and the Balance from and to boxes narrow the list. Export and print buttons are at the top. **Adding an account**

New account form

1. Click **+ New Account**.
2. Type the **Account Name**. In a numbered chart, choose the **Account Sub Category** first and the next free code in that group is suggested.

3. Check the **Account Code**, **Account Category** (Asset, Liability, Equity, Income, Expense or Cost of Sales), **Statement** (Balance Sheet or Profit or Loss) and **Side to Increase** (Debit or Credit).
4. Enter an **Initial Amount (Opening Balance)** if the account has one. With two or more branches, also fill in **Opening balance by branch** (section 3.8).
5. Choose the **Business unit** for an income or cost account that belongs to one line of business. Leave it blank (or on the shared unit) for accounts used by the whole company. The account list shows the code next to the name.
6. **IFRS 18 category** (for profit or loss accounts): leave it on Auto, or choose Operating, Investing, Financing, Income taxes or Discontinued operations.
7. Tick **Non-Cash Item** for depreciation, accumulated depreciation and revaluations, so the Cash Flow statement treats them correctly.
8. Click **Save**.

Importing a chart. An account import (section 3.3) reads a **Business Unit** column by code or name (the older Default Department column still works). A unit the program doesn't have yet is added, and you give it its name afterwards in Branches and business units.

To stop using an account, make it **Inactive** (section 5.4). An account with a balance cannot be deleted, and an account used in your settings cannot be made inactive until you change that setting.

3.8 Opening balances

When you move to 2A FlowBooks from another system or from paper, bring in the balances on the day you start:

Accounts: open each balance sheet account (cash, bank, stock, fixed assets, loans, capital) and enter its **Initial Amount (Opening Balance)**, or import the account list with an opening column (section 3.3). You can also post one opening journal dated the day before you start (section 9.1).

Customers and suppliers: enter the amount owed in the **Opening** box on each record, or import the list with the opening column. Opening amounts show in their statements and ageing.

Products: enter the opening quantity and its total cost on each stocked product, or import them (openingStock and openingBalance columns).

Opening balances by branch. With two or more branches, the account form shows **Opening balance by branch**. Type what each branch held on the starting day; the first branch (usually head office) gets the rest of the account's opening balance. A Trial Balance or Balance Sheet for one branch then includes that branch's opening balance, while company reports use the whole figure. An account with no branch figures counts its whole opening balance in the first branch.

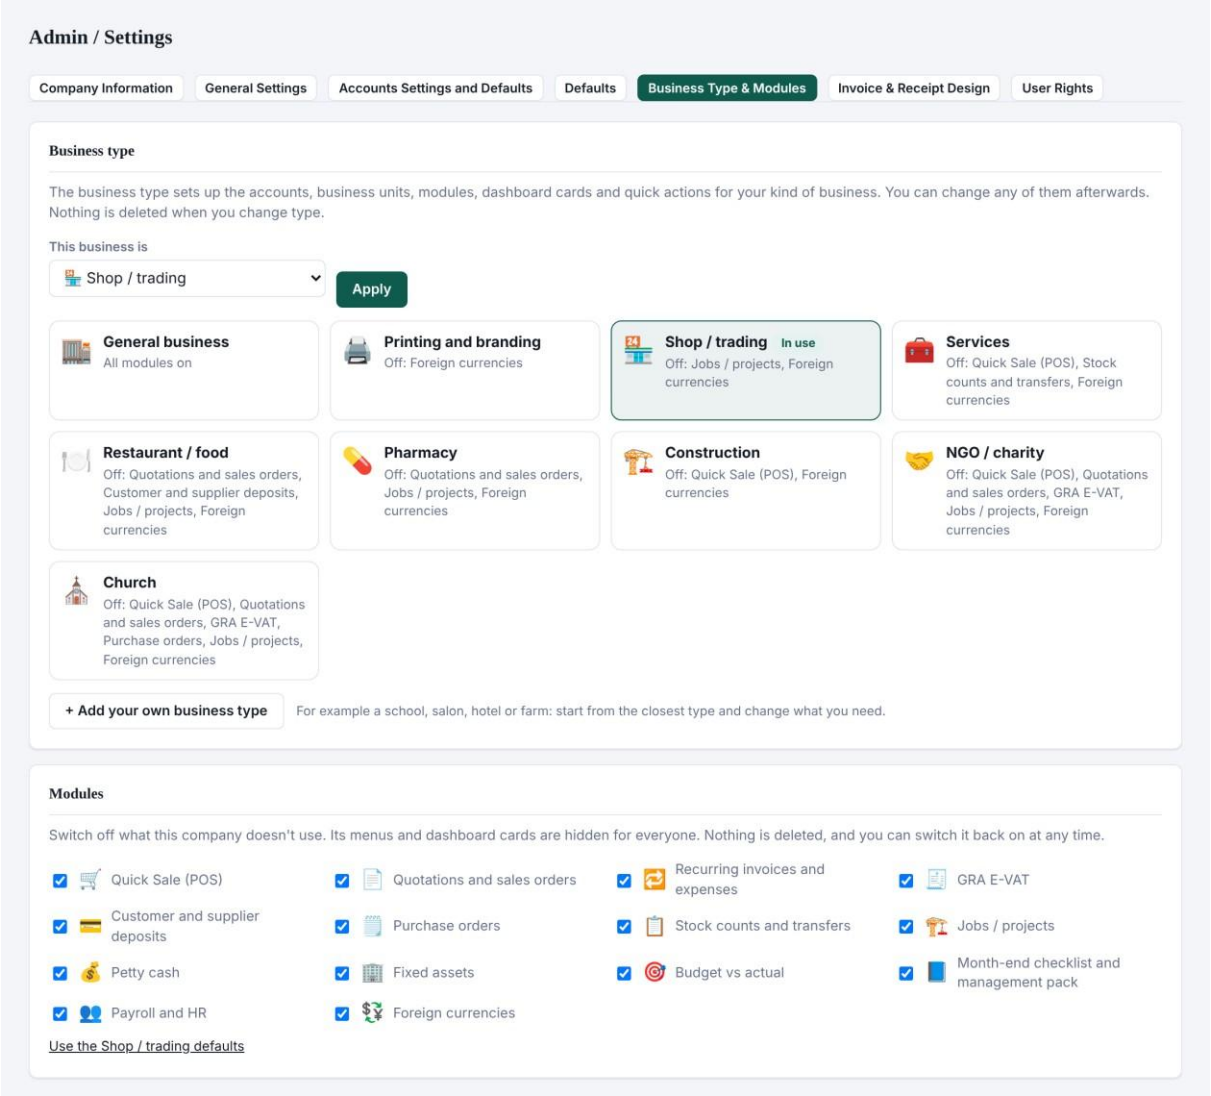

Opening balance by branch on the account form

Ask your accountant for the closing figures from your old books, and check the Trial Balance afterwards: debits must equal credits.

> **Tip:** The dashboard's Getting started list ticks "Review your chart of accounts and enter opening balances" once any account, customer or supplier has an opening amount.

3.9 Business Type & Modules tab

This tab tells the program what kind of business the company is, and which parts of the program it uses. It needs Edit or Full on the Admin right.

Business Type & Modules

Business type

A **business type** is a ready-made setup for one kind of business. Each type holds:

the **accounts** it adds (an industry pack, section 3.7);

its **business units** (section 3.2), for example Restaurant: Kitchen, Bar and Catering; which **modules** are on; its **dashboard cards** and **quick actions** (section 2.6).

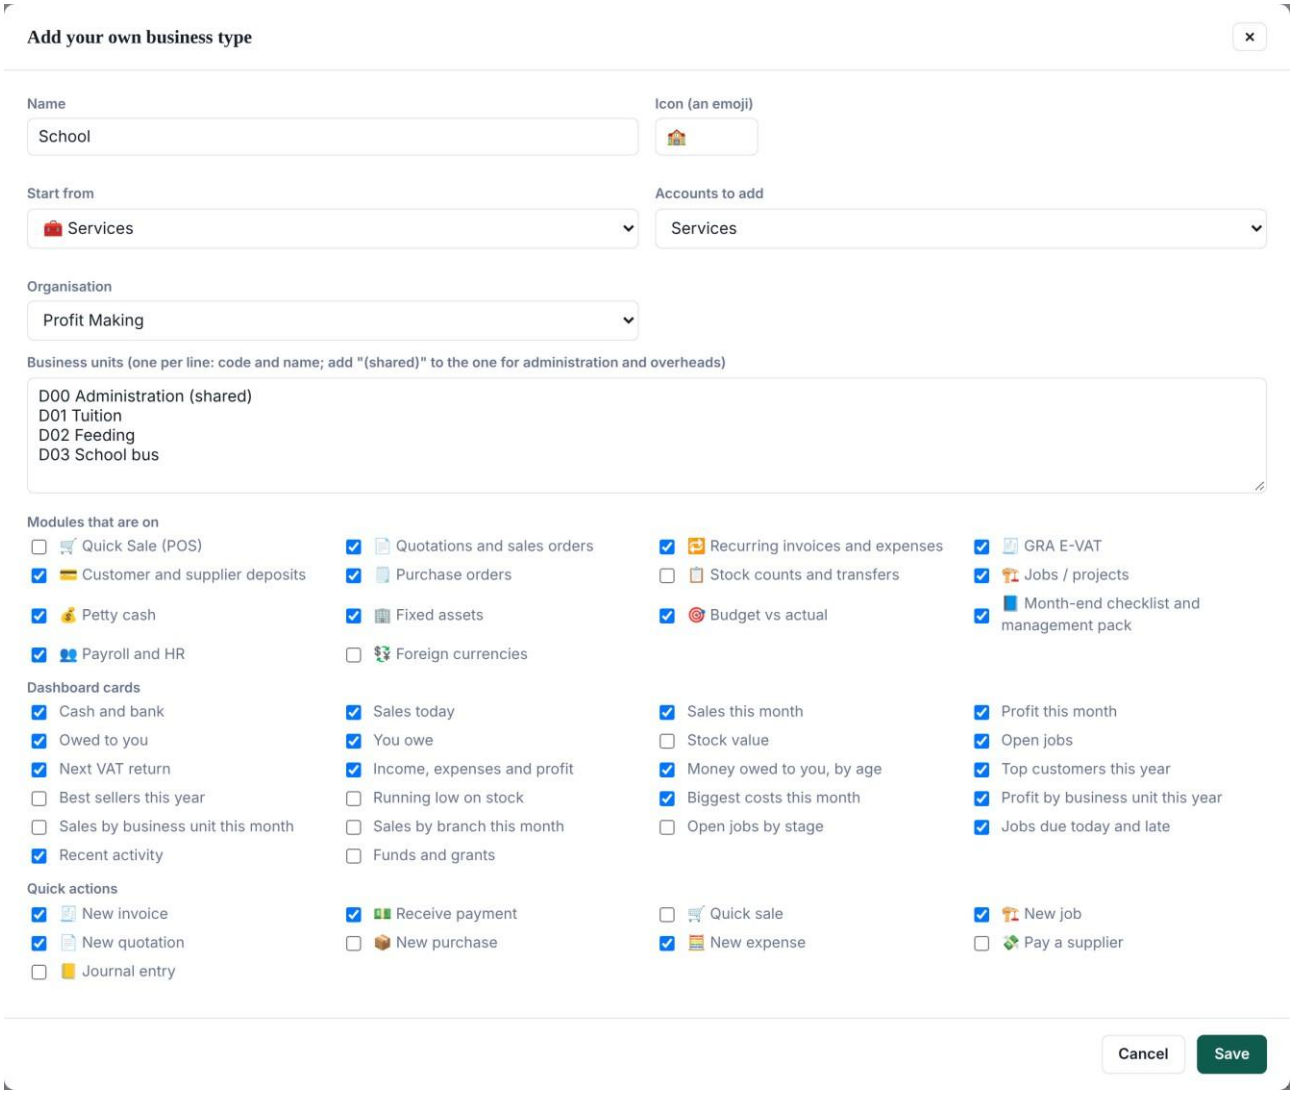

The nine built-in types are General business, Printing and branding, Shop / trading, Services, Restaurant / food, Pharmacy, Construction, NGO / charity and Church. Each type is shown as a tile with the modules it switches off; the one in use is marked **In use**.

Changing the business type

1. Choose the type in **This business is**.
2. Click **Apply**. A Yes/No box lists what will change: the accounts it adds, the business units it adds, the modules and the dashboard.
3. Click OK.

Accounts and business units you already have are kept, and nothing is deleted. Users who have arranged their own dashboard keep it.

Adding your own business type (for example a school, salon, hotel or farm)

Adding your own business type

1. Click **+ Add your own business type**.
2. Choose **Start from**: the closest built-in type. Its settings are copied into the form.
3. Type the **Name** and an **Icon** (an emoji such as 🏫).
4. Choose the **Accounts to add** (an industry pack) and the **Organisation**: Profit Making or Non Profit Making.
5. Under **Business units**, type one per line, code first, for example "D01 Tuition". Add "(shared)" after the one for administration and overheads.
6. Tick the **Modules that are on**, the **Dashboard cards** and the **Quick actions**.
7. Click **Save**. Then choose it in **This business is** and click **Apply**.

Your own types show **Edit** and **Remove** on their tile (the type in use cannot be removed). They are kept in this company only.

Modules

Fourteen switches turn parts of the program on or off for the whole company: **Quick Sale (POS)**, **Quotations and sales orders**, **Recurring invoices and expenses**, **GRA E-VAT**, **Customer and supplier deposits**, **Purchase orders**, **Stock counts and transfers**, **Jobs / projects**, **Petty cash**, **Fixed assets**, **Budget vs actual**, **Month-end checklist and management pack**, **Payroll and HR** and **Foreign currencies**.

Untick a module to switch it off. Its menu items, dashboard cards and quick action are hidden for everyone at once.

Nothing is deleted. The module's records stay in the books and in the reports, and come back when you tick it again.

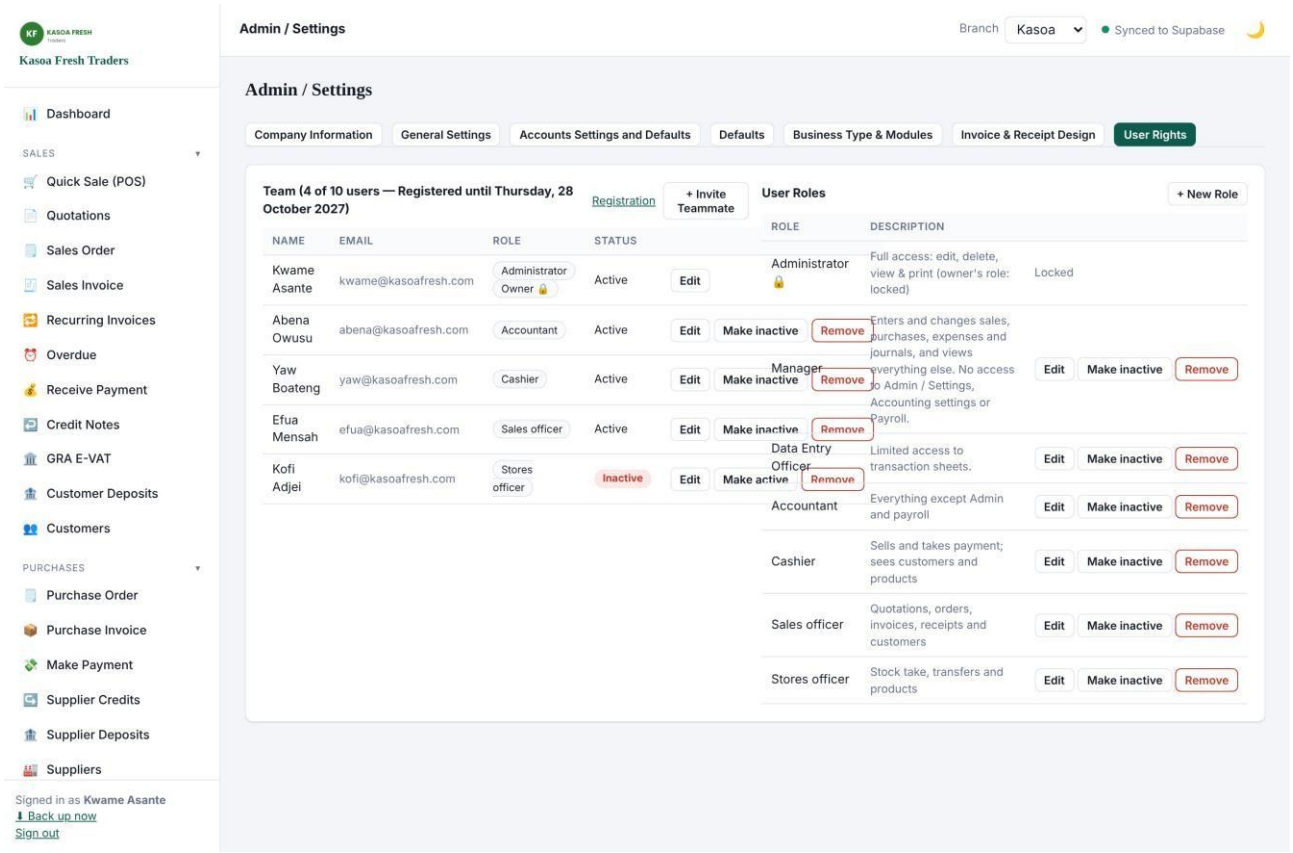

If someone opens a switched-off screen from an old link, the program says the module is switched off and where to switch it on.

Each business type has its own defaults (a Shop has Jobs off, for example). puts them back.

> **Tip:** Switching a module off is not the same as taking away a right. Rights (chapter 4) decide what each person may do; modules decide what the company uses at all. In Non Profit mode the older **Menus tucked away** ticks (section 3.2) still work as well.

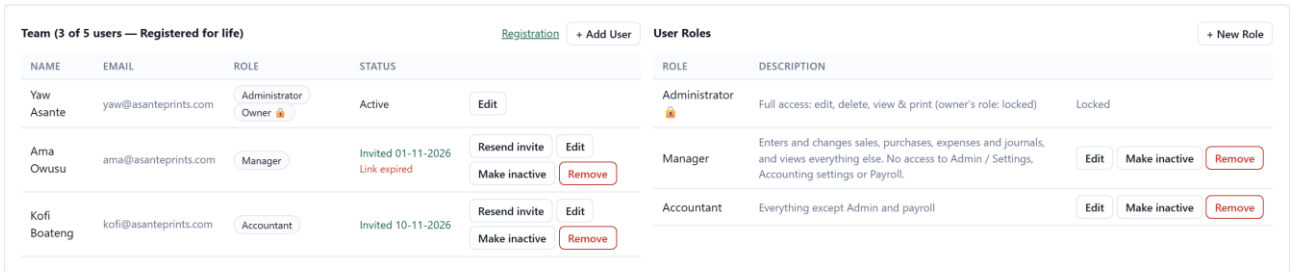

4. Users, roles and rights

Every person who works in the program signs in with their own email and password, and has one **role**. A role is a named set of **rights**: for each part of the program it says whether the person can change, look at, or not see that part. On top of the role, each person can be limited to one or more **branches**. All of this is managed in **Admin / Settings > User Rights**, which needs Edit or Full on the Admin right.

User Rights tab

4.1 The User Rights tab

Team and User Roles

The tab has two lists side by side.

Team shows how many users you have and how many your licence allows (for example "5 of 10 users"), with the licence status. For each person it shows the name, sign-in email, role and status:

Active: the person has signed in.

Invited: an invitation was sent but the person has not signed in yet. The date it was sent shows under it (for example Invited 01-11-2026), with **Link expired** in red once the link can no longer be used.

Inactive (in red): the person has been switched off and cannot open the company (section 4.3).

Owner 🔒**:** the person who created the company. The owner is always an Administrator and this cannot be changed from inside the program.

Beside each person are **Edit**, **Make inactive** (or **Make active**) and **Remove**, and **Resend invite** for anyone still marked Invited (section 4.2). The owner and you yourself have only **Edit**.

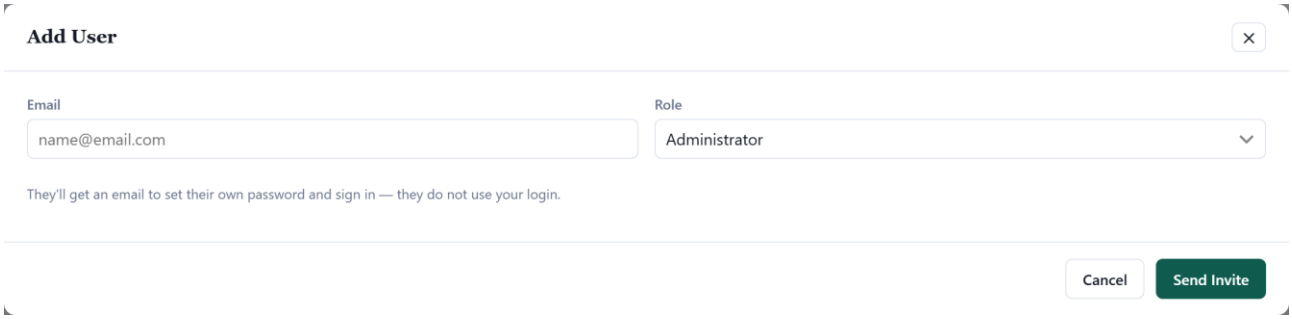

User Roles lists the roles in your company with their descriptions. A new company has three: **Administrator** (full access to everything; it is the owner's role, so it is locked), **Manager** (enters and changes sales, purchases, expenses and journals, and views everything else; no access to Admin / Settings, Accounting settings or Payroll) and **Accountant** (everything except Admin / Settings and payroll). Companies made before version 2.3.2 keep the roles they had. You can add as many roles as you need. Beside each role (except the locked owner's role) are **Edit**, **Make inactive** (or **Make active**) and **Remove**:

An **inactive** role is kept for the people who already have it, but it is not offered when you add a user or change one.

Remove deletes a role. It is allowed only when no user has that role.

The **Registration** link opens the licence window (section 4.7).

4.2 Adding a user

Add User

1. Click **+ Add User**.
2. Type the person's **Email**.
3. Choose their **Role**.
4. Click **Send Invite**.

The person receives an email to set their own password and sign in. They never use your login. If that email already has a 2A FlowBooks account (for example for another company), no email is sent; the company is added to their account and they see it after signing in and switching company.

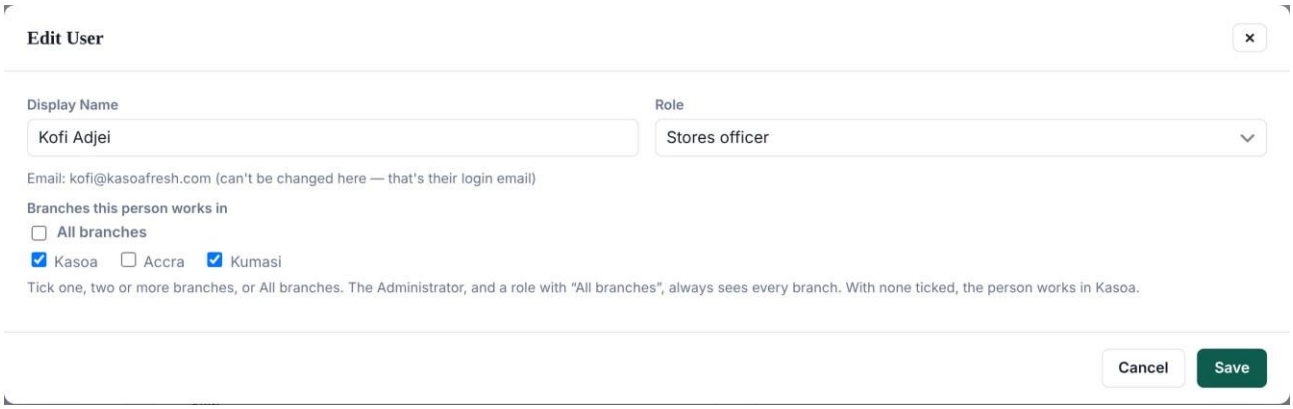

When the number of users reaches your licence limit, the **+ Add User** button is greyed out and a note tells you to contact 2A Prints to add users.

Resending an invite. The invitation link works for a limited time. If the person missed it, click **Resend invite** on their row in the Team list. A fresh email with a new link goes to the same email with the same role. It does not add a second user or use up another user slot. A message confirms it was sent ("Invite sent again to …"), or says why it could not be sent.

> **Tip:** Give every person their own sign-in. Never share passwords: the Audit Log records who did what, and that only means something if each person signs in as themselves.

4.3 Changing a user

Click **Edit** beside the person.

Edit User

Display Name: the name shown in the program, on records and in the Audit Log.

Role: choose another role. The owner's role cannot be changed.

Email: shown for information. It is their sign-in email and cannot be changed here.

Branches this person works in (only when branches are set up): tick one, two or more branches, or **All branches**. With none ticked, the person works in the first branch in your list.

Click **Save**. The program refuses a change that would leave the company without any administrator.

Stopping someone from working in the company

Make inactive (on the Team list) switches a person off for now, for example during long leave or a suspension. They cannot open the company: the sign-in screen tells them their access has been switched off. **Make active** lets them back in with the same role and branches.

Remove takes a person out of the company for good, for example when they leave. They cannot open the company, they leave the Team list, and they no longer count towards the number of users shown. The program also removes their membership of the company on the server, so they cannot reach its data at all. To let a removed person back in, add them again with + Add User (section 4.2).

In both cases the person's name stays on the work they entered, and the Audit Log keeps their history. The owner and yourself cannot be made inactive or removed, and the program always keeps at least one active administrator.

> **Tip:** Removing a person from the server uses a small server function, "remove-teammate", which 2A Prints or your administrator sets up once (the steps are in LICENSING.md). Until it is set up, a removed person is still blocked by the program, and the program tries the server again each time User Rights is opened.

4.4 Roles and the four access levels

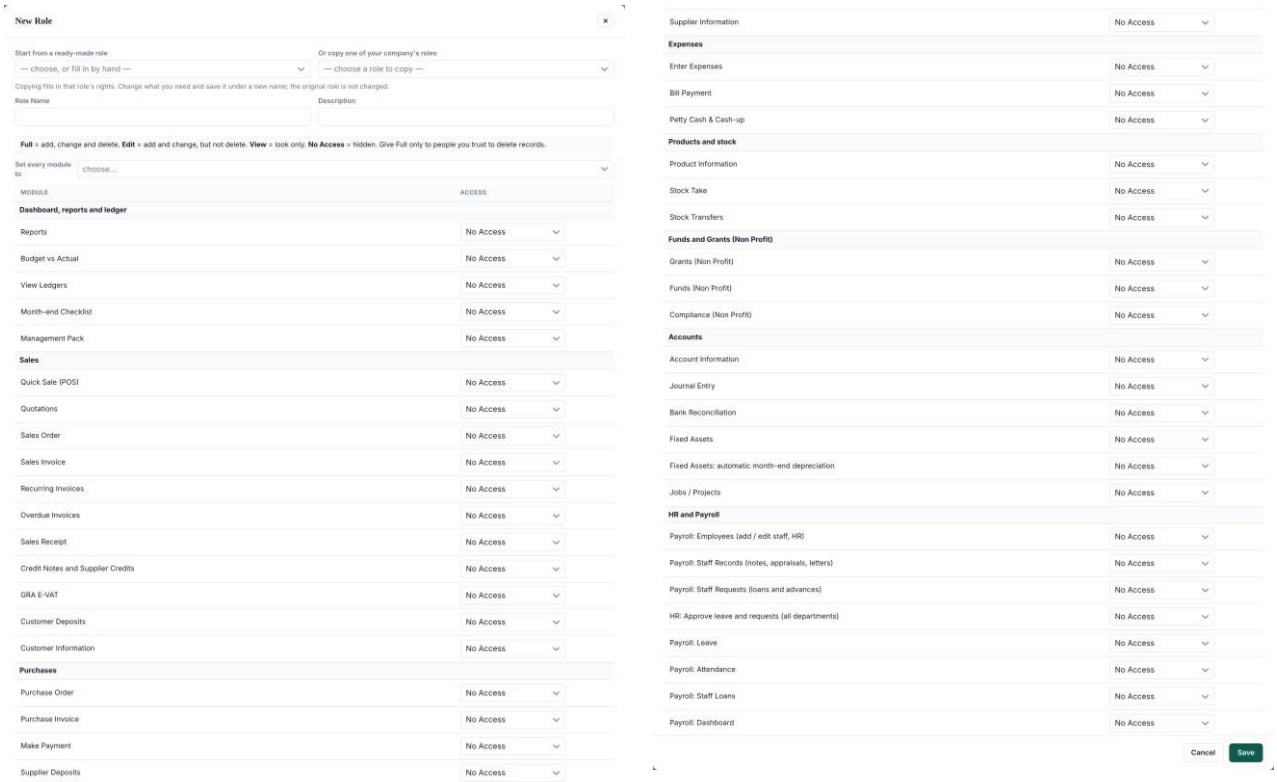

For each right a role has one of four levels:

Level	What the person can do
Full	Add, change and delete
Edit	Add and change, but not delete
View	Look only (and print or export)
No Access	The menu item is hidden

Only the Administrator role has Full by default. Delete buttons are hidden for anyone without Full on that module, so other users correct mistakes with credit notes, voids and reversing journals, or ask an administrator.

Making a new role

Click **+ New Role**.

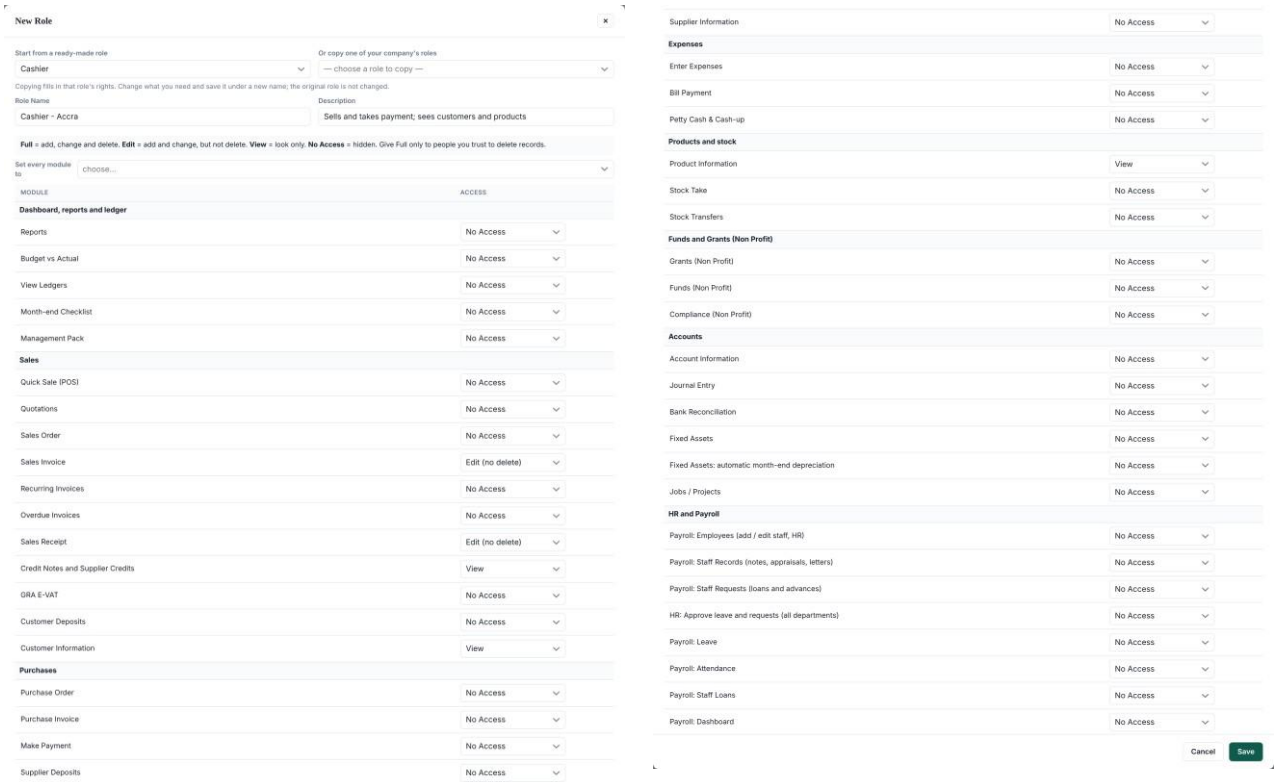

New Role

1. Start in one of three ways:

   Start from a ready-made role: pick a template (table below). Its rights are filled in.

   Or copy one of your company's roles: its rights are filled in. Change what you need and save it under a new name; the original role is not changed.

   Or fill it in by hand.
2. Type the **Role Name** and a **Description**.
3. Use **Set every module to** to fill the whole list in one step (for example No Access), then change the rights you want.
4. Set each right in the list. The list is grouped under headings: Dashboard, reports and ledger; Sales; Purchases; Expenses; Products and stock; Funds and Grants (Non Profit); Accounts; HR and Payroll; System.
5. Click **Save**.

A new role started from the Cashier template

Two roles cannot have the same name. To change a role, click **Edit** beside it. The owner's role is locked: it always has Full on everything.

Ready-made roles

Template	What it gives
Cashier	Sales invoices and receipts (Edit); customers, products and credit notes (View)
Sales officer	Customers, quotations, sales orders, invoices, receipts, credit notes and customer deposits (Edit); GRA E-VAT, products, jobs and reports (View)
Purchasing officer	Suppliers, purchase orders, purchase invoices, products, stock take and transfers (Edit); Make Payment (View)
Stores officer	Products, stock take and transfers (Edit); purchase invoices (View)
Accountant	Edit on everything except Admin and the HR and Payroll screens. This includes the Accounting settings, Backups, automatic depreciation and All branches rights
HR officer	Employees, leave, attendance, staff records, staff requests and approvals, own payslips (Edit); payroll dashboard (View)
Payroll officer	Payroll dashboard, pay runs, loans, tax tables, payroll reports and journals (Edit); employees, payroll setup and staff requests (View)
Staff / department head	Own payslips and requests only (heads approve their department from Payroll Setup)
Auditor (view only)	View on everything except Admin. Can see the accounting settings but not change them

4.5 Every right explained

Group	Right (as named in the role form)	What it controls
Dashboard, reports and ledger	Reports	The Dashboard and the Reports screen
	Budget vs Actual	Budgets and the Budget vs Actual report
	View Ledgers	The Ledger screen and party ledgers
	Month-end Checklist	The month-end checklist

	Management Pack	The management pack
Group	**Right (as named in the role form)**	**What it controls**
Sales	Quick Sale (POS)	The counter sale screen
	Quotations, Sales Order, Sales Invoice	Those documents
	Recurring Invoices	Recurring invoice schedules
	Overdue Invoices	The Overdue screen, reminders and statements
	Sales Receipt	Receive Payment
	Credit Notes and Supplier Credits	Credit notes to customers and credits from suppliers
	GRA E-VAT	Recording E-VAT clearance and the voided register
	Customer Deposits	Customer deposits, applying and refunding them
	Customer Information	The customer list and records
Purchases	Purchase Order, Purchase Invoice, Make Payment	Those documents
	Supplier Deposits	Supplier deposits
	Supplier Information	The supplier list and records
Expenses	Enter Expenses	Expenses and recurring expenses
	Bill Payment	Pay Expense
	Petty Cash & Cash-up	The petty cash book, vouchers, top-ups and cashup
Products and stock	Product Information	The product list and records
	Stock Take	Stock takes and Quick Adjustments
	Stock Transfers	Moving stock between locations
Funds and Grants (Non Profit)	Grants, Funds, Compliance	The Non Profit screens
Accounts	Account Information	The Chart of Accounts
	Journal Entry	Single and multi-line journals
	Bank Reconciliation	Bank reconciliation and statement import
	Fixed Assets	The asset register, depreciation and disposals
	Fixed Assets: automatic month-end depreciation	Switching automatic depreciation on or off. Depreciation is posted automatically only when someone with this right opens the program
	Jobs / Projects	Jobs, stages and job statements
HR and Payroll	Payroll: Employees, Staff Records, Staff Requests, Leave, Attendance, Staff Loans	Those HR screens
	HR: Approve leave and requests (all departments)	Approving leave and staff requests for every department
	Payroll: Dashboard, Pay Runs, Tax Tables, Reports, Setup	Those payroll screens
	My Payslips (staff self-service)	A person's own payslips and requests
System	Admin	Company Information, General Settings, Invoice & Receipt Design and User Rights
	Accounting settings	Accounts Settings and Defaults, the Defaults tab, and month and year closing
	Backups	Making and restoring backups of all company data
	Currencies	Currencies and exchange rates

	Audit Log	The Audit Log
	All branches	Seeing and working in every branch

Rights that work differently

Admin: only Edit or Full opens the Admin tabs. View on Admin shows the menu item but no tabs.

Accounting settings: View lets a person read the two accounting tabs; Edit or Full lets them change them.

Backups: needed to make backups (including the automatic ones at closing time) and to restore. The backup reminder on the dashboard shows only to people with this right.

All branches: any level except No Access lets the person see and work in every branch. The Administrator role always sees every branch.

Full: the only level that can delete, and the level needed to approve large supplier payments (section 7.3).

4.6 Branch access

When the company has branches (section 3.2), each person works only in the branches they may see:

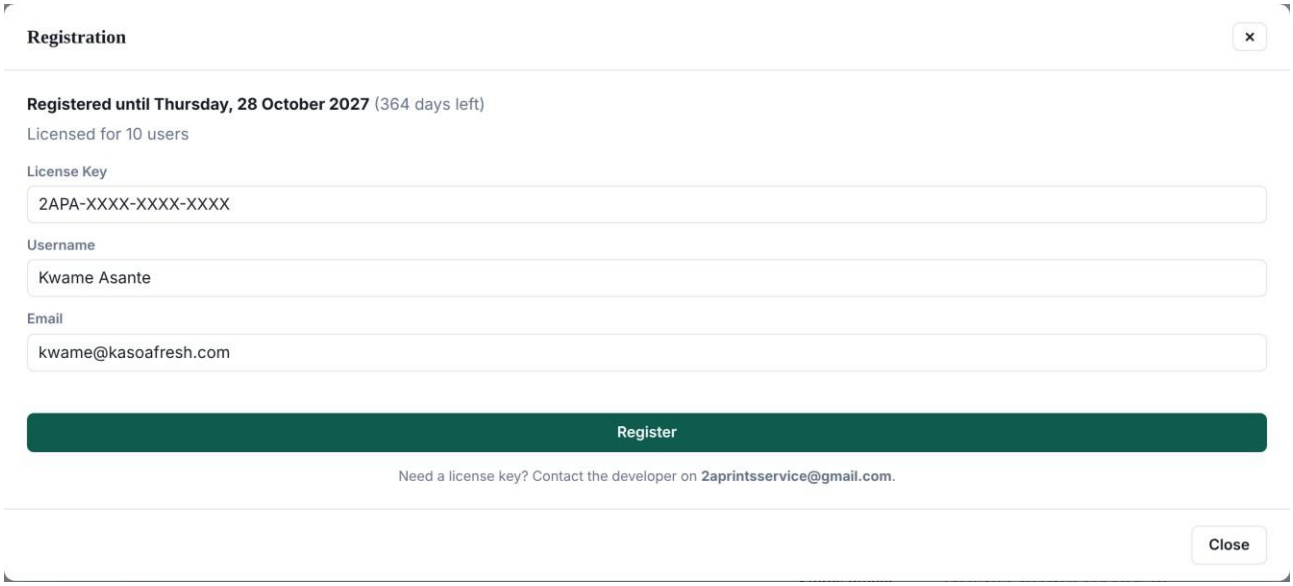

The owner, anyone whose role has Full on Admin, any role with the **All branches** right, and anyone with **All branches** ticked on their user, see every branch.

Everyone else works in the branches ticked on their user. With none ticked, they work in the first branch.

A person with more than one branch switches at the top of the screen. What they enter is tagged with the branch they are working in, their document numbers carry that branch's code, and they can sell only that branch's stock. Their reports and lists show only their branches. Only someone with All branches can count the whole company's stock or move stock out of another branch's locations.

4.7 Licence and registration

Click **Registration** on the User Rights tab.

Registration

The window shows the licence status (for example "Registered until Thursday, 28 October 2027" and the days left) and how many users it covers. To renew or extend, paste the new **License Key**, check the username and email, and click **Register**. The key is checked by the licence server; you do not need to sign out.

During the free trial, the dashboard banner also has **Enter licence key**, **Request more time** and **WhatsApp us** buttons (section 2.1).

4.8 Accountability

Every record keeps who created it and when.

The **Audit Log** (System > Audit Log) records who created, changed or deleted what, and when, and flags records saved outside working hours (section 13.3).

In the desktop app, a quiet safety backup is saved to the Backup folder before anything is deleted (at most one every 30 minutes).

Review users and roles whenever staff change, and at least every quarter. Give each person the smallest set of rights they need.

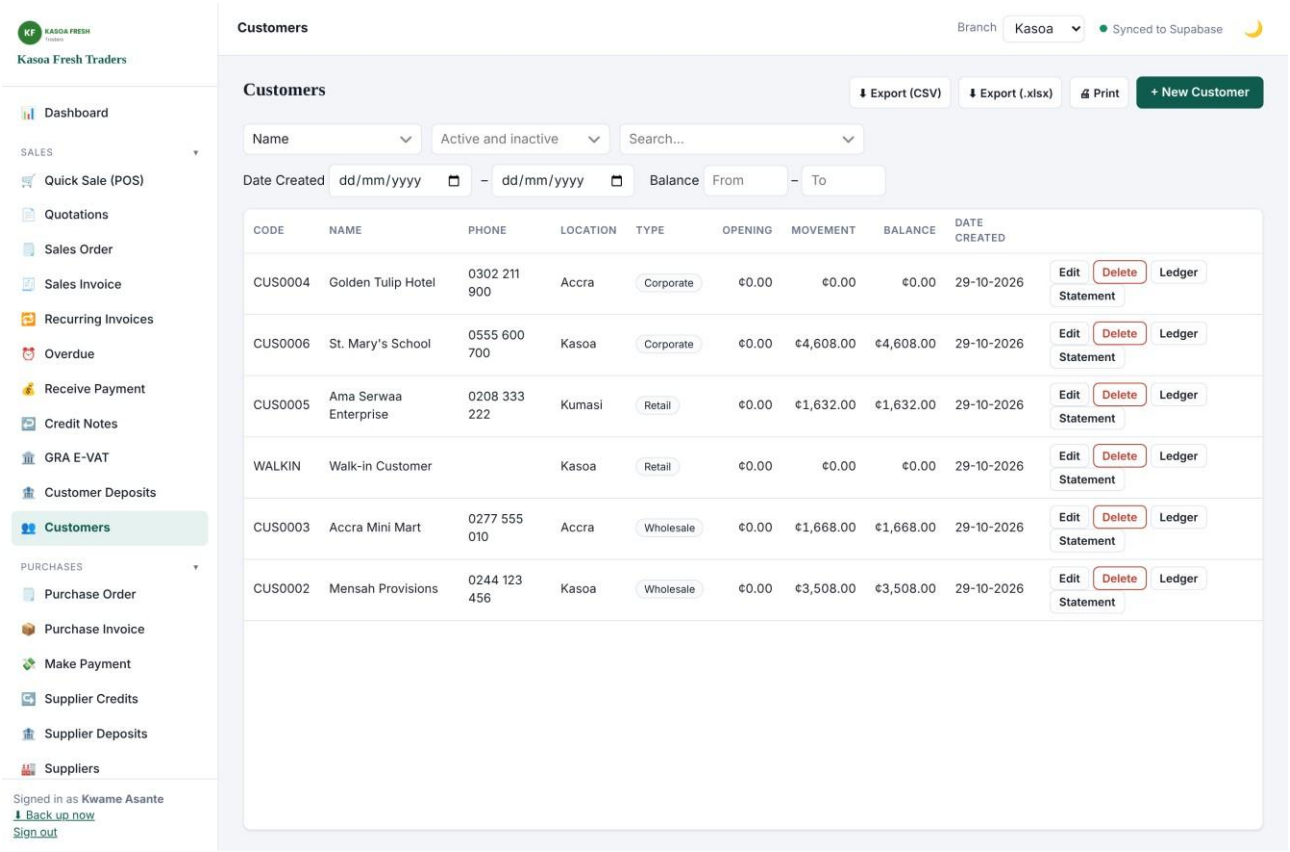

5. Customers, suppliers and products

These three lists are used on almost every form, so set them up before you start entering transactions. Each one can also be filled from a spreadsheet with **Admin / Settings > General Settings > Import Data** (section 3.3).

Every list has the same tools at the top: a search box with a **Search by** choice, a status filter (**Active and inactive**, **Active only**, **Inactive only**), **Export (CSV)**, **Export (.xlsx)** and **Print**. Click a column heading to sort. Totals sit at the bottom of the money columns.

5.1 Customers

Open **Sales > Customers**.

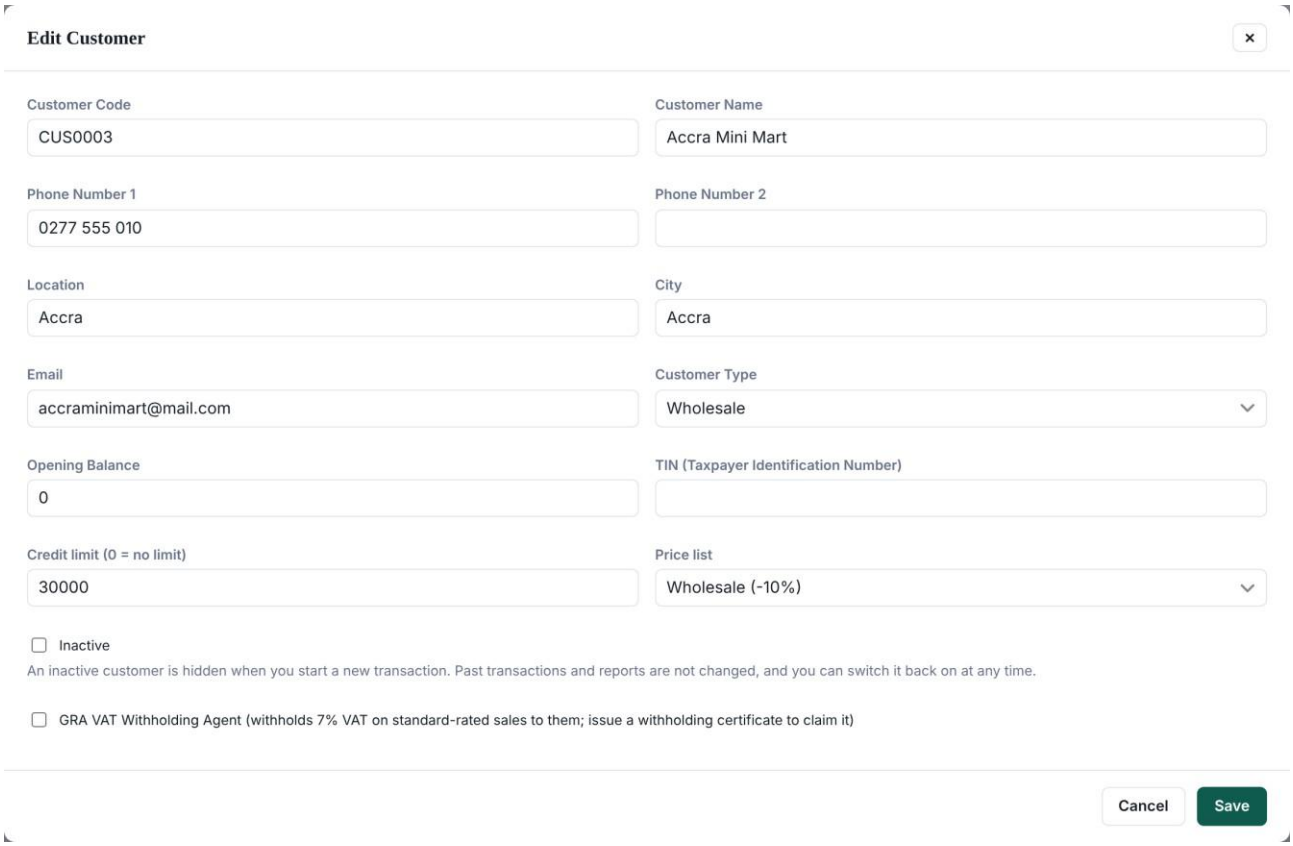

The customer list

The list shows each customer's code, name, phone, location, type, opening balance, movement and balance. The buttons on each row are **Edit**, **Delete** (Full rights only), **Ledger** and **Statement**.

Adding a customer

1. Click **+ New Customer**.
2. Fill in the form.
3. Click **Save**.

New Customer

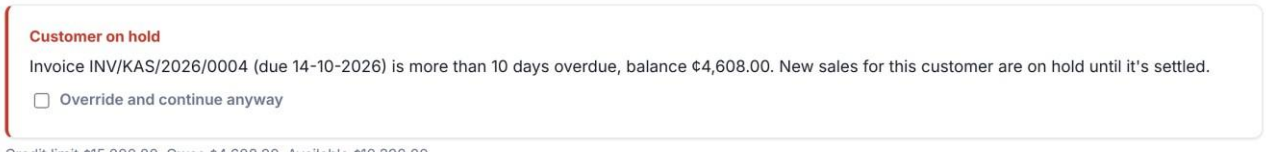

Field	What to enter
Customer Code	A short unique code. The next free code (CUS0007 and so on) is suggested.
Customer Name	As it should print on invoices.
Phone Number 1 and 2	Phone 1 is used for WhatsApp when you share invoices, reminders and statements.
Location, City	Where the customer is. Shown in the list and on documents.
Email	Used when you share documents by email.
Customer Type	Your own groups, for example Retail, Wholesale or Corporate. The list is kept in Accounts Settings and Defaults > Types & Locations (section 3.4).
Opening Balance	What the customer already owed you on the day you started using the program (section 3.8).
TIN	The customer's Taxpayer Identification Number. It prints on tax invoices and the E-VAT register.
Credit limit (0 = no limit)	The most this customer may owe you.
Price list	**Standard prices**, or one of your price lists, for example Wholesale (10% off). Prices on new invoices, quotations, orders and Quick Sale follow it (section 3.4).
Inactive	Hides the customer from new transactions (section 5.4).
GRA VAT Withholding Agent	Tick for a customer appointed by GRA to withhold VAT (section 6.1).

Credit limit and credit hold

The program protects you from selling on credit to customers who owe too much or pay late:

Credit limit: when you pick the customer on an invoice, the form shows their limit, what they owe and what is available. If a credit invoice would take them over the limit, saving stops with an **Over the credit limit** box that shows by how much. Tick **Override and continue anyway** if you decide to go ahead.

Customer on hold: if any invoice of the customer is more than **10 days** past its due date and still unpaid, a red **Customer on hold** box appears on the invoice. New sales are held until it is paid, unless you tick **Override and continue anyway**.

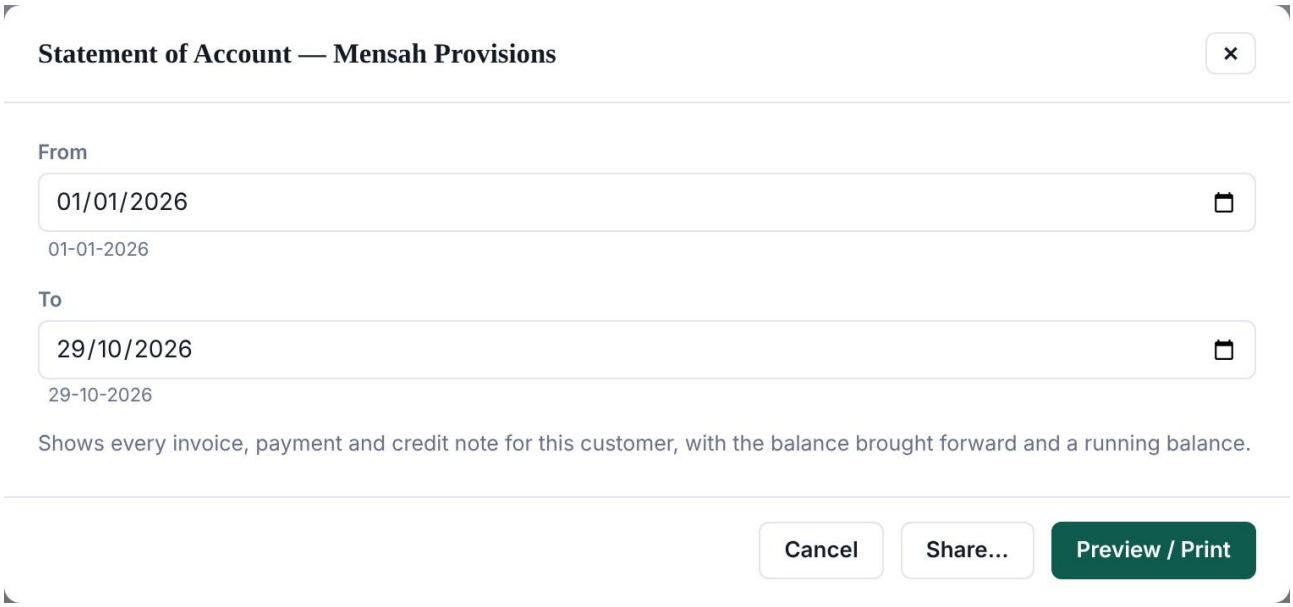

A customer on hold

Ledger and statement

Ledger shows every invoice, receipt, credit note and journal for the customer with a running balance. Click a line to open the document.

Statement asks for the dates (From and To) and gives a **Statement of Account** with the balance brought forward and a running balance. Click **Preview / Print** to print or save as PDF, or Share… to send it by WhatsApp or email.

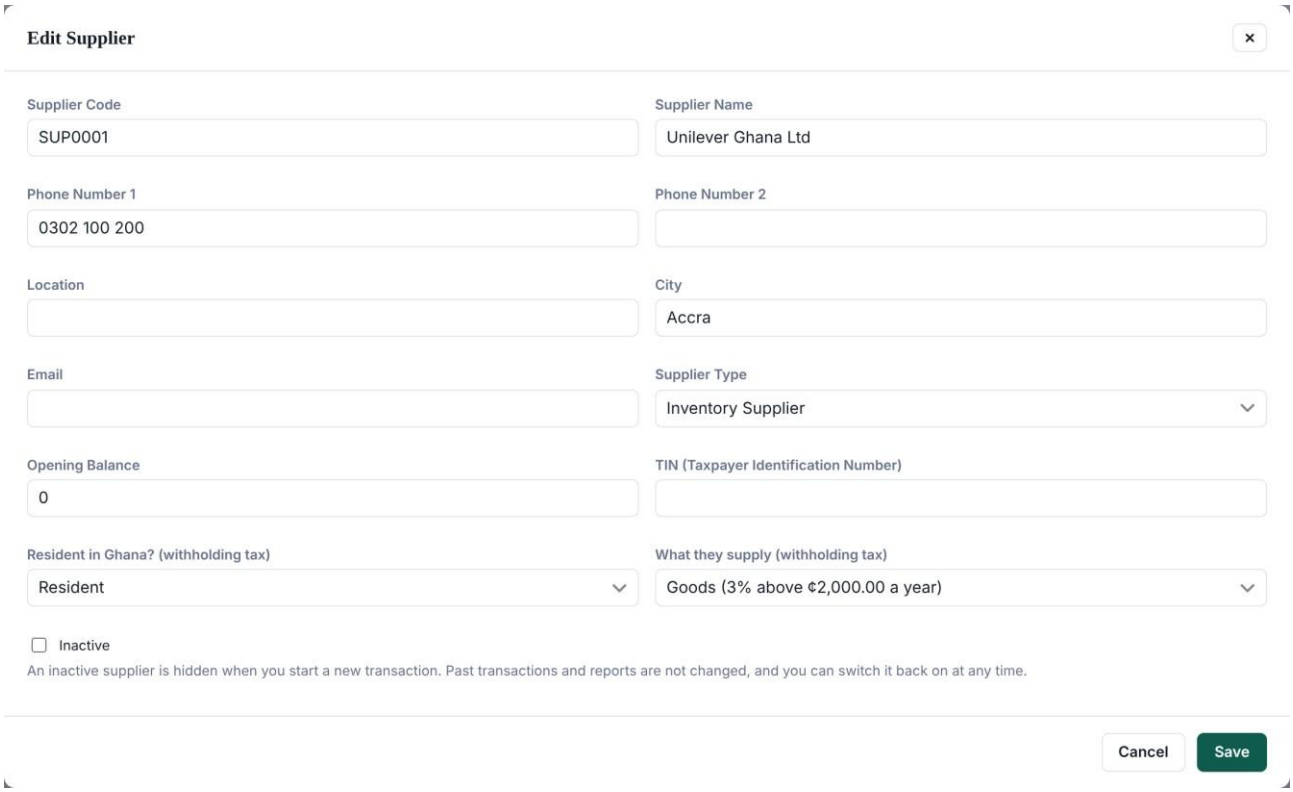

Statement of Account

To send statements to every customer at once, use Statements for everyone… on the Overdue screen (section 6.7).

5.2 Suppliers

Open **Purchases > Suppliers**. The list and the buttons are the same as for customers.

New Supplier

The fields are the same as a customer's, without the credit limit and price list, and with two more fields for withholding tax:

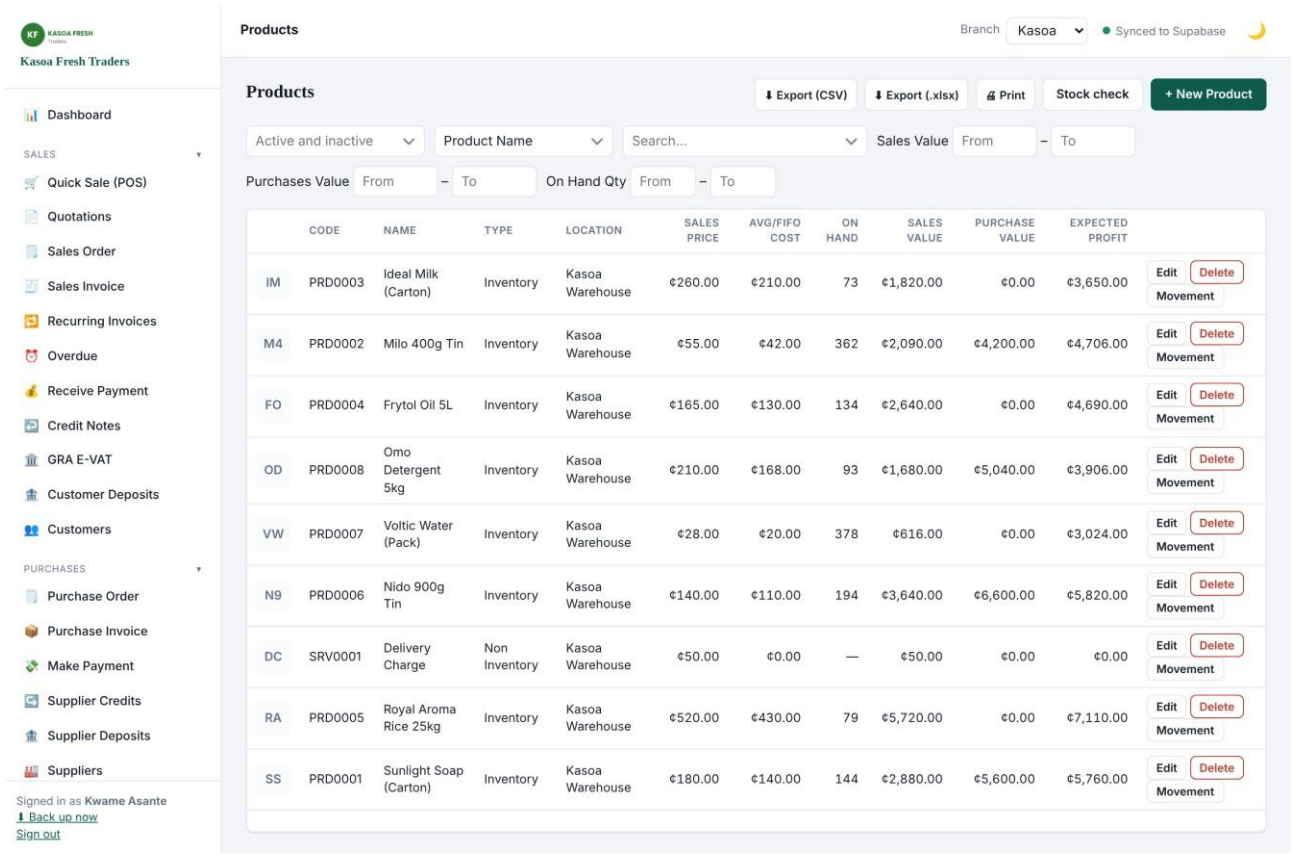

Field	What to enter
Supplier Type	**Inventory Supplier** for suppliers of stock (they appear on purchase orders and purchase invoices) or **Expenses Supplier** for suppliers of services and running costs, such as ECG or your landlord (they appear on expenses and Pay Expense).
Resident in Ghana?	**Resident**, or **Non-resident (flat 20%)**.
What they supply	**Goods** (3% above ¢2,000 a year), **Works** (5%), **Services** (7.5%), or **Not subject / other**. A new Inventory Supplier starts as Goods.

These two fields decide the withholding tax worked out when you pay the supplier (section 7.8).

> **Tip:** Choose the Supplier Type carefully. A supplier marked Expenses Supplier does not appear on a purchase invoice, and an Inventory Supplier does not appear on an expense.

5.3 Products and services

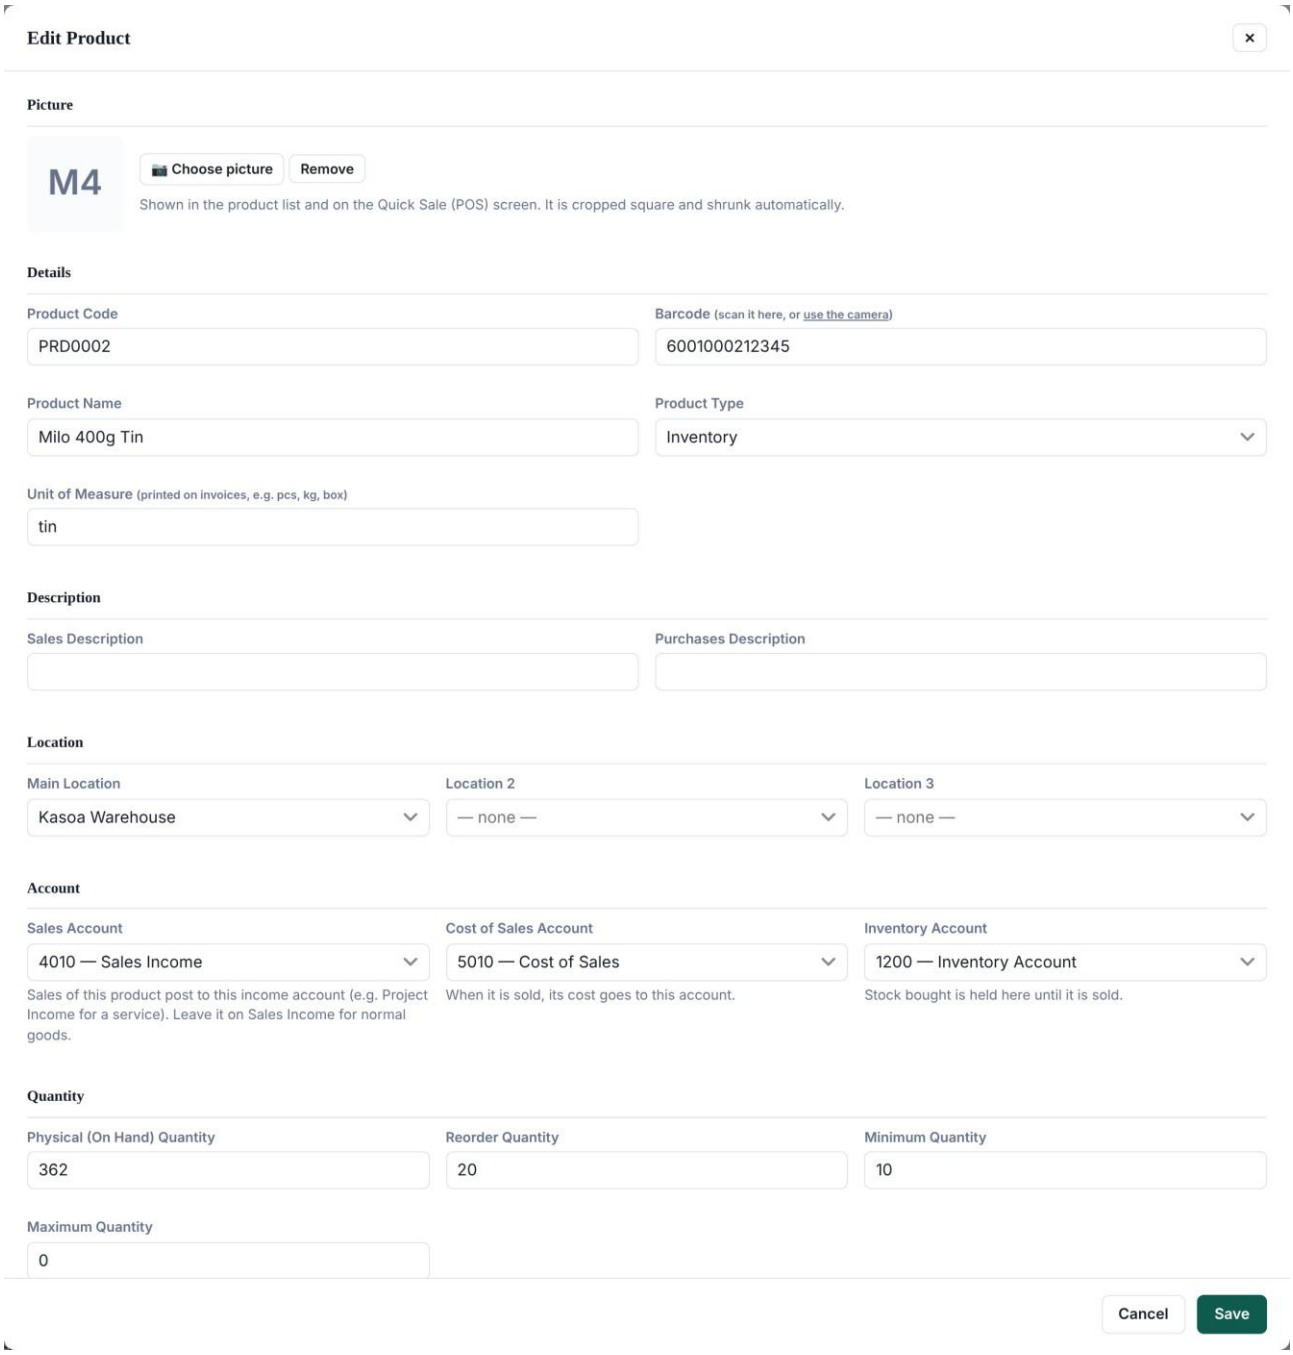

Open **Products > Product Information**.

The product list

The list shows the picture, code, name, type, location, sales price, average cost, quantity on hand, sales and purchase value and the expected profit. Each row has **Edit**, **Delete** and **Movement**. **Adding a product**

Click **+ New Product**, fill in the form and click **Save**.

New Product

Section	Field	What it does
Picture	Choose picture	A photo of the product, shown in the list and on Quick Sale. It is cropped square and made smaller automatically.
Details	Product Code	A short unique code.
	Barcode	Scan the barcode into this box, or use the camera on a phone. Quick Sale finds the product when the barcode is scanned.
	Product Name	As it should print.
	Product Type	**Inventory** (stock is counted) or **Non Inventory** (a service or a charge, such as Delivery Charge; no stock).
	Unit of Measure	Printed on invoices, for example pcs, kg, box, carton.
	Sales and Purchases Description	Optional wording for sales documents and for purchase documents.
Location	Main Location, Location 2, Location 3	Where the product is usually kept. With branches, stock is followed in every location (section 8.2).

Section	Field	What it does
Account	Sales Account	The income account its sales go to. Leave it on Sales Income for normal goods; choose another, such as Delivery Charges or Project Income, for a service.
	Cost of Sales Account	Where its cost goes when it is sold.
	Inventory Account	Where the stock is held until it is sold.
Quantity	Initial Quantity	The quantity on hand when you start (section 3.8).
	Reorder, Minimum and Maximum Quantity	Used for stock warnings and the Reorder Out-of-Stock purchase order (section 7.1).
Cost / Sales	Initial Value (total cost)	The total cost of the initial quantity, not the cost of one.
	Sales Price	The normal selling price before VAT.
	Latest Cost	The last price paid. It updates when you post a purchase.
	Inactive	Hides the product from new transactions (section 5.4).
	Show on Quick Sale (POS)	Untick for items never sold at the till. They can still go on invoices, quotations and orders.

How stock is valued

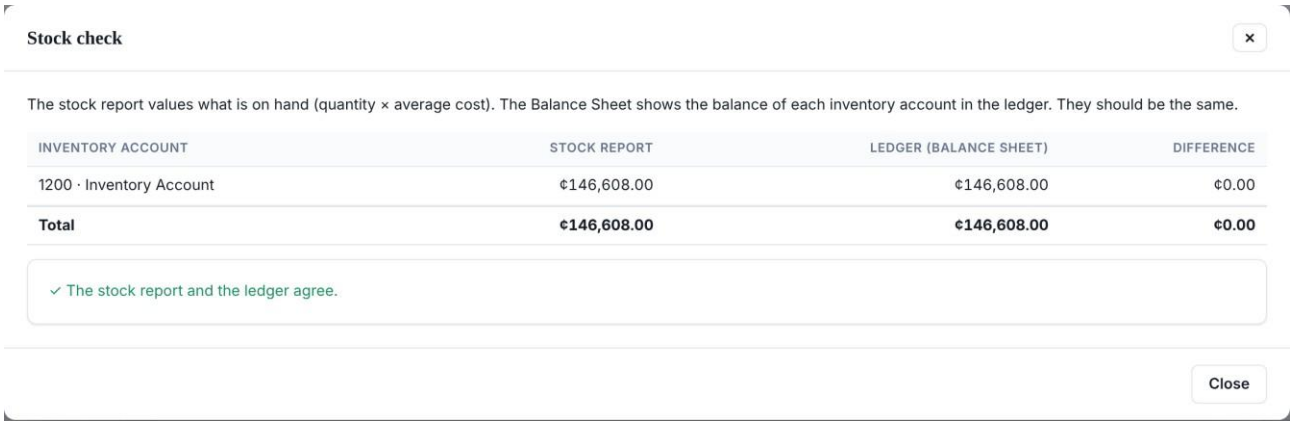

Stock is valued **first in, first out (FIFO)**. Each purchase adds a "layer" at its own cost; each sale takes the cost from the oldest layer first. The cost of sales posted on each invoice is therefore the real cost of the goods sold. The product list shows the average of the layers still on hand.

Stock status

Status	When
No Stock	Nothing on hand
Reorder	On hand is at or below the Minimum Quantity
Overstocking	On hand is above the Maximum Quantity (when one is set)
OK	Anything else

Movement opens every sale, purchase, credit note, transfer and adjustment of the product, with the quantity in, out and on hand after each one.

Stock check (button at the top of the list) compares the value of stock on the product list with the balance of each inventory account in the ledger. The two should agree; if they do not, the window shows the difference for each account so you can find it.

Stock check

To change many selling prices at once, use **Bulk Price Update** in General Settings (section 3.3).

5.4 Making a record inactive

When you stop dealing with a customer or supplier, stop selling a product, or no longer want an account used, make it **Inactive** instead of deleting it. Open the record, tick **Inactive** and save. This works the same way on the chart of accounts, customers, suppliers and products.

An inactive record is hidden when you start a new transaction (invoices, purchases, expenses, quotations, journal lines and Quick Sale).

Its history does not change. It stays in the list, in reports and on old documents, and still shows when you open an old document to edit it.

Inactive customers and suppliers do not appear in any list you pick from, including Receive Payment, Make Payment, Pay Expense, credit notes and journals. To take or make a payment for one, make them active first. A customer or supplier already on a document you are editing stays on it.

Use the status filter beside the search box to show active, inactive or all records. Inactive records are shown in grey with an **Inactive** tag.

To use the record again, open it, clear the tick and save.

The program asks you to confirm if the record still has a balance or stock. An account used in your settings (a default account, a payment method or a withholding rate) cannot be made inactive until you change that setting, and the walk-in customer used by Quick Sale cannot be made inactive.

Delete or Make inactive. A customer, supplier or product can be deleted only if it has never been used. Once it is on any document, ledger line, deposit, job, transfer or stock take, its **Delete** button is replaced by **Make inactive** (and **Make active** to undo), so old documents and reports always stay complete. A record entered by mistake and never used still shows Delete.

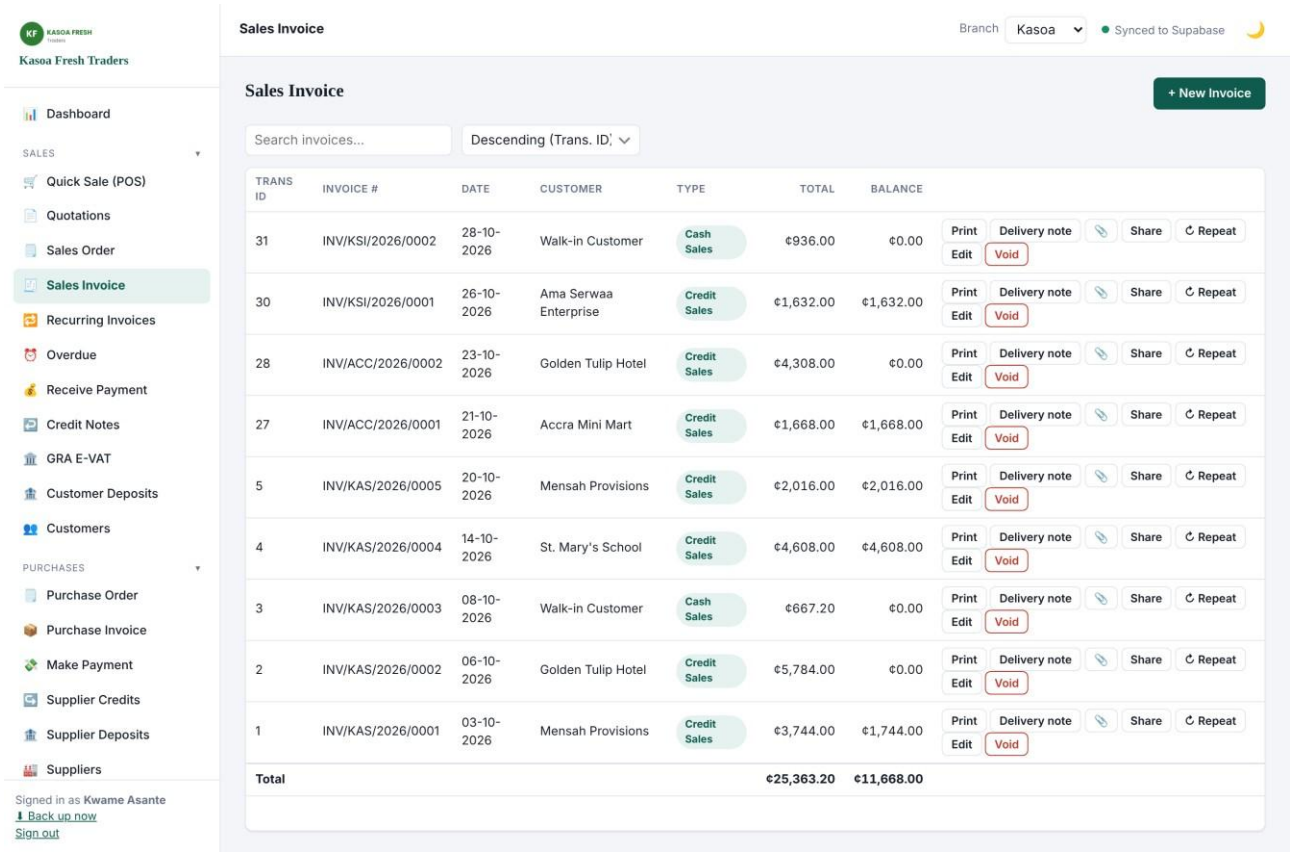

6. Selling

Everything to do with selling is in the **Sales** group of the menu: Quick Sale (POS), Quotations, Sales Order, Sales Invoice, Recurring Invoices, Overdue, Receive Payment, Credit Notes, GRA E-VAT, Customer Deposits and Customers. You see only the screens your role allows (chapter 4).

Forms in a company with branches. At the top of each sales form the program shows the **Branch** you are working in (change it with the Branch box at the top of the screen, section 4.6), the **Stock location** the goods leave from (only the branch's own locations are offered) and the **Business unit** for lines whose account has none. The document number carries the branch code, for example INV/KAS/2026/0006. Without branches these boxes do not appear.

6.1 Raising a sales invoice

Open **Sales > Sales Invoice**.

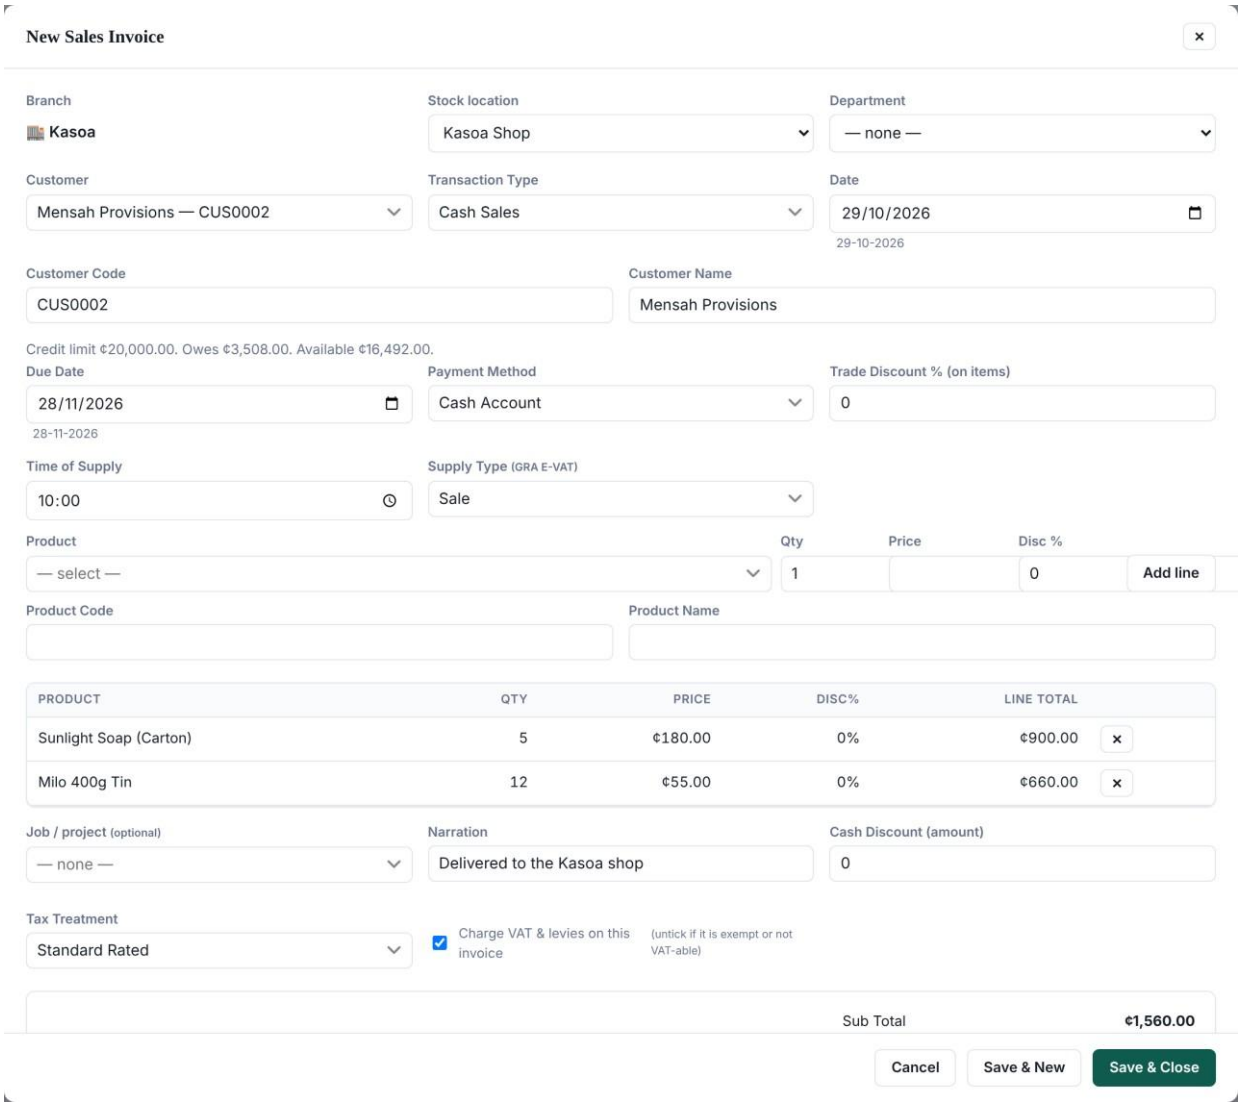

The Sales Invoice list

Each invoice in the list has these buttons:

Button	What it does
Print	Opens the invoice in your chosen design (section 3.6) to print or save as PDF.
Delivery note	Prints a delivery note: the same goods and quantities, no prices, a Checked column and a line for the customer to sign.
	Attachments: add up to 6 photos or PDFs (for example the customer's order or a signed delivery note). Photos are shrunk automatically; a PDF can be up to 700 KB. The number of files shows on the button.
Share	Sends the invoice by WhatsApp or email (section 6.11).
Repeat	Makes this invoice repeat automatically (section 6.6).
Edit	Opens the invoice to change it. Saving posts it again.
Void	Cancels the invoice (see below).

Entering an invoice

1. Click **+ New Invoice**.
2. Choose the **Customer**. The code and name appear, with the credit limit (if any) and a hold warning if the customer pays late (section 5.1).
3. Choose the **Transaction Type**: **Credit Sales** (the customer pays later) or **Cash Sales** (paid now; choose the **Payment Method**, for example Cash Account or Mobile Money).
4. Check the **Date** and **Due Date**. The due date comes from your default terms (section 3.5).
5. **Time of Supply** is filled with the time now. It prints on the tax invoice and starts the 24-hour E-VAT clock (section 6.9).
6. **Supply Type (GRA E-VAT):** Sale, Hire, lease or rental, Exchange, or Own supply. Most sales are Sale.
7. Add the lines: choose the **Product**, type the **Qty**, check the **Price** (it follows the customer's price list) and any **Disc %**, then click **Add line**. Repeat for each item. The product list shows the quantity on hand; you cannot sell more stock than you have in that location.
8. Optional: **Trade Discount %** (a discount on every item), **Cash Discount (amount)**, a **Job / project** (section 9.7) and a **Narration**.
9. **Tax Treatment: Standard Rated**, or **Relief Supply** (no VAT, NHIL or GETFund, under section 38 of the VAT Act). Untick **Charge VAT & levies on this invoice** if the sale is exempt. (This tick box is hidden if Charge Tax is set to No in Accounts Settings and Defaults.)
10. Check the totals at the bottom: Sub Total, NHIL 2.5%, GETFund 2.5%, VAT 15%, Total, Cash Discount and Net Amount.
11. Click **Save & Close**, or **Save & New** to start the next one.

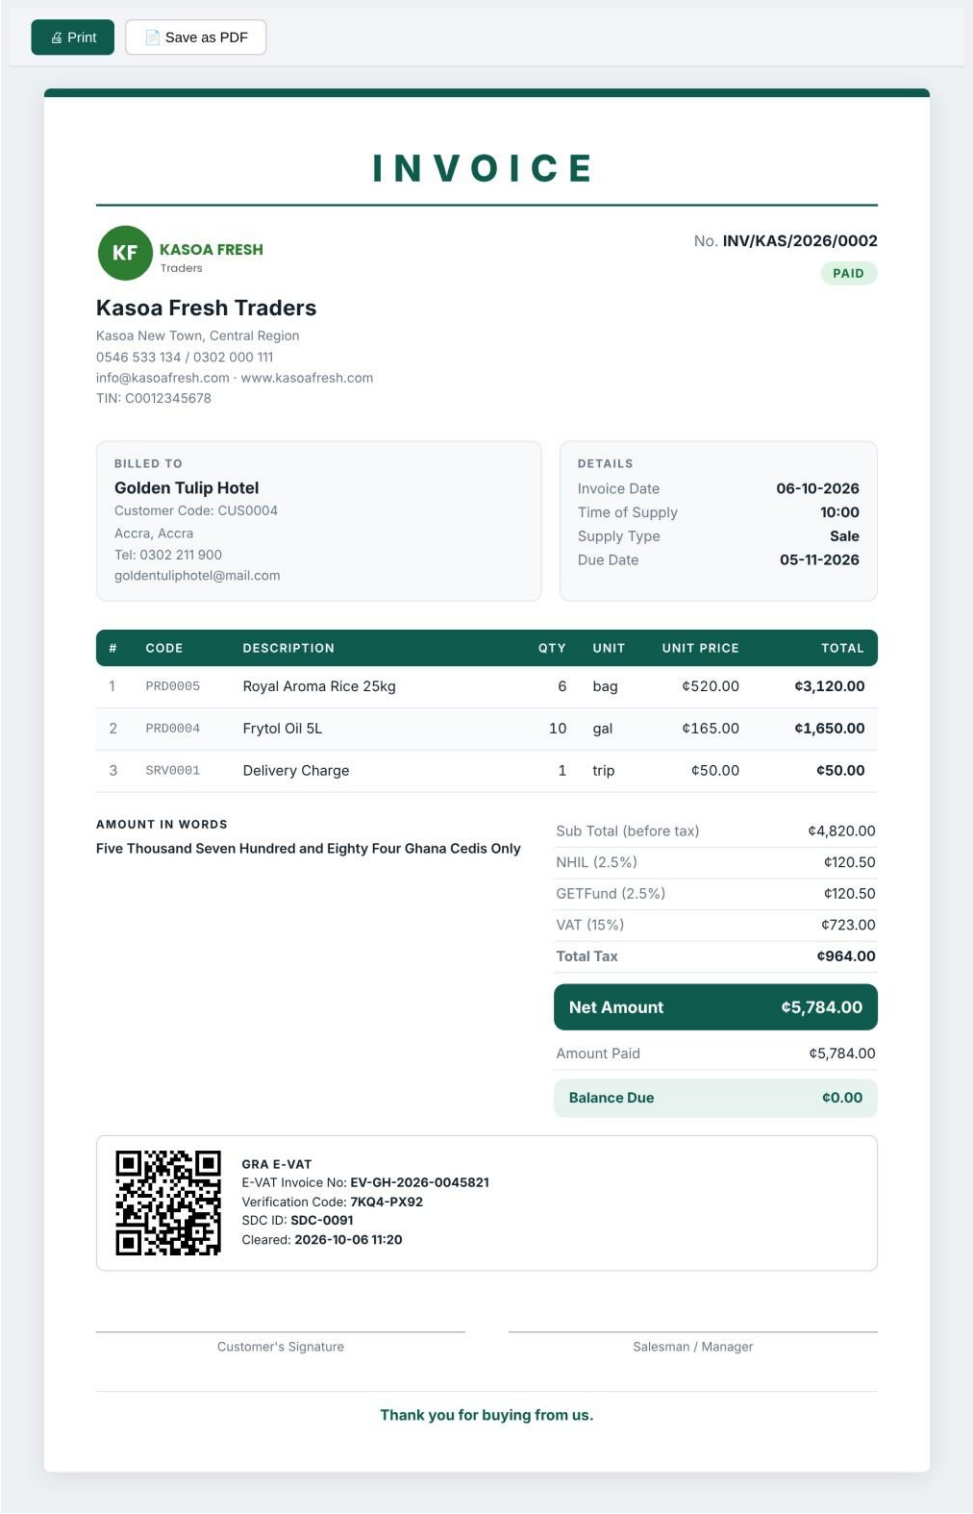

New Sales Invoice

What saving does. For a credit sale the customer's account (Debtors) is debited with the net amount; for a cash sale the payment account is. Sales Income (or each product's own sales account) is credited with the amount before tax, and Output VAT, NHIL and GETFund with the taxes. For stock items the cost is taken out of Inventory at FIFO cost and put into Cost of Sales (section 5.3).

Customers who withhold VAT. If the customer is ticked as a **GRA VAT Withholding Agent** (section 5.1), the totals show **VAT Withheld by Customer (7%)**: 7% of the amount before tax is taken off what the customer pays you. Ask the customer for the VAT withholding certificate; the amount is held in the VAT Withholding Tax Credit account to claim against your VAT.

Foreign currency. If you have added currencies (section 13.1), you can pick one on the invoice; it prints with its foreign-currency equivalent while your books stay in cedis.

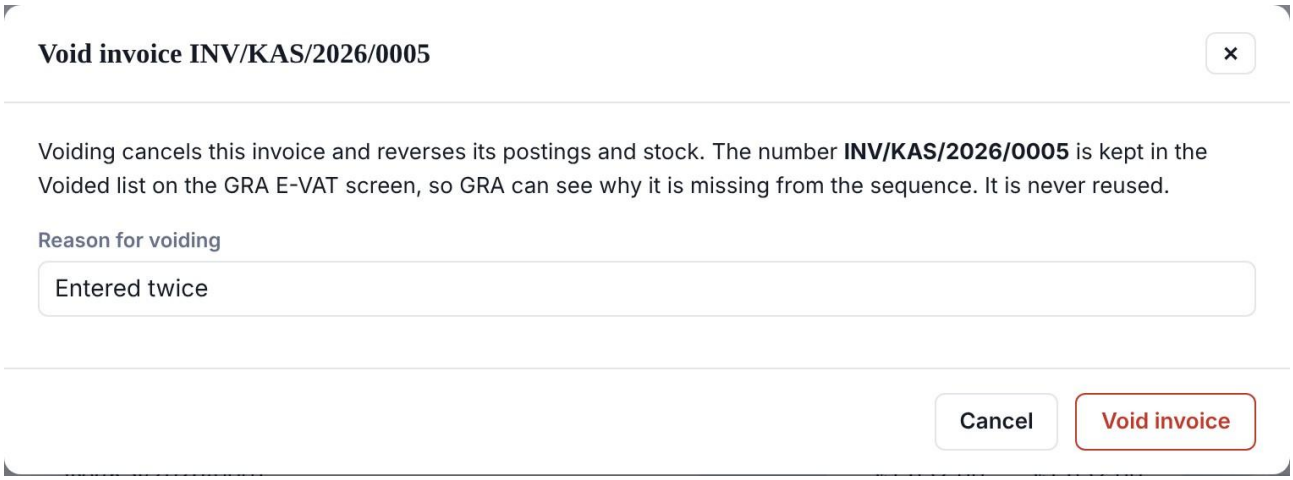

Amount in words. The printed invoice spells out the net amount in cedis, for example "Five Hundred Ghana Cedis Only", "One Thousand and Fifty Ghana Cedis Only" or "Seventy Five Pesewas Only". On a foreign-currency invoice a second line, **Equivalent in USD** (or the currency used), spells out the amount in that currency, for example "Forty US Dollars Only". Receipts, orders, quotations, vouchers and payslips use the same wording.

A printed invoice

Voiding an invoice

Invoices are not deleted. Click **Void**, type the **Reason for voiding** (for example "Wrong customer, entered twice") and click **Void invoice**.

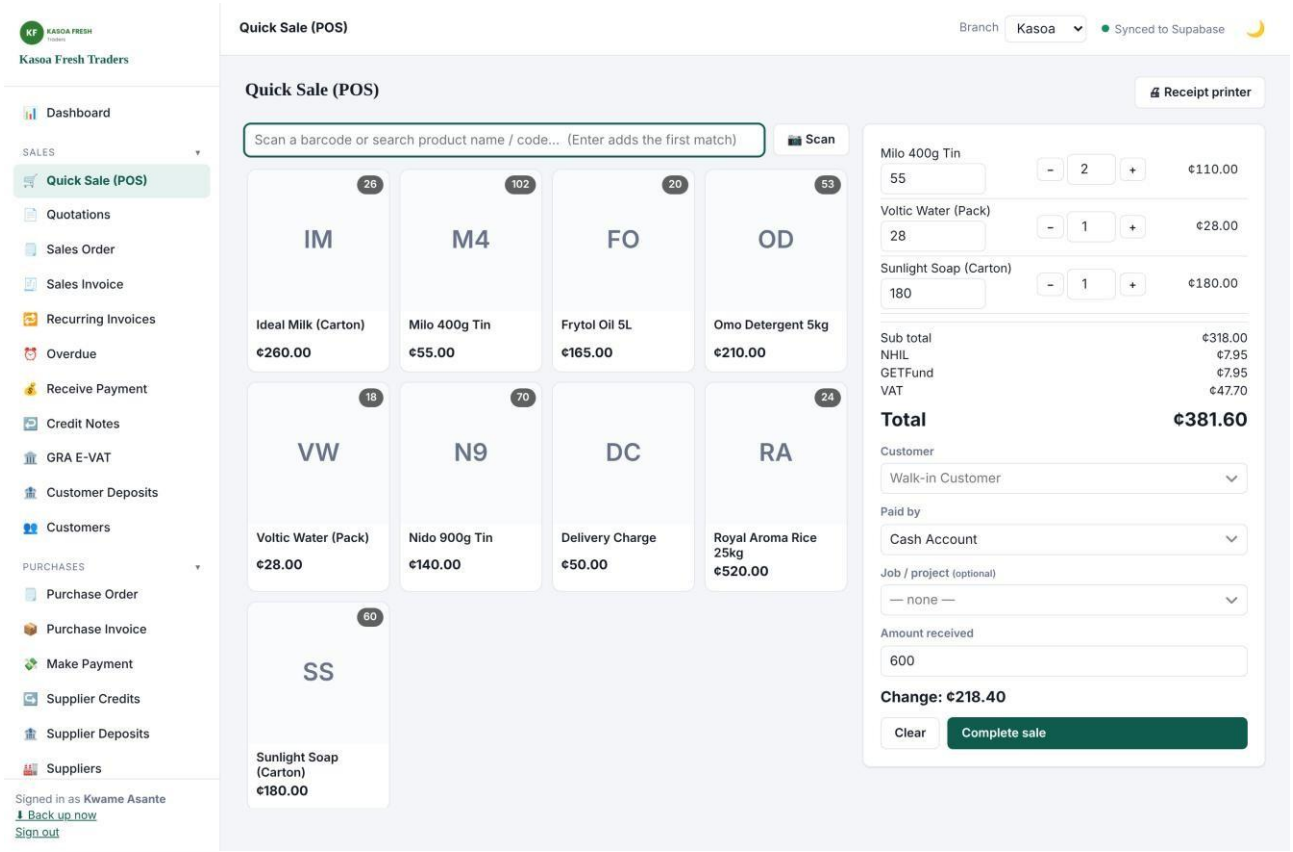

Void invoice

Voiding reverses the postings and puts the stock back. The number is never used again: it is kept in the **Voided** list on the GRA E-VAT screen with the reason, so GRA can see why it is missing from the sequence. You cannot void an invoice that has credit notes against it (delete those first) or one that has been cleared on GRA E-VAT (issue a credit note instead).

6.2 Quick Sale (POS)

Use **Quick Sale (POS)** at the counter. Every sale there is an ordinary cash sales invoice, numbered in the same series and posted in the same way.

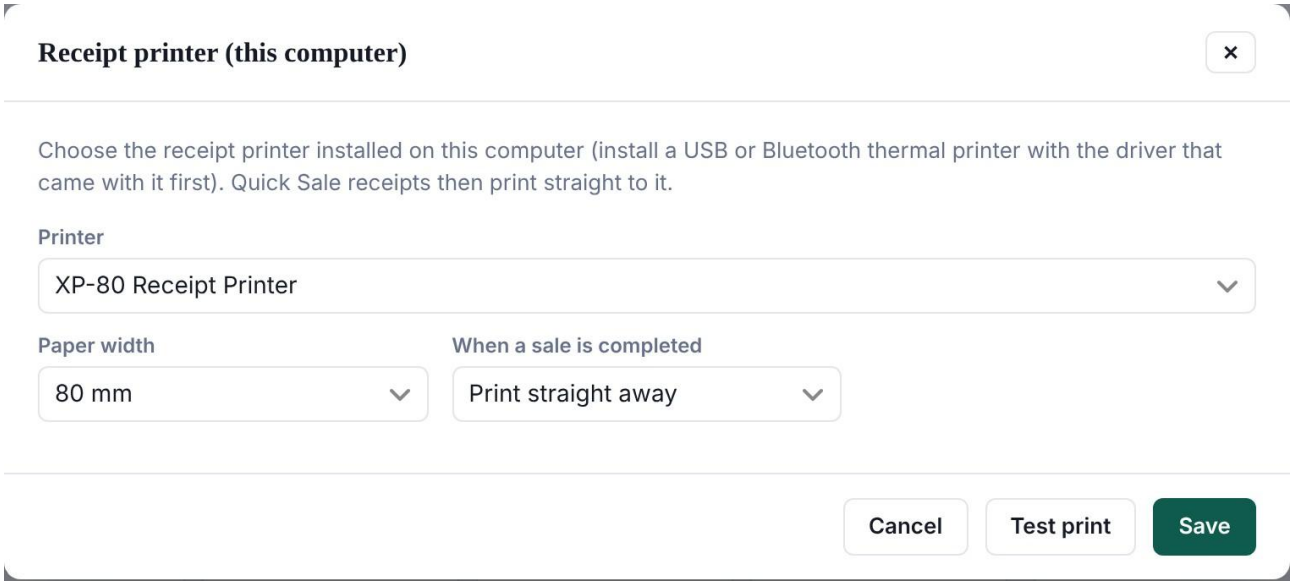

Quick Sale

1. Tap a product tile, or type in the search box. With a barcode scanner, scan the item: an exact barcode match is added and the box is cleared for the next scan. On a phone, tap 📷 **Scan** to use the camera.

2. Each tile shows the picture, price and the quantity left in your branch; an item with none left shows **Out**. Only products with **Show on Quick Sale** ticked appear (section 5.3).
3. In the basket, change the quantity with and **+** or type it. You can change the price of a line.
4. Choose the **Customer** (Walk-in Customer unless you pick a named one; prices follow that customer's price list), **Paid by** (cash, bank or mobile money) and, if you use jobs, the **Job / project**.
5. Type the **Amount received**. The **Change** (or how much is short) shows at once.
6. Click **Complete sale**. The receipt prints and stock goes down straight away. **Clear** empties the basket.

On a phone, the basket is a bar at the bottom of the screen showing the number of items and the total; tap it to open the basket.

Receipt printer (desktop app). Click **Receipt printer**, choose the **Printer** installed on the computer, the **Paper width** (80 mm or 58 mm) and **When a sale is completed**: **Print straight away** or **Show the print window**. Click **Test print**, then **Save**. This is remembered for that computer.

Receipt printer on a computer

Bluetooth receipt printer (Android). Pair the printer in the phone's Settings > Bluetooth first (the code is usually 0000 or 1234). Then click **Receipt printer**, tap **Find paired printers**, choose it, and set the **Paper width**, whether to print the **E-VAT QR code** and the **Paper cutter**. Click **Test print**, then **Save**.

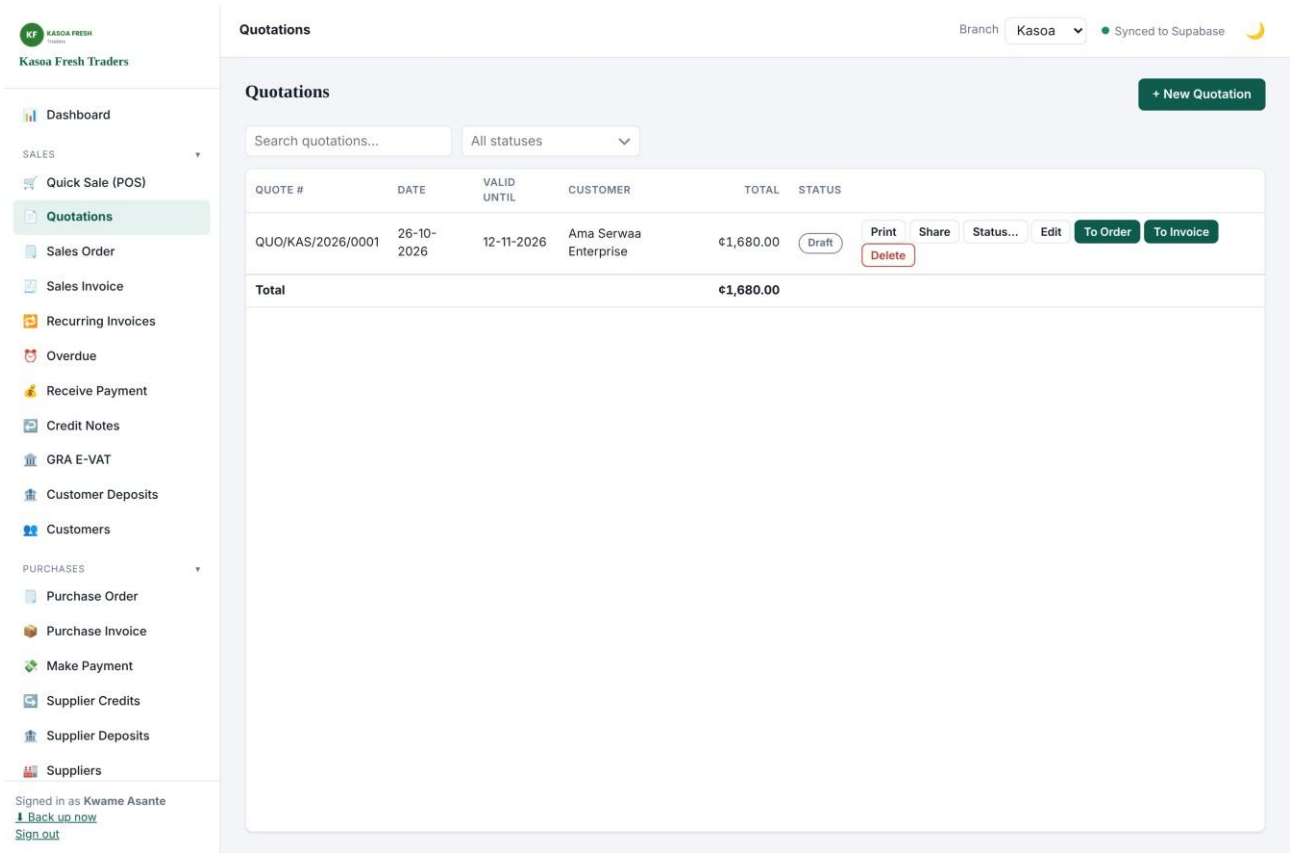

Offline. If the internet goes off, Quick Sale keeps selling (if allowed in Working Offline, section 3.3). Each sale gets the till letter in its number and is uploaded when the connection returns (section 2.8).

Cash-up. At the end of the day count the till with **Petty Cash & Cash-up > Cash-up / count** (section 7.6).

6.3 Quotations

A **quotation** is an offer. It posts nothing and does not touch stock. Open **Sales > Quotations** and click **+ New Quotation**.

1. Choose the **Customer**, the **Date** and **Valid Until** (two weeks ahead to start with).
2. Add the product lines as on an invoice.
3. Type any **Terms / Notes** to print on the quotation, and set the VAT tick box.
4. Click **Save & Close**.

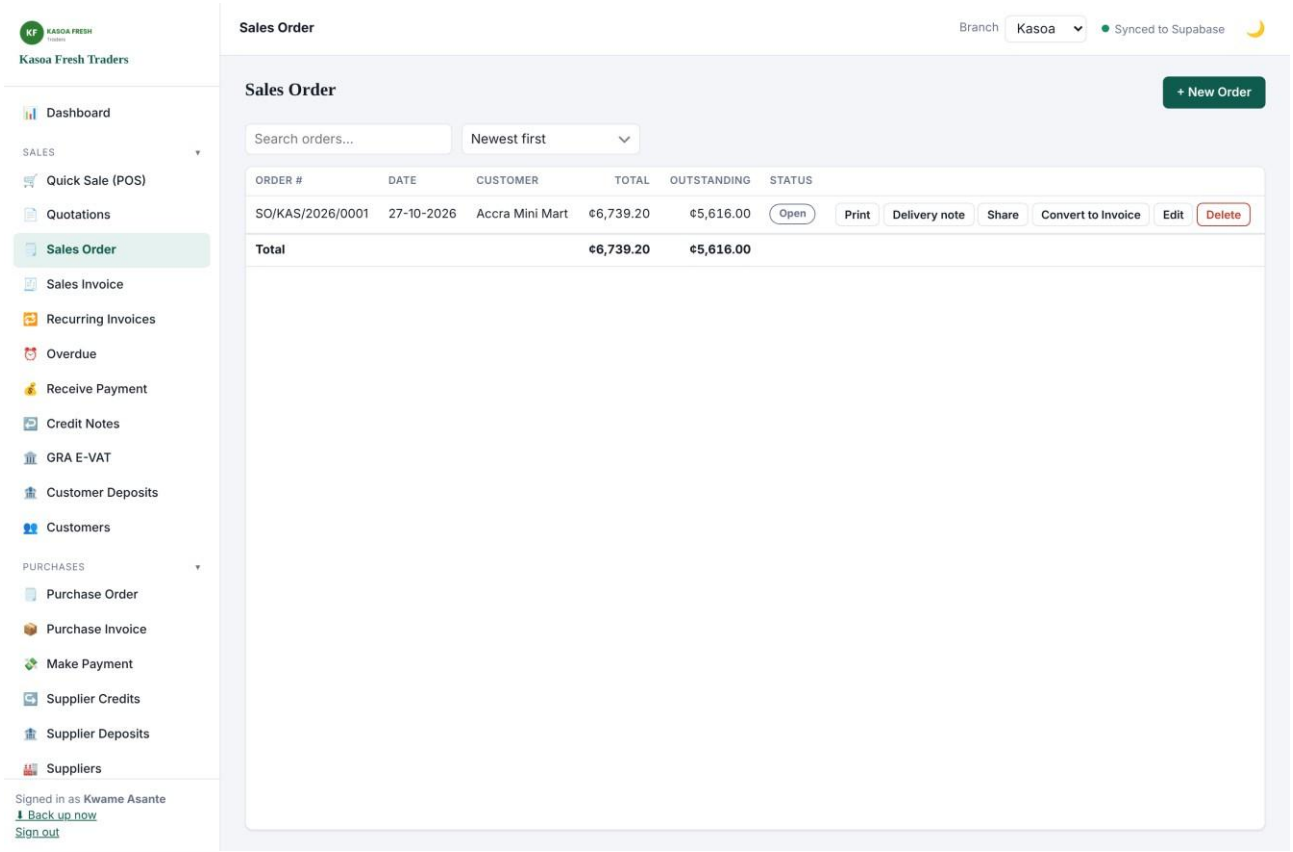

Quotations

Each quotation has a status: **Draft**, **Sent**, **Accepted**, **Declined**, **Expired** (automatic, once Valid Until has passed without an answer) or **Converted**. Use Status… to change it, and the status filter to list, for example, only accepted quotations. When the customer says yes, click **To Order** (makes a sales order) or **To Invoice** (makes the sales order and opens the invoice from it at once). The lines are copied, so nothing is typed twice, and the quotation becomes **Converted**.

6.4 Sales orders

A **sales order** records a confirmed order that you will deliver later. It posts nothing. Open **Sales > Sales Order**, click **+ New Order**, choose the customer, the date and the optional **Required By** date, add the lines and save.

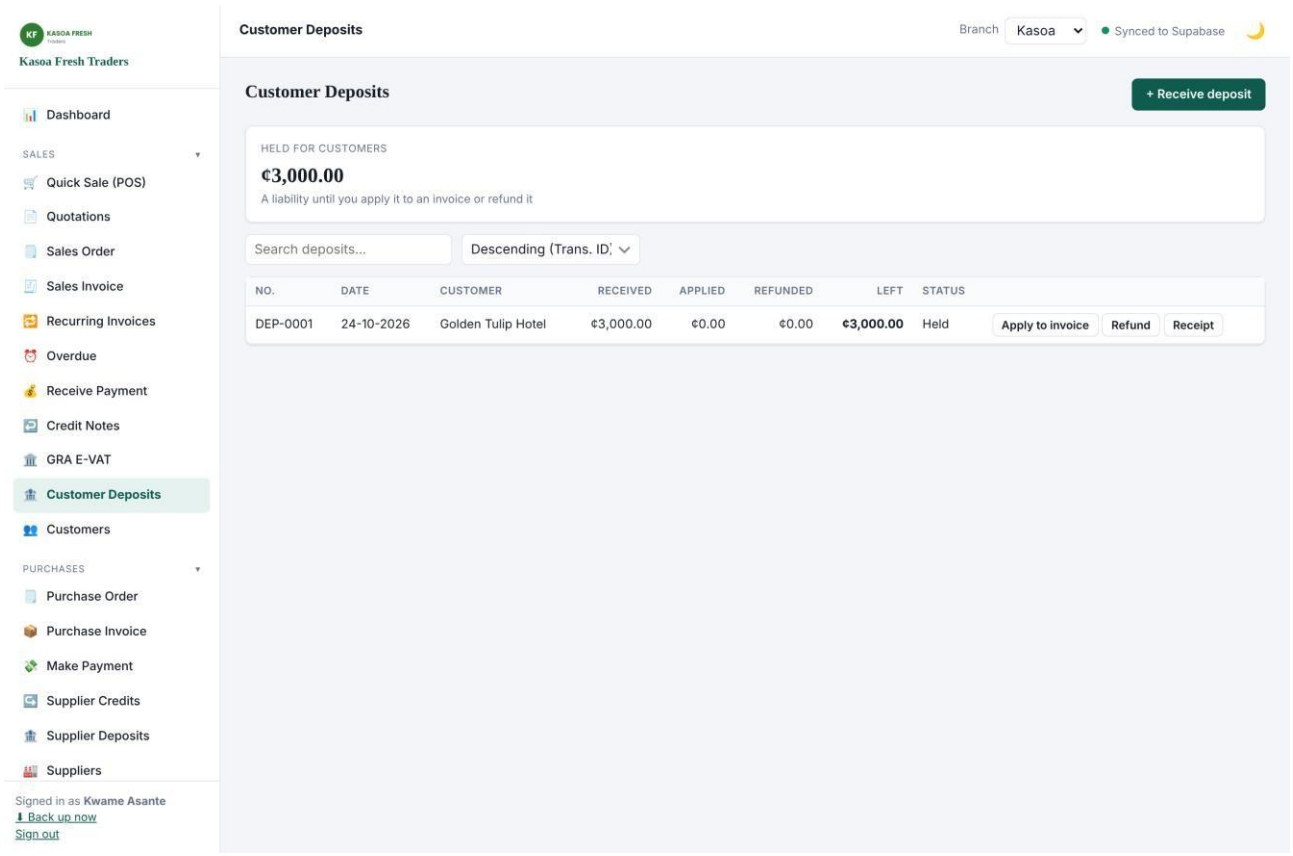

Sales orders

The list shows the total, what is still **Outstanding** and the status. **Delivery note** prints the goods to deliver. When you deliver, click **Convert to Invoice**: the invoice form opens with the lines still outstanding. If you do not have enough stock for a line, the program invoices what you have and leaves the rest outstanding on the order for a later invoice.

6.5 Customer deposits

Use **Sales > Customer Deposits** when a customer pays before you invoice.

Customer Deposits

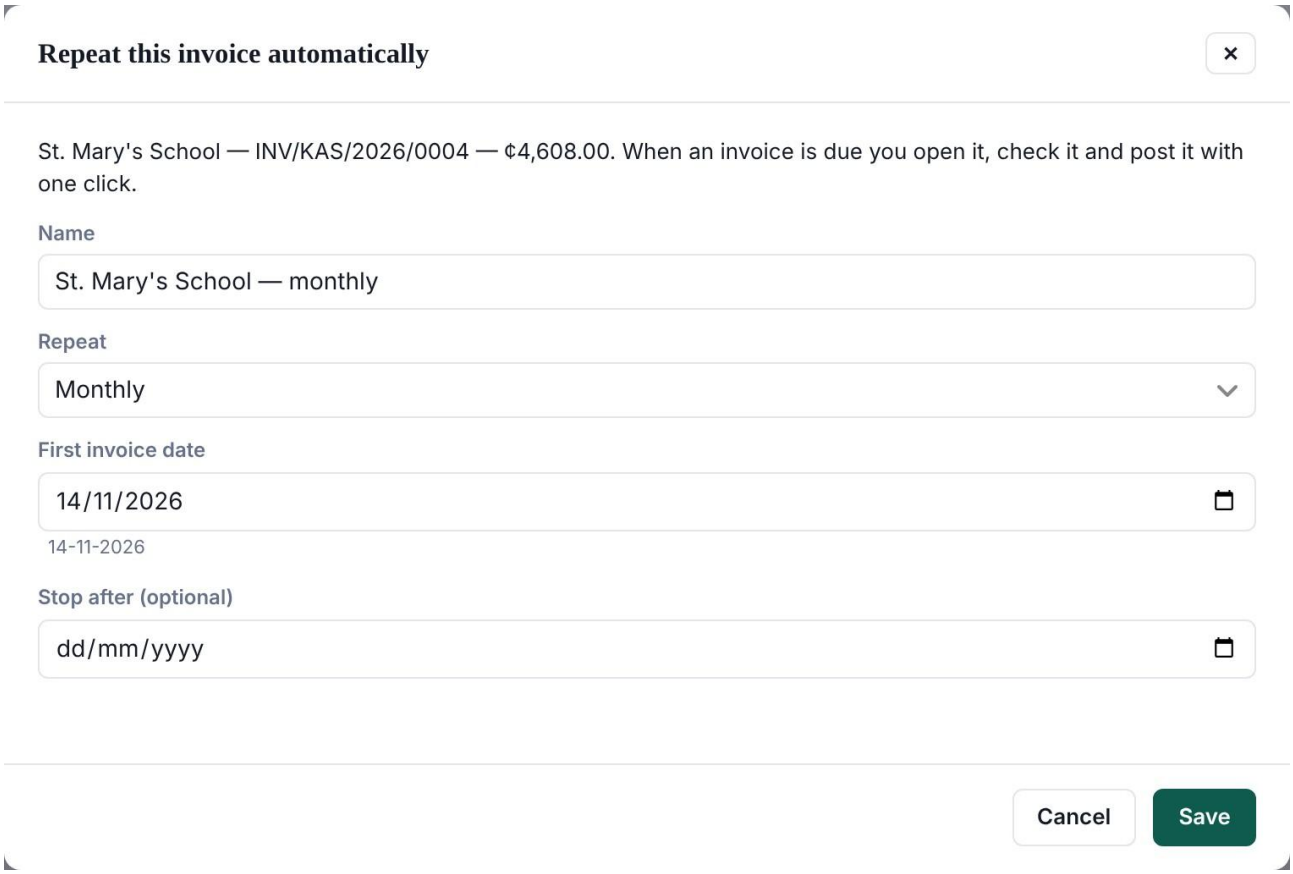

1. Click **+ Receive deposit**.
2. Choose the **Customer**, **Date**, **Amount**, **Received into** (cash, bank or mobile money), a **Reference / note** and, if you like, the **Job / project**.
3. Click **Save deposit**. This posts Dr the account received into, Cr **Customer Deposits** (a liability: you owe the customer the goods or the money).

The panel at the top shows the total **Held for customers**. When the invoice is raised, click **Apply to invoice** on the deposit, choose the invoice and the amount; this settles the invoice from the deposit. If the order is cancelled, click **Refund**, enter the amount and the account it is **Paid from**. **Receipt** prints a receipt for the deposit. Each deposit shows Received, Applied, Refunded, Left and its status: Held, Part used, Fully applied, Refunded, or Applied and refunded.

6.6 Recurring invoices

For rent, retainers, subscriptions and other sales that repeat:

1. Raise the first invoice as normal.
2. In the Sales Invoice list, click ↻ **Repeat** on it.
3. Give the schedule a **Name**, choose how often to **Repeat** (Weekly, Monthly, Quarterly, Every 6 months, Yearly), the **First invoice date** and, if it should end, **Stop after**.
4. Click **Save**.

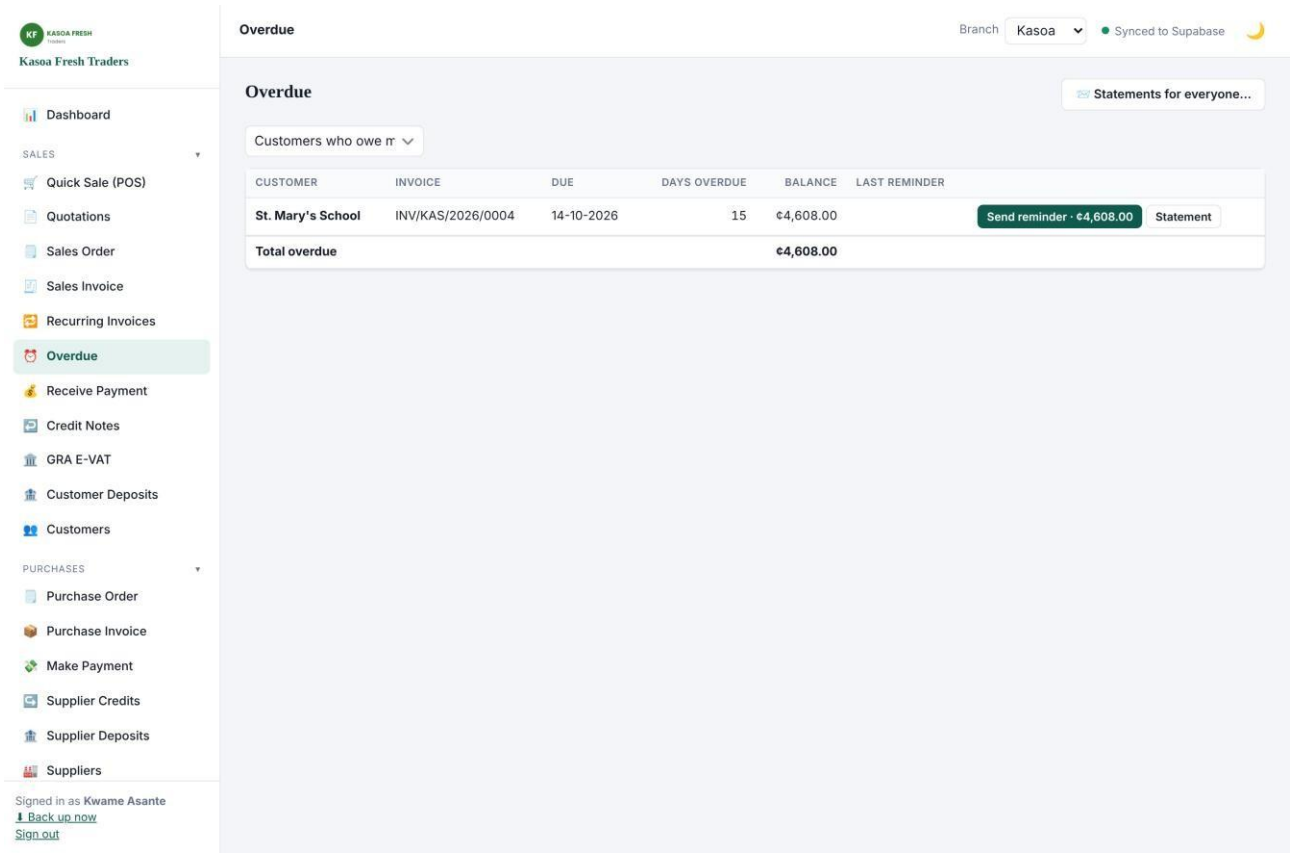

Repeat this invoice

When an invoice is due, it is listed in **Sales > Recurring Invoices** marked **due**. Click **Create invoice** to open it filled in, check it and post it. The list also has **Schedule** (change it), **Stop / Resume** and **Delete**.

6.7 Overdue invoices, reminders and statements

Sales > Overdue lists every unpaid invoice past its due date, oldest first, with the number of days late, the balance and the date of the last reminder. Switch between **Customers who owe me** and **Bills I owe suppliers**.

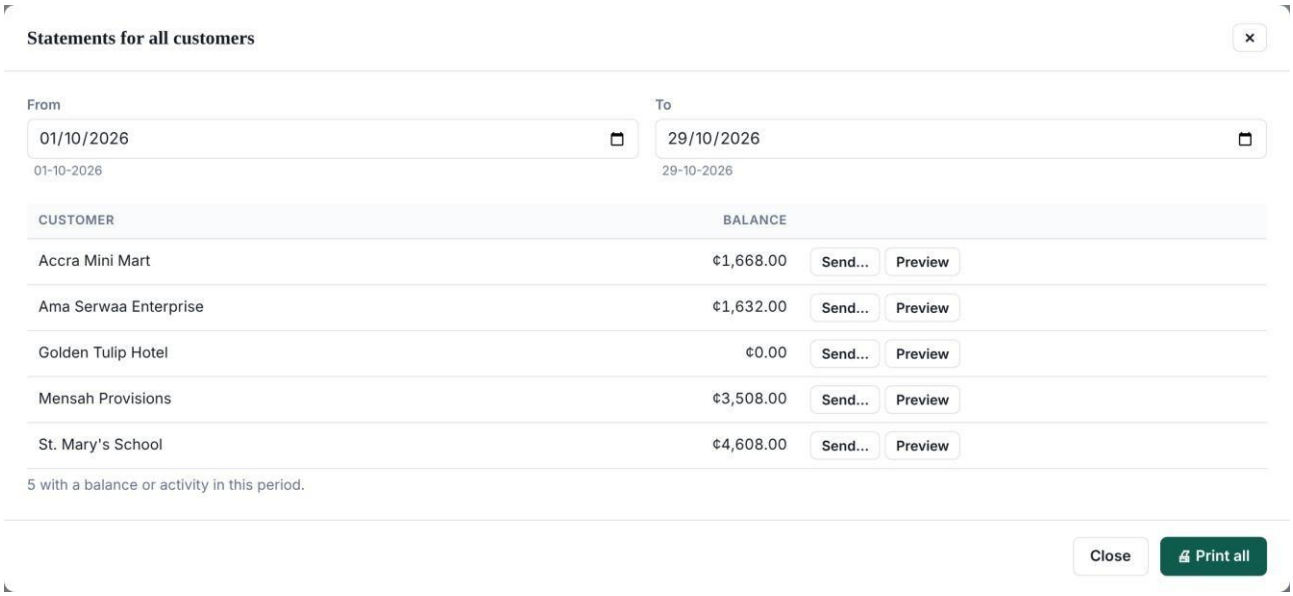

Overdue

Send reminder opens a ready-made, polite reminder for all of that customer's overdue invoices with the total, to send by WhatsApp or email. The date is recorded in the Last Reminder column.

Statement gives the customer's statement of account (section 5.1).

Statements for everyone… lists every customer with a balance or activity between the dates you choose, with Send… and **Preview** for each and **Print all** for the whole set.

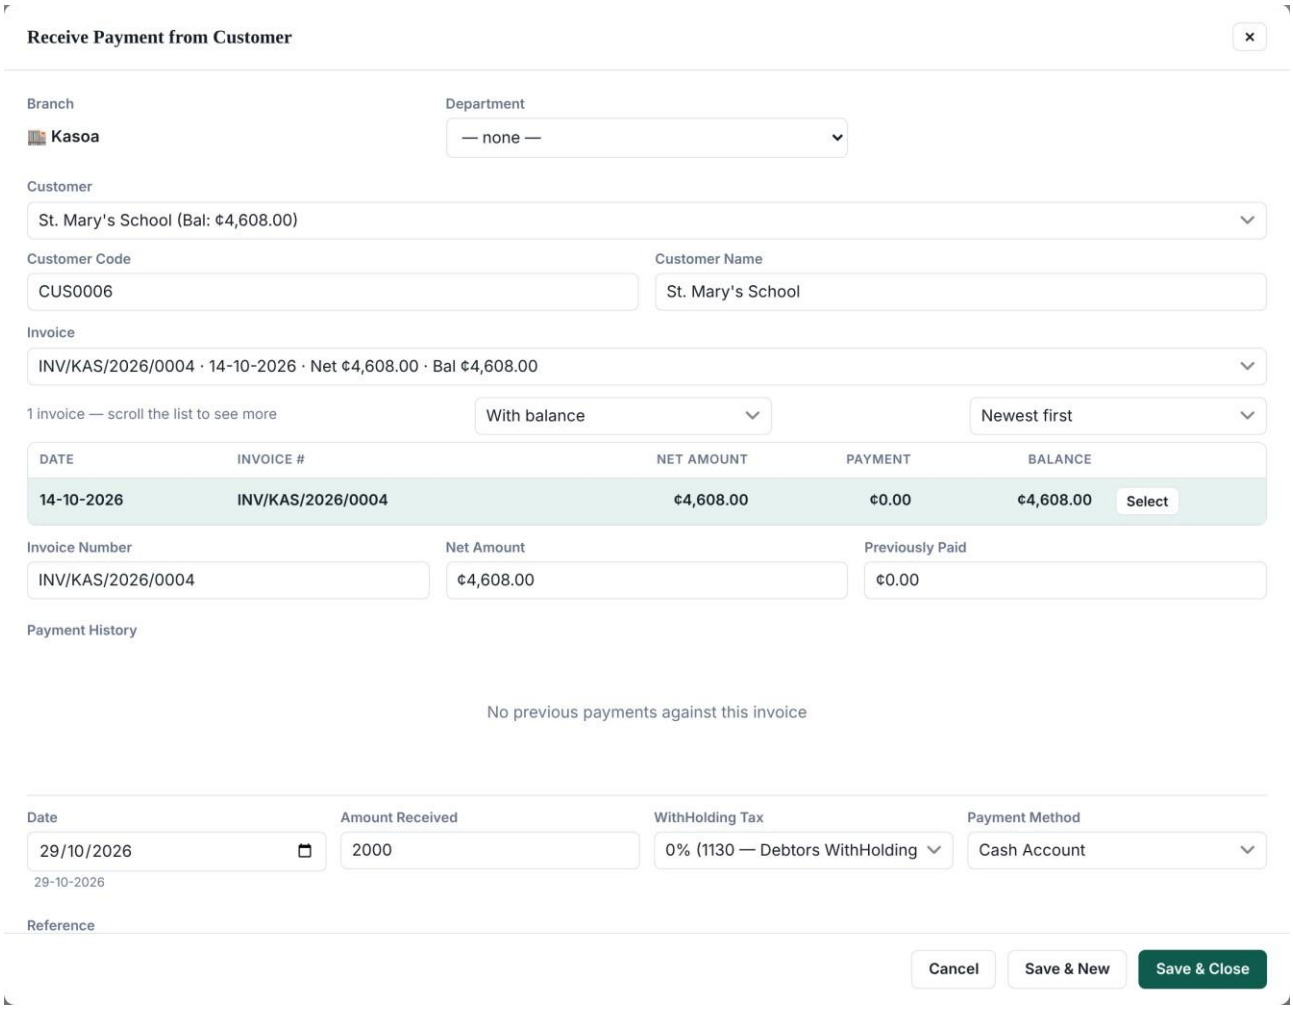

Statements for all customers

Use this screen every week. Customers more than 10 days late are put on hold automatically (section 5.1).

6.8 Receiving payment

Open **Sales > Receive Payment** and click **+ New Receipt**.

Receive Payment

1. Choose the **Customer**. Their balance shows in the list.
2. Choose the **Invoice** being paid. Its amount and balance appear. (You can also pick the invoice straight from the list of all unpaid invoices.)
3. Type the **Amount Received**: the part of the invoice this payment settles. Part payments are allowed; the invoice shows as part paid until it is cleared.
4. **WithHolding Tax:** if the customer deducts withholding tax from what they pay you, choose the rate (for example 3%, 5% or 7.5%). The tax is worked out on the amount before VAT and levies. The invoice is reduced by the full Amount Received; the cash or bank account receives that amount less the tax, and the tax goes to the matching Debtors WithHolding account, so you can claim it from GRA with the customer's certificate.
5. Choose the **Payment Method** (the account the money went into) and type a **Reference** (for example the cheque or Mobile Money transaction number) and **Narration**.
6. Click **Save & Close**.

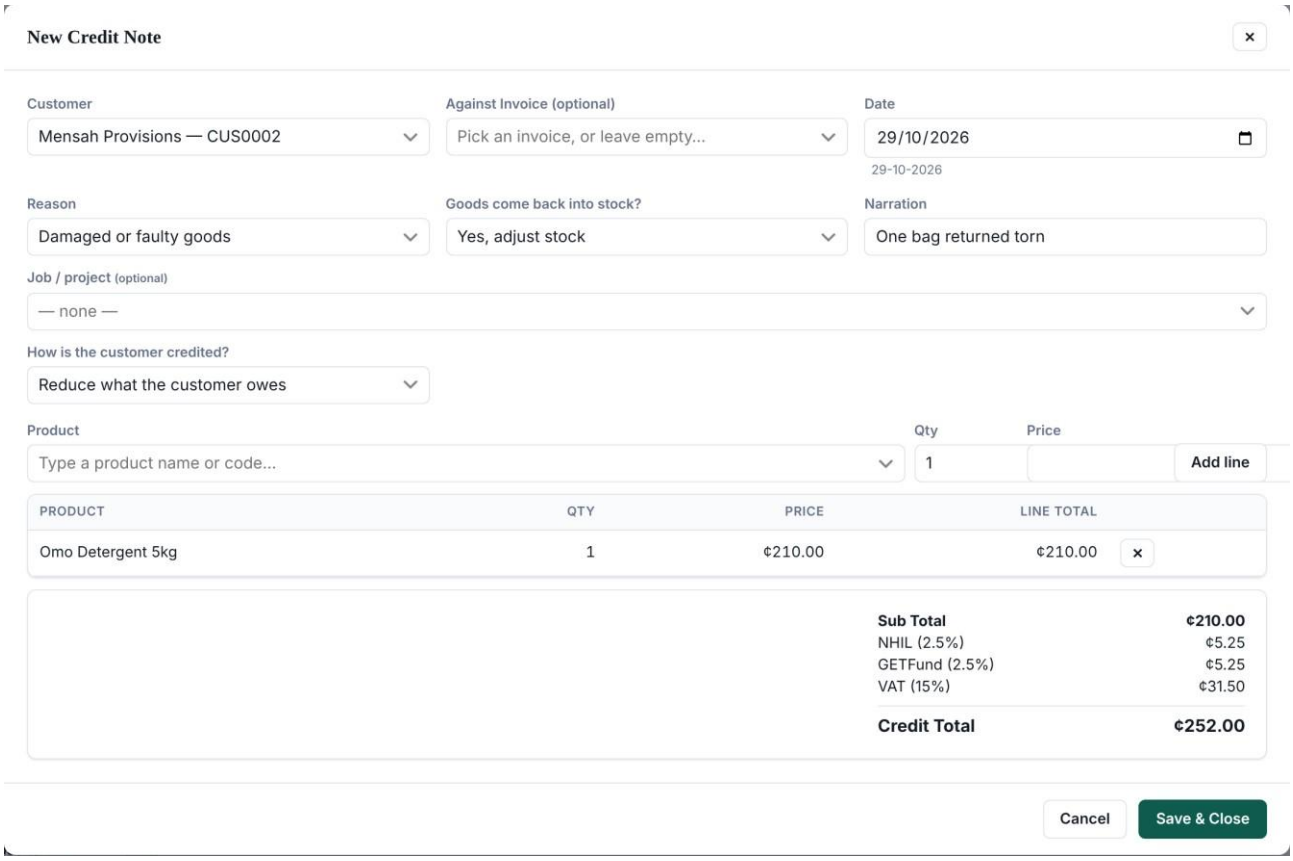

The receipt can be printed or shared from the list.

Paying more than is owed. If the Amount Received is more than the invoice balance, the program asks first, for example "This is ¢150.00, but only ¢100.00 is still owed on INV/2026/0001". Choose **Save anyway** (the extra becomes a credit on the customer's account) or **Go back** to correct the amount. This works online and offline; an offline receipt is asked about when it is typed, not again when it uploads.

6.9 Credit notes

When a customer returns goods, was overcharged, or is given a discount after the sale, raise a **credit note**. Never change a posted invoice to do this.

Open **Sales > Credit Notes** and click **+ New Credit Note**.

New Credit Note

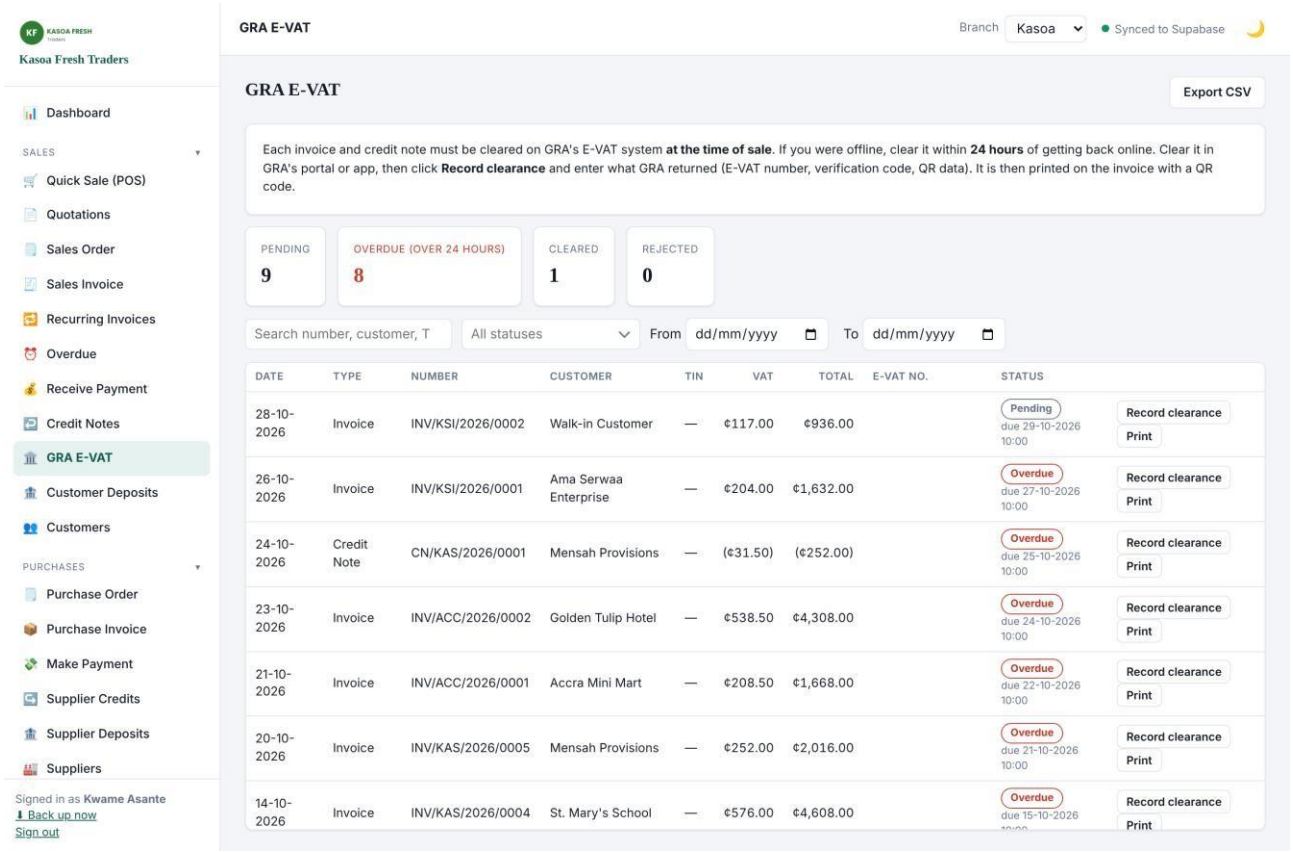

1. Choose the **Customer** and, usually, the invoice in **Against Invoice** (or "none" if the credit is not tied to one invoice). **Credit the whole invoice** copies every line of that invoice.
2. Choose the **Reason**: Goods returned, Damaged or faulty goods, Wrong item supplied, Overcharged / price correction, Discount given after the sale, or Other.
3. **Goods come back into stock? Yes, adjust stock** puts the items back in stock at their cost; **No, money only** does not.
4. **How is the customer credited? Reduce what the customer owes** (the credit comes off their balance) or **Refund the customer now** (choose the **Refund paid from** account).
5. Add or change the lines, add a narration and, if needed, the job.
6. Check the Credit Total (with NHIL, GETFund and VAT reversed) and click **Save & Close**.

Credit notes from suppliers work the same way under **Purchases > Supplier Credits** (section 7.4).

6.10 GRA E-VAT

Each invoice and credit note must be cleared on GRA's E-VAT system **at the time of sale**. If you were offline, clear it within **24 hours** of getting back online. The program does not send invoices to GRA itself: you clear them in GRA's portal or app and record the result here.

Open **Sales > GRA E-VAT**.

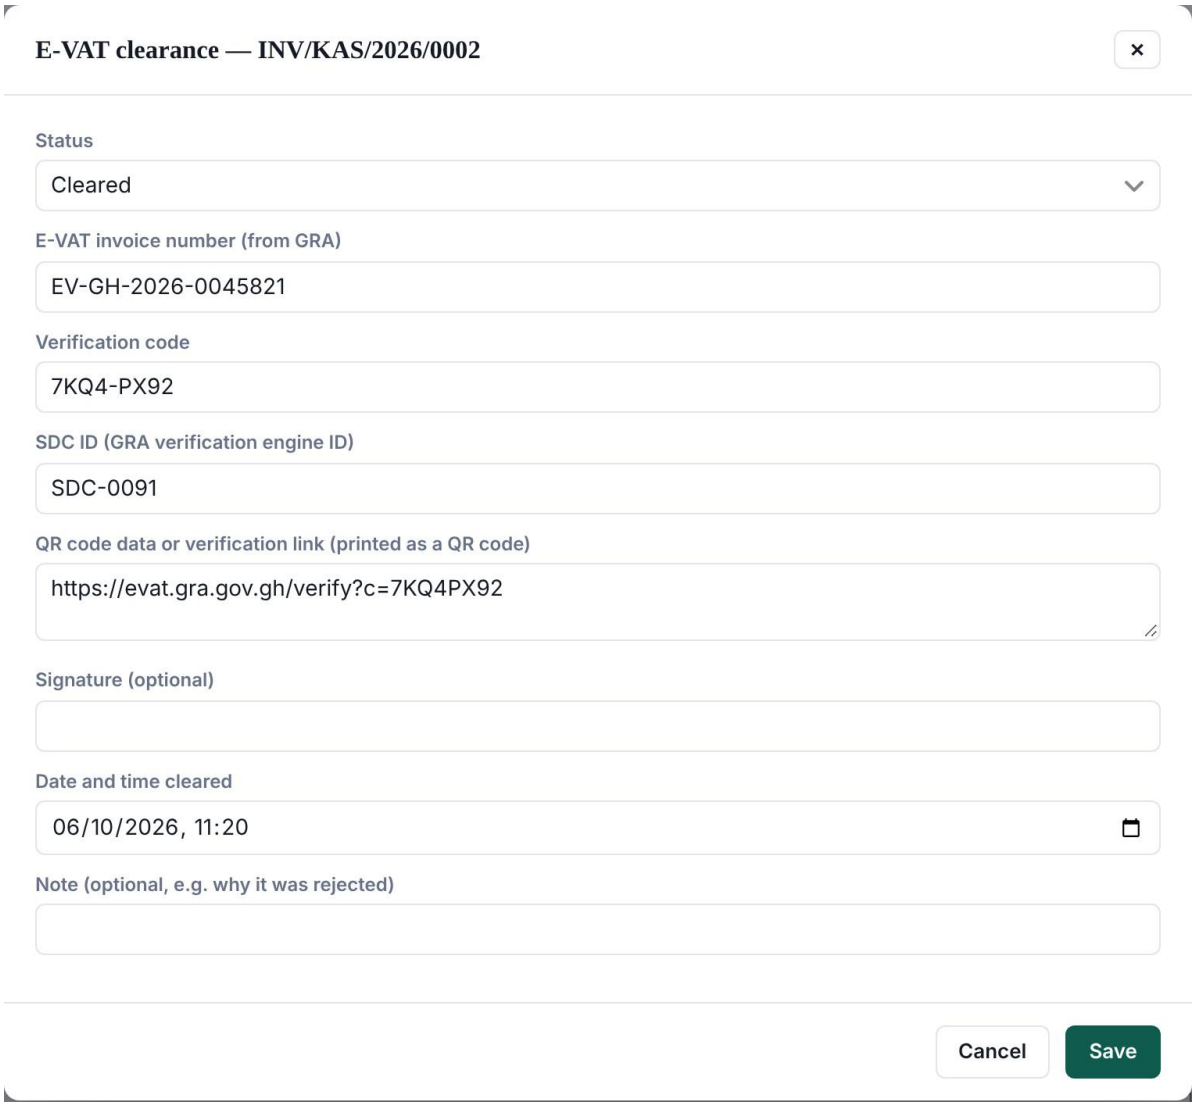

GRA E-VAT

The boxes at the top count invoices **Pending**, **Overdue (over 24 hours)**, **Cleared** and **Rejected**. The list shows each invoice and credit note with its date, number, customer, TIN, VAT, total, E-VAT number and status. An invoice not cleared within 24 hours of its time of supply shows **Overdue** in red with the time it was due.

Recording a clearance

1. Clear the invoice on GRA's system.
2. Click **Record clearance** beside it.
3. Choose the **Status** (Cleared, Rejected or Not applicable) and enter what GRA returned: **E-VAT invoice number**, **Verification code**, **SDC ID**, the **QR code data or verification link**, an optional **Signature**, the **Date and time cleared**, and a **Note** (for example why it was rejected).
4. Click **Save**.

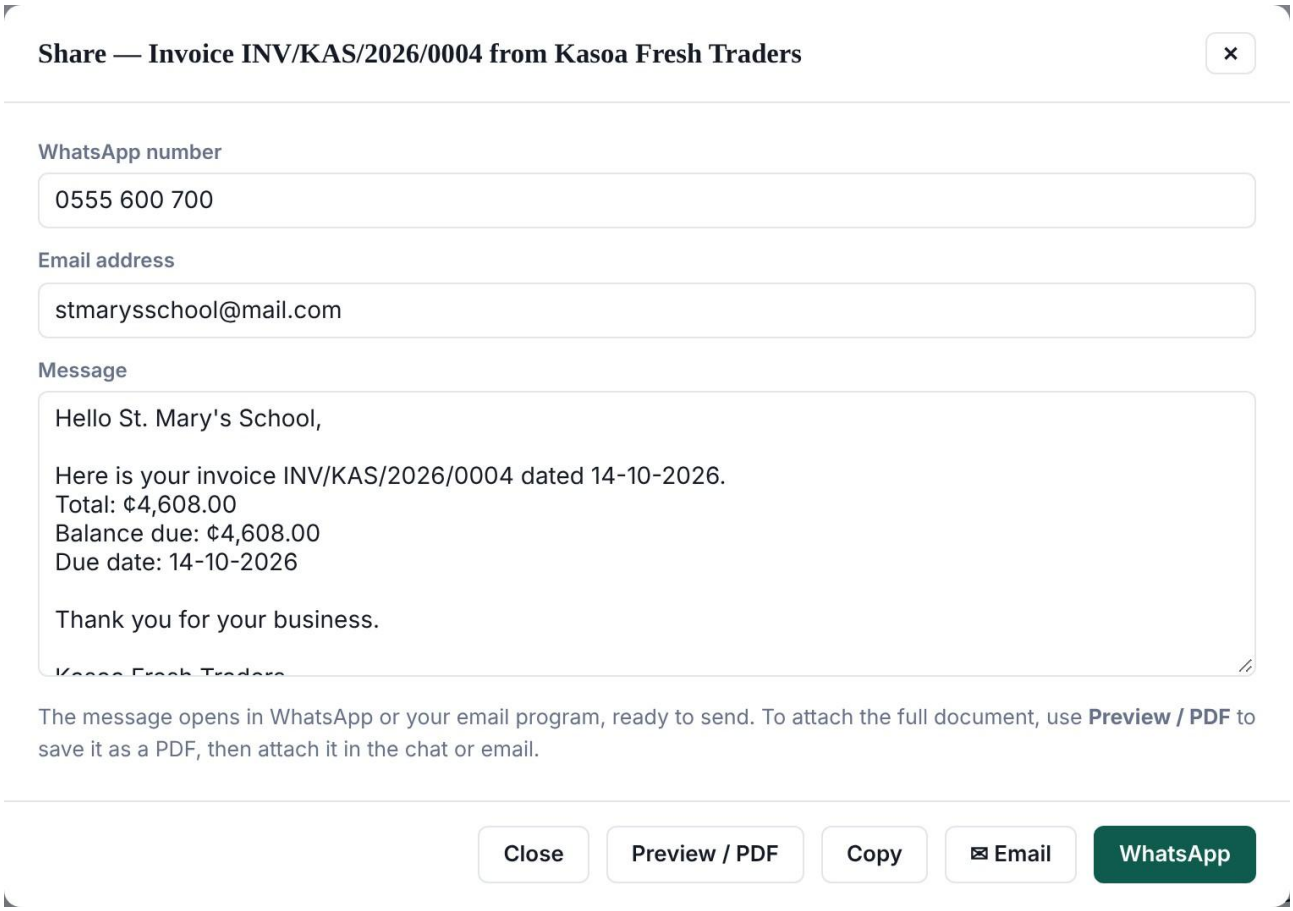

E-VAT clearance

The E-VAT number and a QR code then print on the invoice. **Export CSV** gives the list for your records. Voided invoices stay on this screen with the status **Voided** ("Number kept, invoice cancelled") and the reason.

6.11 Sharing documents

Share on an invoice, receipt, quotation, order, statement or reminder opens a window with the customer's **WhatsApp number**, **Email address** and a ready-written **Message** you can change. Click **WhatsApp** or ✉ **Email** to open it ready to send, or **Copy** to paste it anywhere. To send the document itself, click **Preview / PDF**, save it as a PDF and attach it in WhatsApp or your email.

7. Buying and expenses

Buying stock is in the **Purchases** group (Purchase Order, Purchase Invoice, Make Payment, Supplier Credits, Supplier Deposits, Suppliers). Running costs are in the **Expenses** group (Enter Expenses, Recurring Expenses, Pay Expense, Petty Cash & Cash-up).

As on sales forms, a company with branches sees the **Branch**, the **Stock location** (on purchases) and the **Business unit** (for lines whose account has none) at the top of each form, and the numbers carry the branch code (PUR/ACC/2026/0001).

7.1 Purchase orders

A **purchase order** tells a supplier what you want to buy. It posts nothing. Open **Purchases > Purchase Order**.

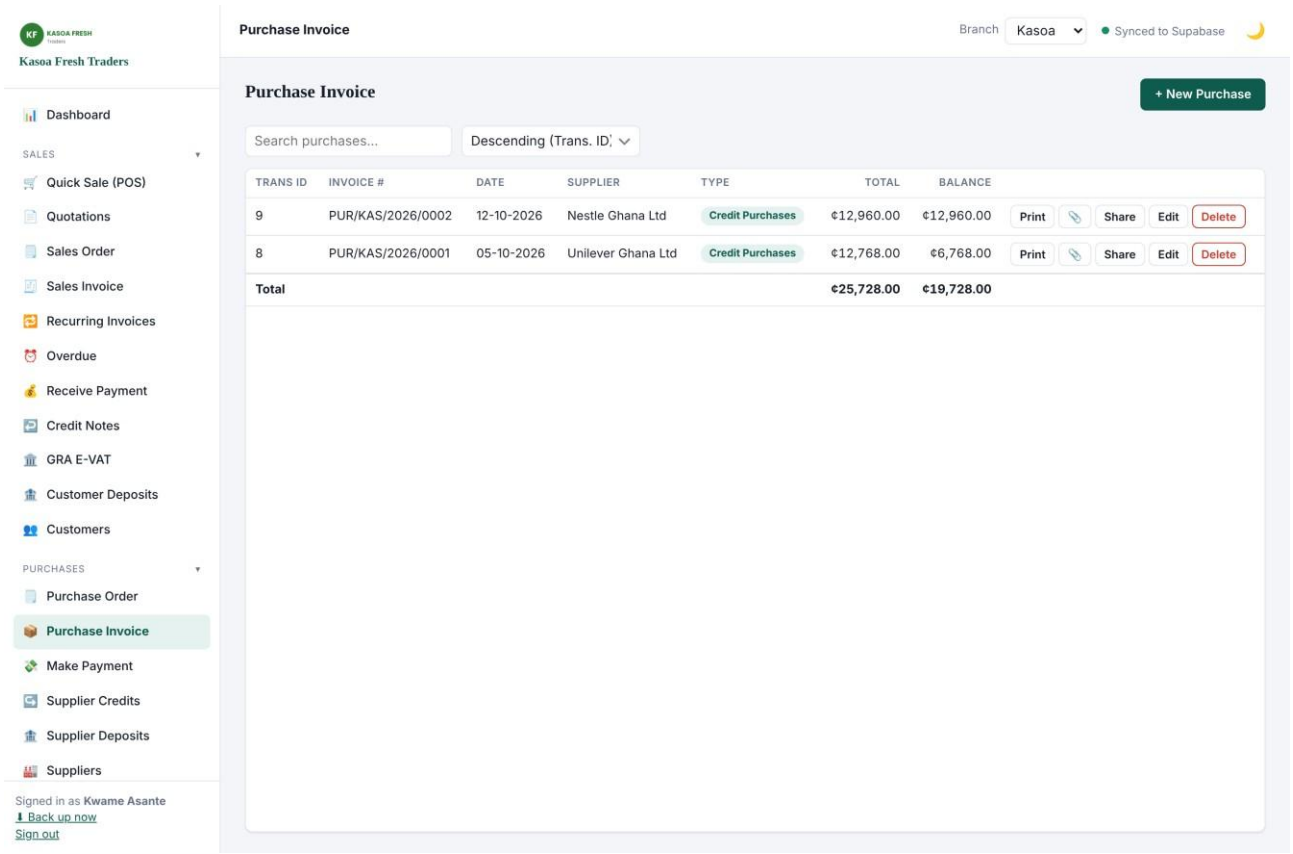

1. Click **+ New Order**.
2. Choose the **Supplier** (Inventory Suppliers only), the **Date** and the optional **Required By** date.
3. Add the lines: **Product**, **Qty**, **Unit Cost** and **Disc %**, then **Add line**.
4. Set the VAT tick box, add a narration and click **Save & Close**.

Reorder Out-of-Stock makes a purchase order in one click for every stock item that has run out and has a **Reorder Quantity** (section 5.3), at that quantity and the latest cost. Check it, choose the supplier and save.

When the goods arrive, click **Convert to Purchase** on the order. The purchase invoice opens with the lines still outstanding; anything you do not receive stays outstanding on the order.

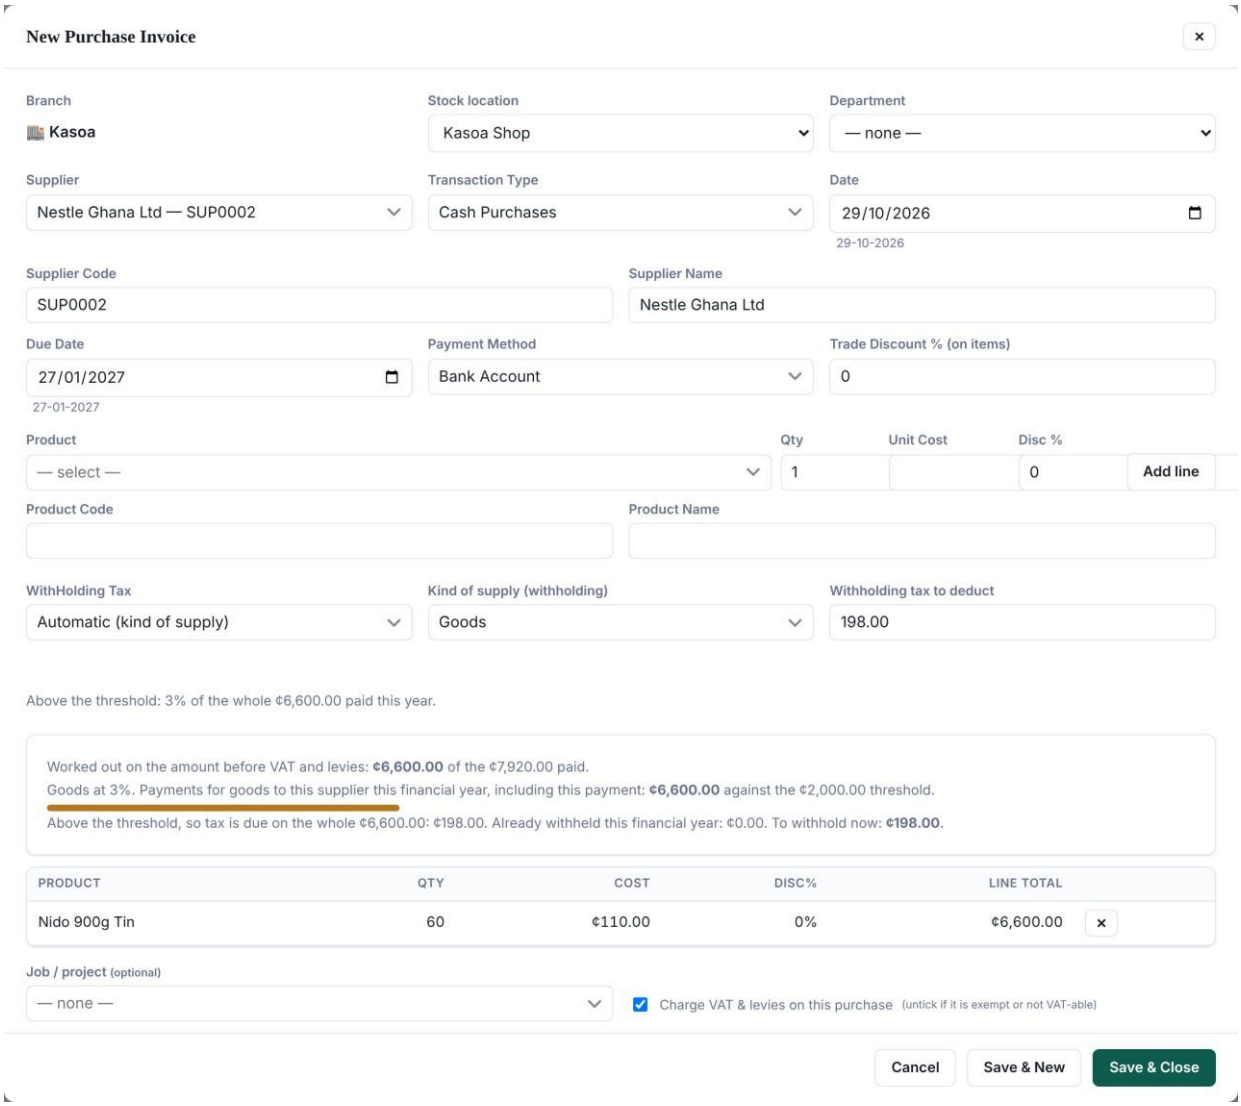

7.2 Purchase invoices

Open **Purchases > Purchase Invoice**.

The purchase invoice list

1. Click **+ New Purchase**.
2. Choose the **Supplier** and the **Transaction Type**: **Credit Purchases** (you will pay later) or **Cash Purchases** (paid now; choose the **Payment Method**).
3. Check the **Date** and **Due Date**.
4. With branches, check the **Stock location** the goods go into.
5. Add the lines: **Product**, **Qty**, **Unit Cost**, **Disc %**, then **Add line**.
6. Optional: **Trade Discount %**, **Cash Discount (amount)**, **Job / project**, and the VAT tick box (untick for a supplier who does not charge VAT).
7. Type the supplier's own invoice number in the **Narration** (the purchase form has no separate box for it), for example "Unilever invoice 88213".
8. Click **Save & Close**.

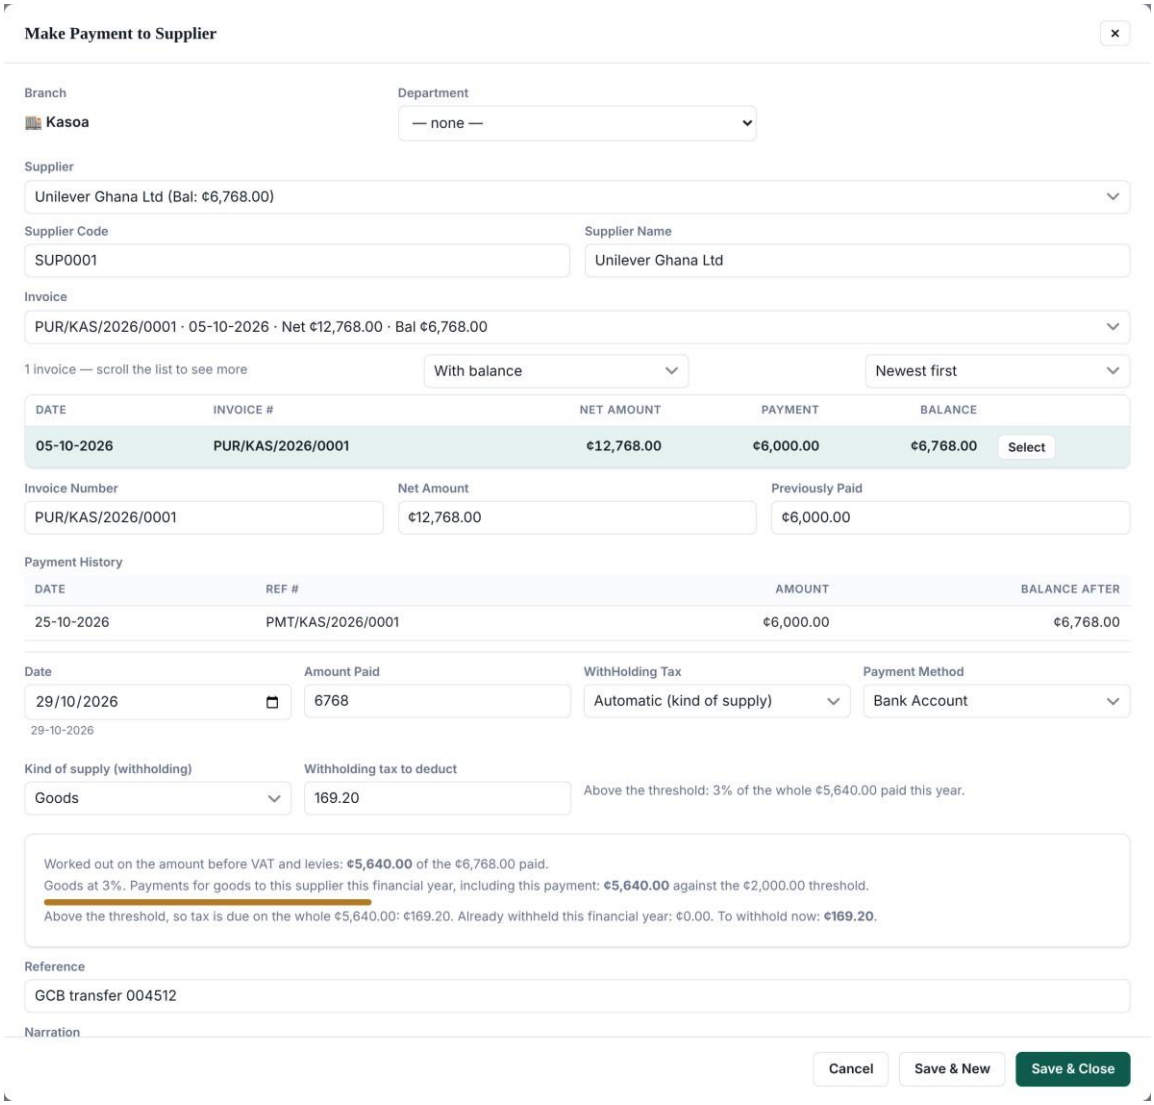

New Purchase Invoice

What saving does. Inventory is debited with the cost before tax, Input VAT, NHIL and GETFund with the taxes you can claim, and Creditors (for a credit purchase) or the payment account (for a cash purchase) is credited. Stock goes up as a new FIFO layer at this cost, and the product's Latest Cost is updated.

For a **cash purchase**, the withholding tax box appears on the form, because you are paying the supplier now (section 7.8).

7.3 Paying suppliers

Open **Purchases > Make Payment** and click **+ New Payment**.

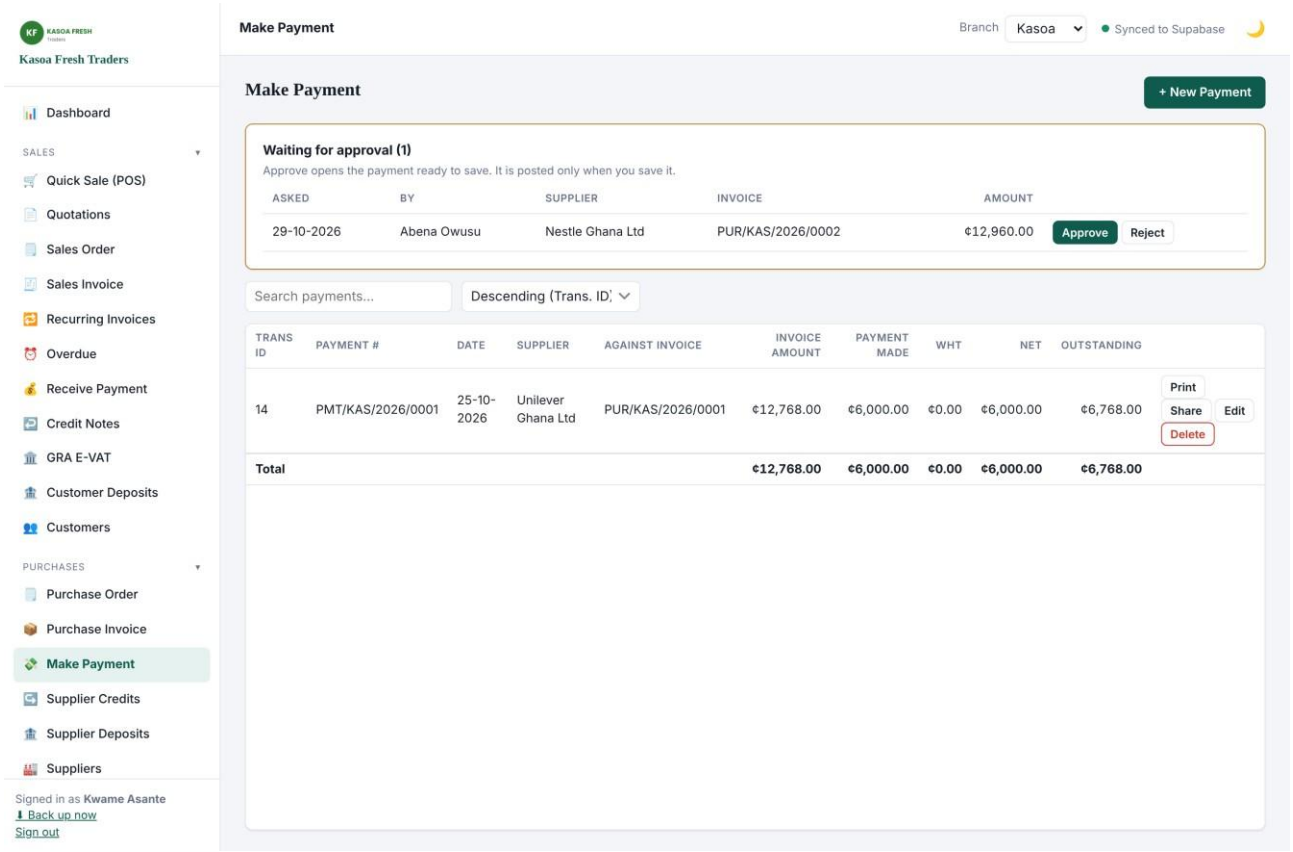

Make Payment

1. Choose the **Supplier** (their balance shows) and the **Invoice** being paid.
2. Type the **Amount Paid**.
3. Check the withholding tax: **WithHolding Tax** is on **Automatic (kind of supply)** to start with and the **Kind of supply** comes from the supplier. The box below shows the tax to deduct and why (section 7.8).
4. Choose the **Payment Method**, and type a **Reference** (cheque or transfer number) and **Narration**.
5. Click **Save & Close**.

The invoice list shows invoices with a balance first. Use the filter to show fully paid invoices or all of them.

If the amount is more than is still owed on the invoice, the program asks first: **Save anyway** (the extra becomes a credit with the supplier) or **Go back**. The same question is asked on Pay Expense.

Payment approval. If an approval amount is set (section 3.3), a payment at or above it, made by someone without Full rights on Make Payment, is not posted. It is sent for approval and listed in a **Waiting for approval** box above the list. A user with Full rights clicks **Approve**, which opens the payment ready to save; it is posted only when they save it. **Reject** cancels the request, and the person who asked can **Withdraw** it. The same applies to Pay Expense.

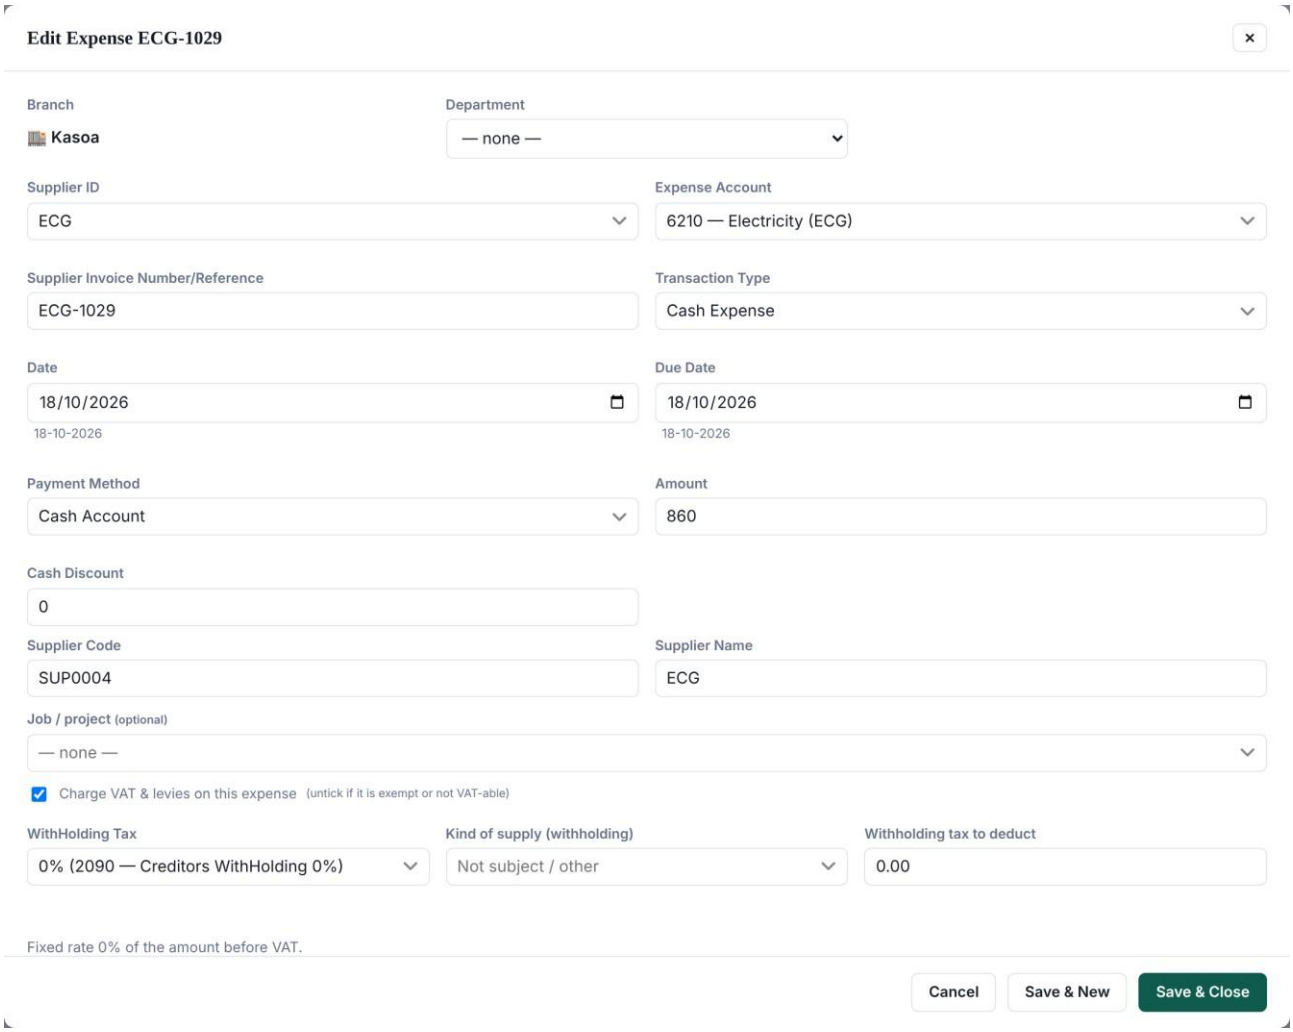

A payment waiting for approval

7.4 Supplier credits

Use **Purchases > Supplier Credits** when you return goods to a supplier, or the supplier gives you a discount or correction after invoicing. Click **+ New Supplier Credit Note**. The form is the same as a customer credit note (section 6.9): choose the supplier and invoice, the reason, **Goods go back to the supplier?** (Yes takes them out of stock), the lines, and how you are credited: **Reduce what I owe the supplier** or **Supplier refunds me now** (choose the account the refund is paid into).

7.5 Expenses

Use **Expenses > Enter Expenses** for costs that are not stock: rent, ECG, water, fuel, repairs, airtime, professional fees and so on.

Enter Expense

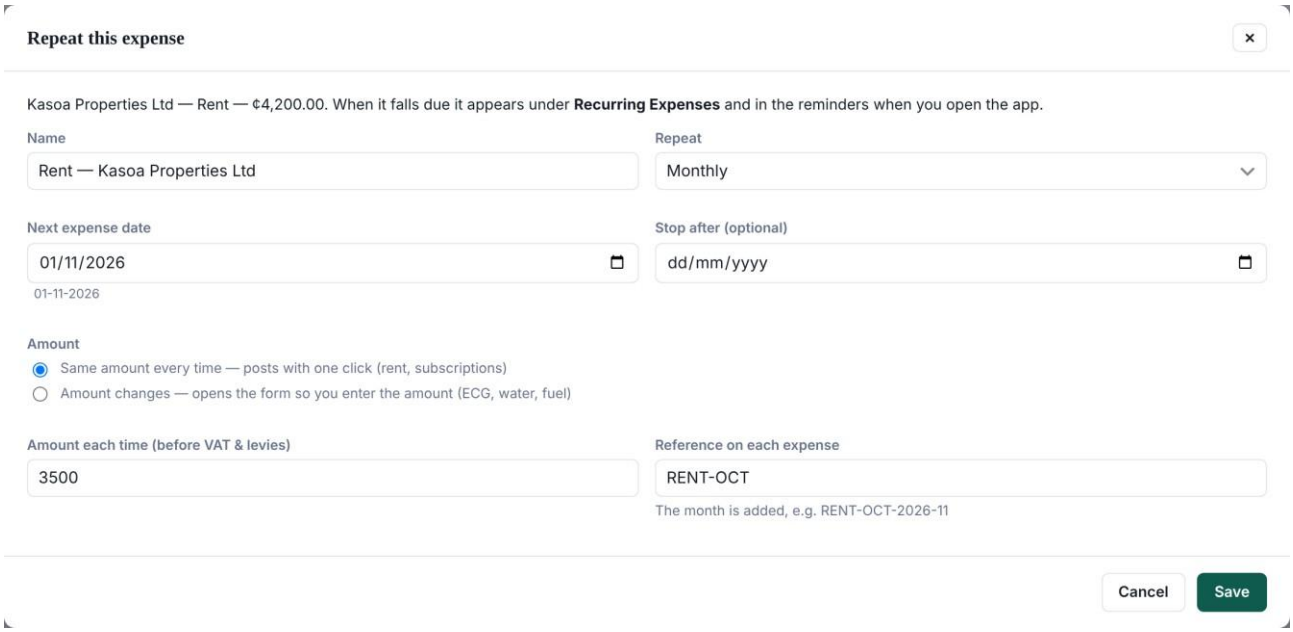

1. Click **+ New Expense**.
2. Choose the **Supplier ID** (Expenses Suppliers only) and the **Expense Account**, for example 6210 Electricity (ECG).
3. Type the **Supplier Invoice Number/Reference**, for example ECG-1029.
4. Choose the **Transaction Type**: **Credit Expense** (you will pay later with Pay Expense) or **Cash Expense** (paid now; choose the payment method; the withholding tax box appears).
5. Check the **Date** and **Due Date**, type the **Amount** before VAT, any **Cash Discount**, the job if any, and the VAT tick box.
6. Click **Save & Close**.

Each expense in the list has **Print**, 📎 (attach the supplier's bill or a photo of the receipt), ↻ **Repeat**, **Edit** and **Delete**.

Recurring expenses. Click ↻ **Repeat** on an expense to repeat it: give it a **Name**, choose how often (**Weekly** to **Yearly**), the **Next expense date** and **Stop after** if it ends. Then choose:

> **Same amount every time:** posts with one click (rent, subscriptions). Type the **Amount each time (before VAT & levies)**.
>
> **Amount changes:** opens the form so you type the amount (ECG, water, fuel).

The **Reference on each expense** gets the month added, for example RENT-OCT-2026-11. Due expenses are listed in **Expenses > Recurring Expenses** and in the reminders when you open the program, with **Post now** or **Enter amount**.

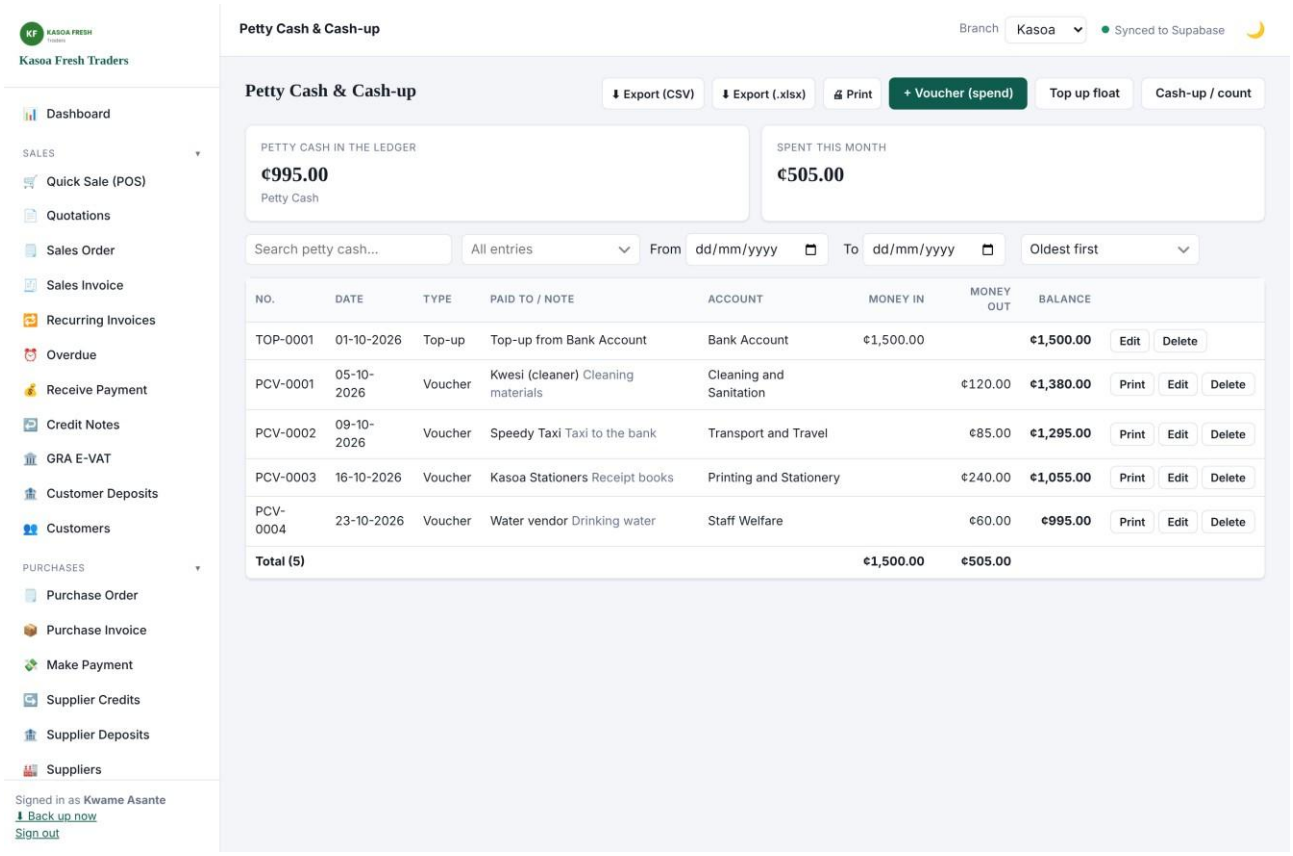

Repeat this expense

Pay Expense. A credit expense is paid in **Expenses > Pay Expense** (the form is called **Pay Accrued Expense**). Choose the supplier and the **Expense Invoice**, the **Amount Paid**, the withholding tax and the payment method, and save. It works like Make Payment, including approval. A fixed asset bought on credit (section 9.4) is paid here too: it is saved as that supplier's expense invoice.

7.6 Petty cash

Expenses > Petty Cash & Cash-up keeps the petty cash book: money in, money out and a running balance.

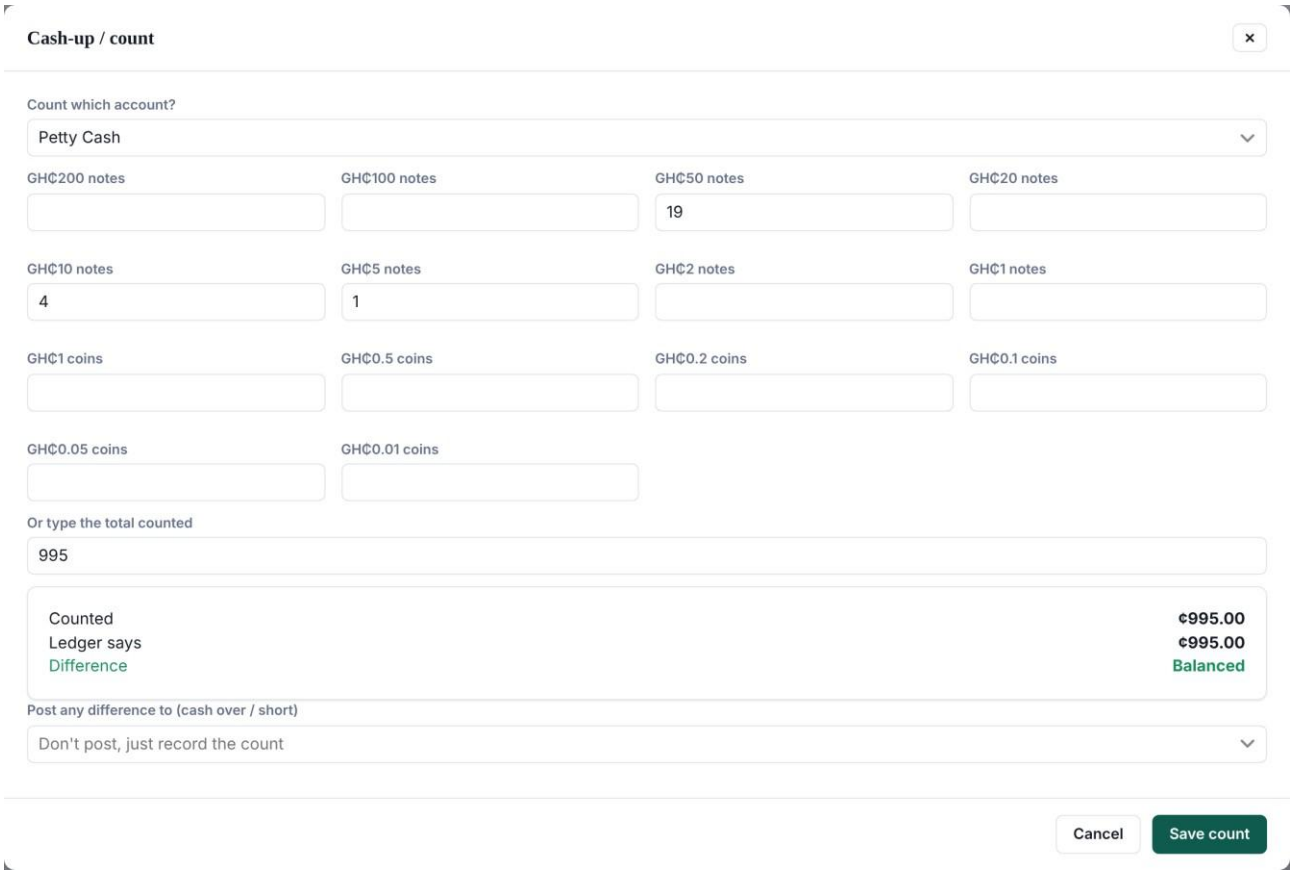

Petty cash book

First time. Choose the account that holds your petty cash and click **Use this account**, or click **Create "Petty Cash" account**.

Top up float: money put into the petty cash box. Enter the **Date**, **Amount** and the account it was **Taken from**, and click **Save top-up**.

+ Voucher (spend): money paid out of the box. Enter the **Date**, **Amount**, **Paid to**, the **Expense account** and **What it was for**, and save. The voucher can be printed for the person to sign. **Save & New** lets you enter several in a row.

Cash-up / count: count the cash. Choose the account to count (petty cash or any cash account, for example the shop till), type how many of each note and coin you have (or just the total), and the window shows **Counted**, **Ledger says** and the **Difference** (short or over). Choose whether to post the difference to an account (for example Cash Over/Short) or just record the count, and click **Save count**.

Cash-up

The panel at the top shows the petty cash in the ledger and what was spent this month. Filter the list by type (vouchers, top-ups, cash-ups) and dates. Click **Edit** on a voucher or top-up to correct it; its entries are posted again. A cash-up count cannot be edited, but an administrator can delete it.

7.7 Supplier deposits

Use **Purchases > Supplier Deposits** when you pay a supplier in advance. Click **+ Pay deposit**, choose the **Supplier**, **Date**, **Amount**, the account it was **Paid from** and a note, and save. This posts Dr **Supplier Deposits** (an asset: the supplier owes you the goods), Cr the account paid from. When the supplier's invoice arrives, use **Apply to invoice**. If the supplier gives the money back, use **Refund**.

7.8 Withholding tax on supplier payments

Make Payment and Pay Expense, and cash purchases and cash expenses, work out Ghana withholding tax for you. The rules are kept on the supplier and in Admin, and every figure can be checked on the payment screen.

Set up once. On each supplier (section 5.2) choose **Resident** or **Non-resident**, and what they supply: **Goods** (3%), **Works** (5%), **Services** (7.5%) or **Not subject**. In **Accounts Settings and Defaults > Withholding tax rules** (section 3.4) check the yearly threshold (¢2,000), the three rates, the non-resident rate (20%), and whether the threshold is tested separately for goods, works and services or on all supplies together.

How it is worked out

Tax is worked out on the amount **before VAT and levies**, not on the amount paid.

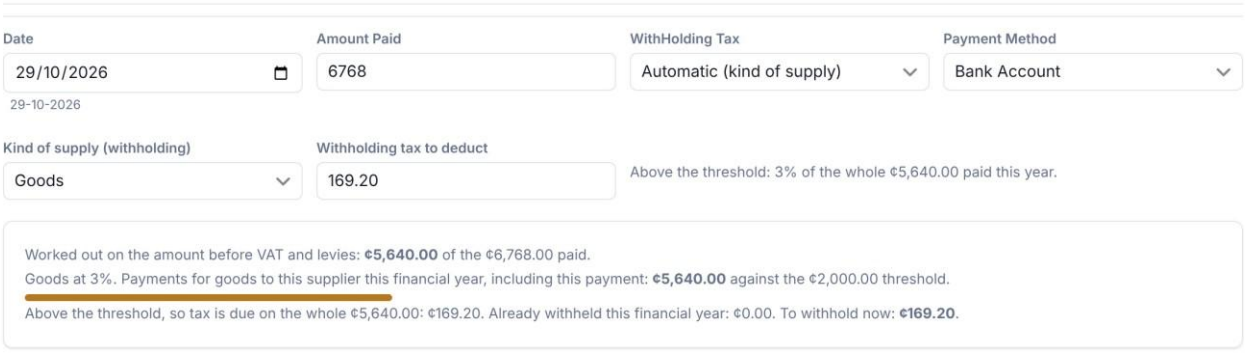

For a resident supplier nothing is withheld until the payments for the same kind of supply, in the financial year, go above the threshold. A total of ¢2,000 or less is exempt.

The payment that takes the total above the threshold is taxed on the **whole year-to-date amount**. Later payments are taxed at the flat rate. What was already withheld is taken off, so the figures always add up.

A non-resident supplier is taxed at the non-resident rate from the first cedi.

The financial year is the Accounting Period in General Settings (January to December if it is not set). The totals start again each year.

Example (services, 7.5%). Three payments to the same supplier, before VAT: ¢1,000, then ¢900, then ¢900. The first two are below ¢2,000, so nothing is withheld. The third brings the total to ¢2,800, so the tax is 7.5% of ¢2,800 = ¢210, taken from that payment. A fourth payment of ¢500 is taxed at 7.5% = ¢37.50.

Withholding tax worked out on Make Payment

On the payment screen. The kind of supply and the tax to deduct sit beside the amount paid, with a one-line explanation. The box below shows the year-to-date total against the threshold, the tax due and what was already withheld. Instead of Automatic you can pick a fixed rate in the WithHolding Tax list, for example 8% for residential rent, 10% for commission, or 15% for commercial rent or royalties. A fixed rate is also worked out on the amount before VAT.

When the tax is more than the payment. If a small payment pushes the total over the threshold, the tax due can be more than the payment itself. The program deducts only what the payment can cover, shows a warning, and keeps the rest as still to be withheld; it is suggested again on the next payment to that supplier. This is the program's own careful rule, because the tax rules do not say what to do in this case. Ask GRA or your tax adviser if you need a different treatment.

Changing the amount. You may type a different tax amount, for example when you settle a shortfall another way. The program then asks for a reason, which is saved with the payment and shows in the Audit Log.

Tracking. The **WHT Threshold Tracker** report lists each supplier's payments against the threshold. The **WHT Register** shows the base and the tax for every payment, and a **Certificate** can be printed for each one (section 10.5). Tax withheld from suppliers is due to GRA by the 15th of the following month.

Credit purchases and credit expenses are taxed when you pay them. The rules follow the GRA Practice Note on Withholding of Tax. Rates and the threshold change with the law, so check them with GRA.

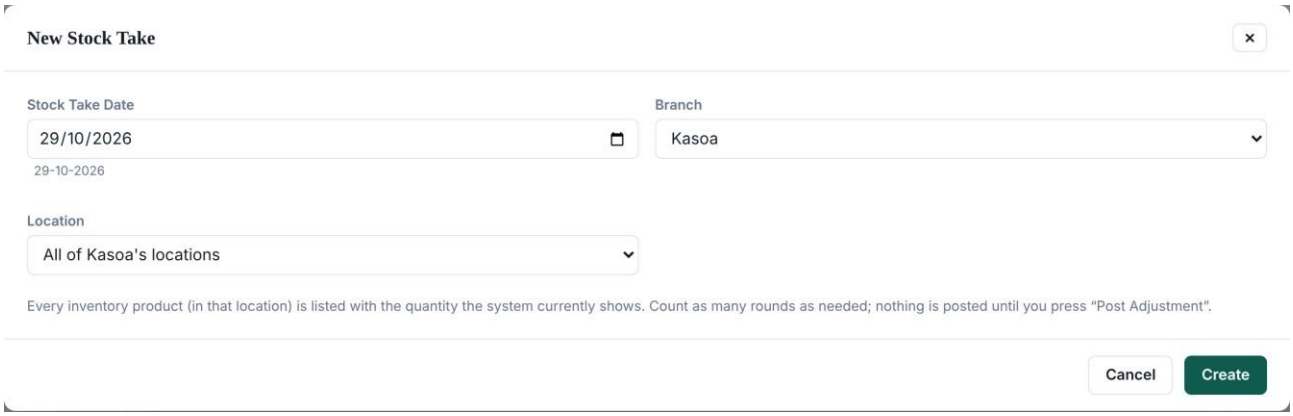

8. Stock

Stock goes up with purchases, credit notes for returned goods and stock gains, and goes down with sales, supplier returns and write-offs. It is valued **first in, first out** (section 5.3). The screens are in the **Products** group: Product Information, Stock Take and Stock Transfers.

8.1 Stock take

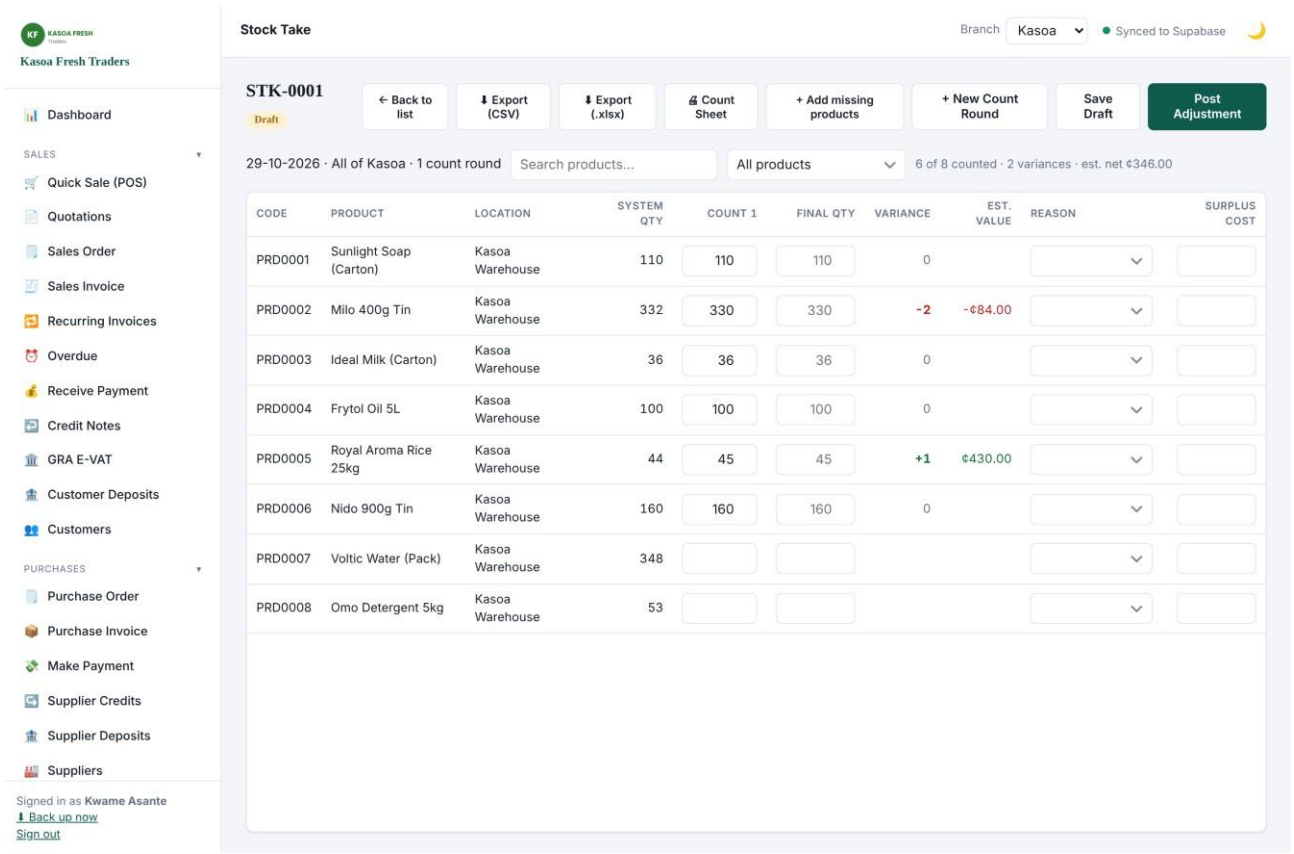

A stock take compares what is on the shelves with what the program shows, and corrects the difference in one step.

Open **Products > Stock Take** and click **+ New Stock Take**.

New Stock Take

1. Check the **Stock Take Date**.
2. With branches, choose the **Branch** (or **Whole company**, which only someone who sees all branches can choose) and the **Location**: one location, or all of the branch's locations.
3. Click **Create**. Every stock product in that location is listed with the quantity the system shows.
4. Click **Count Sheet** to print a sheet for the counters. Leave **Show system quantities** unticked for a blind count, so counters write down what they see. You can print all products or only those with a variance (the recount list).
5. Type the counted quantities in **Count 1**. If some counts look wrong, click **+ New Count Round** and count again: every round is kept side by side. The agreed quantity is the **Final Qty** if you type one, otherwise the latest round with a count. Each line shows the **Variance** and its estimated value, and you can choose a reason for it.
6. Use the filter to see **Not counted yet**, **With a variance (recount list)** or **Counts disagree between rounds**. **+ Add missing products** adds stock items that were not on the sheet.
7. Click **Post Adjustment** when the counts are agreed. A summary shows the shortages and surpluses with their estimated value and the products not counted (left unchanged). Confirm.

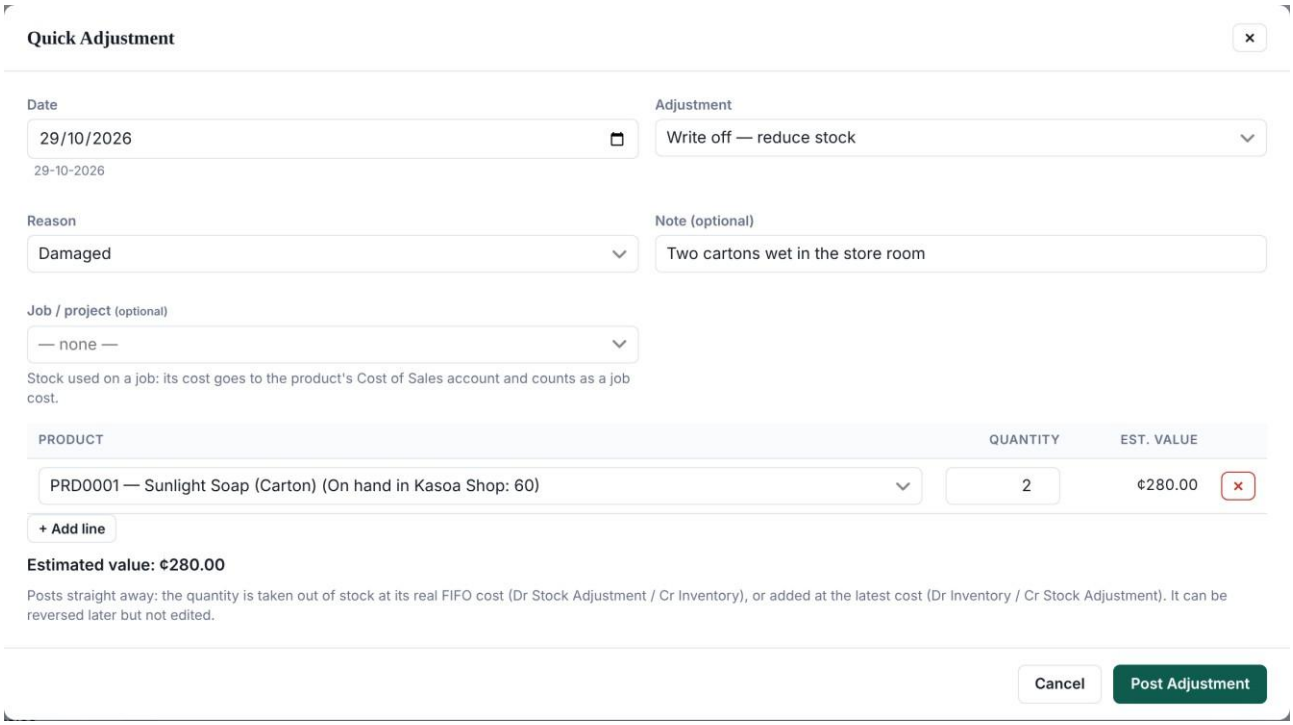

A stock take sheet

Nothing is posted until you press Post Adjustment, so you can save the sheet and continue later. A shortage is taken out of stock at its real FIFO cost (Dr Stock Adjustment, Cr Inventory); a surplus is added at the product's latest cost unless you type another (Dr Inventory, Cr Stock Adjustment). If sales or purchases happened while you were counting, the adjustment is worked out against the quantity the system shows when you post, and the summary warns you.

A posted stock take cannot be edited or deleted. **Reverse** posts the exact opposite adjustment, so the record stays clean. A draft that has not been posted can be deleted. **Adjustment** prints the posted adjustment for signing.

8.2 Quick Adjustment

For one or a few products (damaged, expired or stolen goods, or goods found), use **+ Quick Adjustment** on the Stock Take screen.

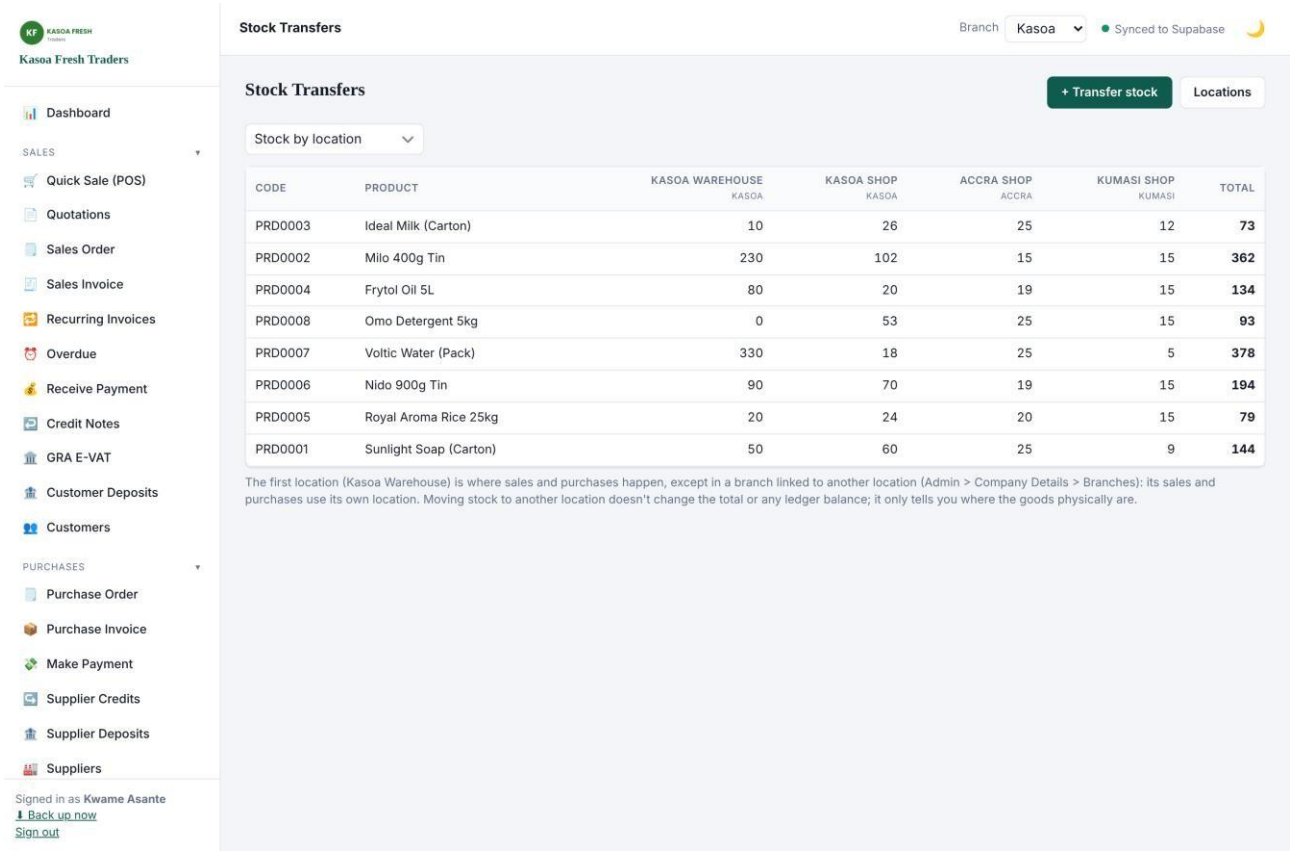

Quick Adjustment

1. Choose **Write off — reduce stock** or **Increase stock**.
2. Choose the **Reason** from your list (section 3.4): for a write-off Count correction, Damaged, Expired, Lost / Missing, Theft or Other; for an increase Count correction, Found / Unrecorded or Other.
3. Add a **Note** if you like, and for a write-off of stock used on a job, the **Job / project** (its cost then counts as a job cost).
4. Add the products and quantities. The estimated value shows below.
5. Click **Post Adjustment**.

It posts straight away. It can be reversed later but not edited. In a company with branches, the adjustment is made in your branch's selling location.

8.3 Stock transfers and stock by location

Open **Products > Stock Transfers**.

Stock by location

Stock by location shows each product's quantity in every location, with the branch under each location name, and the total. **Transfer history** lists every move.

To move stock:

1. Click **+ Transfer stock**.
2. Choose the **Date**, **Product**, **From** and **To** locations, and type the **Quantity** and a **Note**.
3. Click **Move**.

A transfer changes where stock is, not its total or value, so it posts nothing to the ledger. You cannot move more than the From location holds. With branches, you can only move stock out of your own branch's locations (or shared ones), unless you see all branches.

The **Locations** button opens Admin / Settings > Company Information > Branches and business units, the only place where locations are added, renamed and linked to a branch (section 3.2).

8.4 Stock reports and checks

Stock / Product Summary (Reports): quantity, reorder, minimum and maximum quantities, cost, value and status for each product. With branches, choose a branch to see that branch's stock.

Product Movement (Reports, or Movement on the product): every movement of one product with the balance after each.

Stock check (Product Information): compares the stock value with the inventory accounts in the ledger (section 5.3). Run it before you close each month.

9. Journals, ledger, bank, fixed assets, budgets, month-end and jobs

These screens are in the **General** group of the menu: Jobs / Projects, Month-end Checklist, Management Pack, Chart of Accounts, Journal Entry, Ledgers, Bank Reconciliation, Fixed Assets and Budget vs Actual.

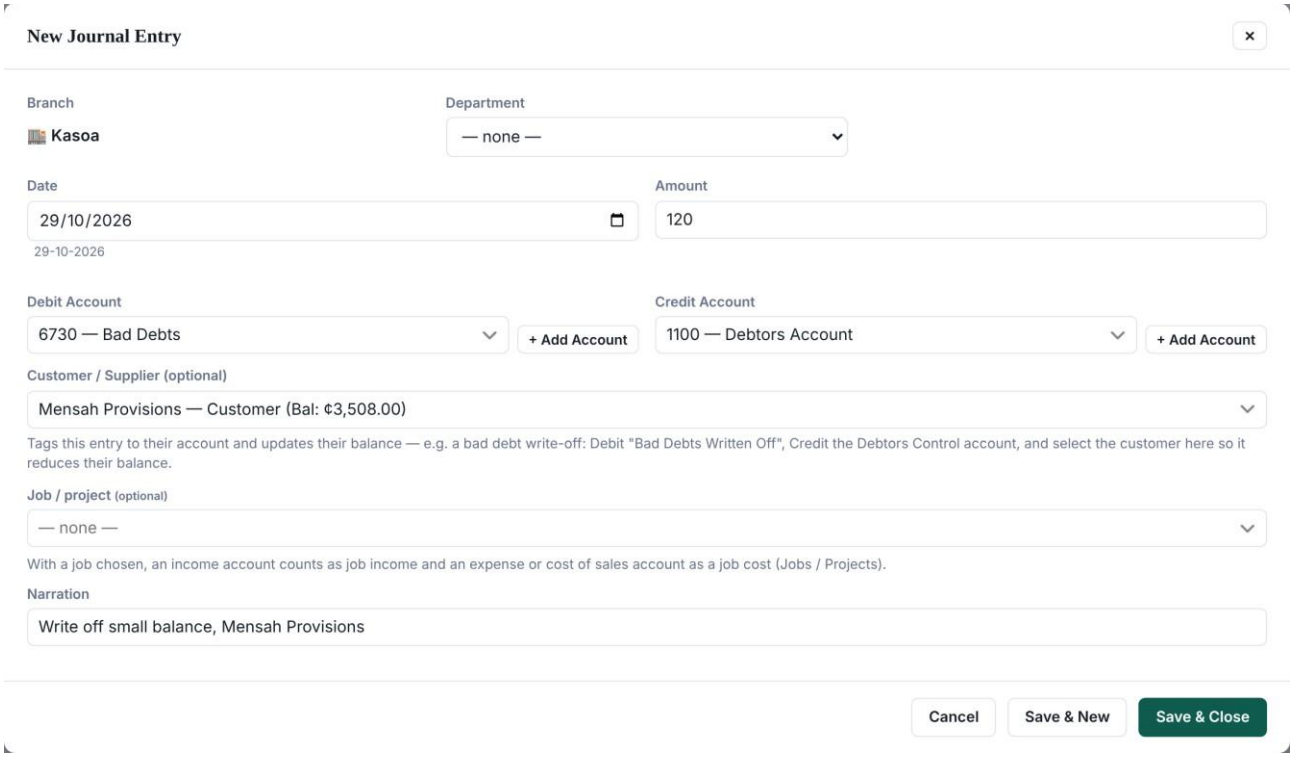

9.1 Journals

A journal moves value between accounts directly. Use it for things no other form records: capital brought in by the owner, assets bought, loans, corrections, write-offs, accruals and year-end adjustments.

Open **General > Journal Entry**. The screen has two lists, **Single Entries** and **Multi-line Entries**. **A**

single journal (one debit, one credit)

1. Click **+ Journal Entry**.
2. Choose the **Date** and type the **Amount**.
3. Choose the **Debit Account** and the **Credit Account**. If the account you need does not exist, click **+ Add Account** beside the box to make it without leaving the form.
4. **Customer / Supplier (optional):** choose one when a line touches Debtors or Creditors, so their balance changes too. For example, to write off a bad debt: Debit Bad Debts, Credit Debtors Account, and choose the customer.
5. **Job / project (optional):** an income account then counts as job income, and an expense or cost of sales account as a job cost.
6. Type a **Narration** and click **Save & Close**.

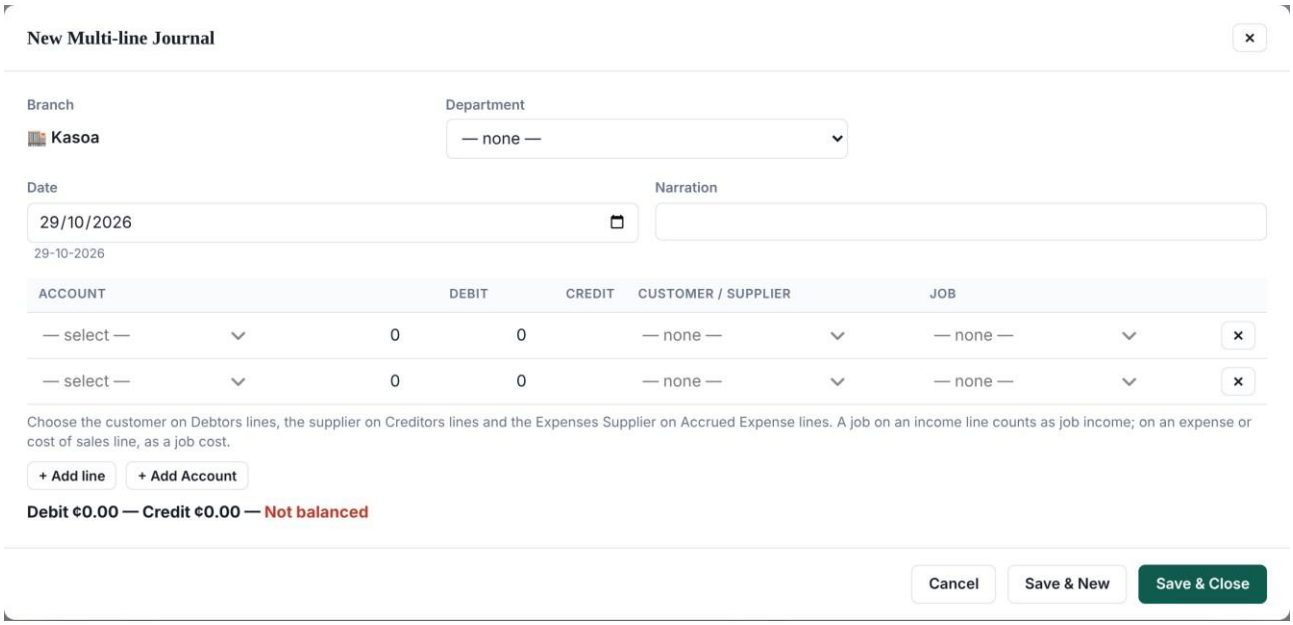

New Journal Entry

A multi-line journal

1. Click **+ Multi-line Journal**.

2. Enter the **Date** and **Narration**.
3. On each line choose the **Account** and type the **Debit** or the **Credit**. Choose the customer on Debtors lines, the supplier on Creditors lines and the Expenses Supplier on Accrued Expense lines, and a job where it applies. **+ Add line** adds more lines.
4. The bottom shows the total debit and credit and **Not balanced** until they agree. Click **Save & Close**.

New Multi-line Journal

With branches, a journal is tagged with the branch and business unit chosen at the top (a line whose account has its own business unit goes there). Journals can be printed, have files attached (📎), edited and, with Full rights, deleted.

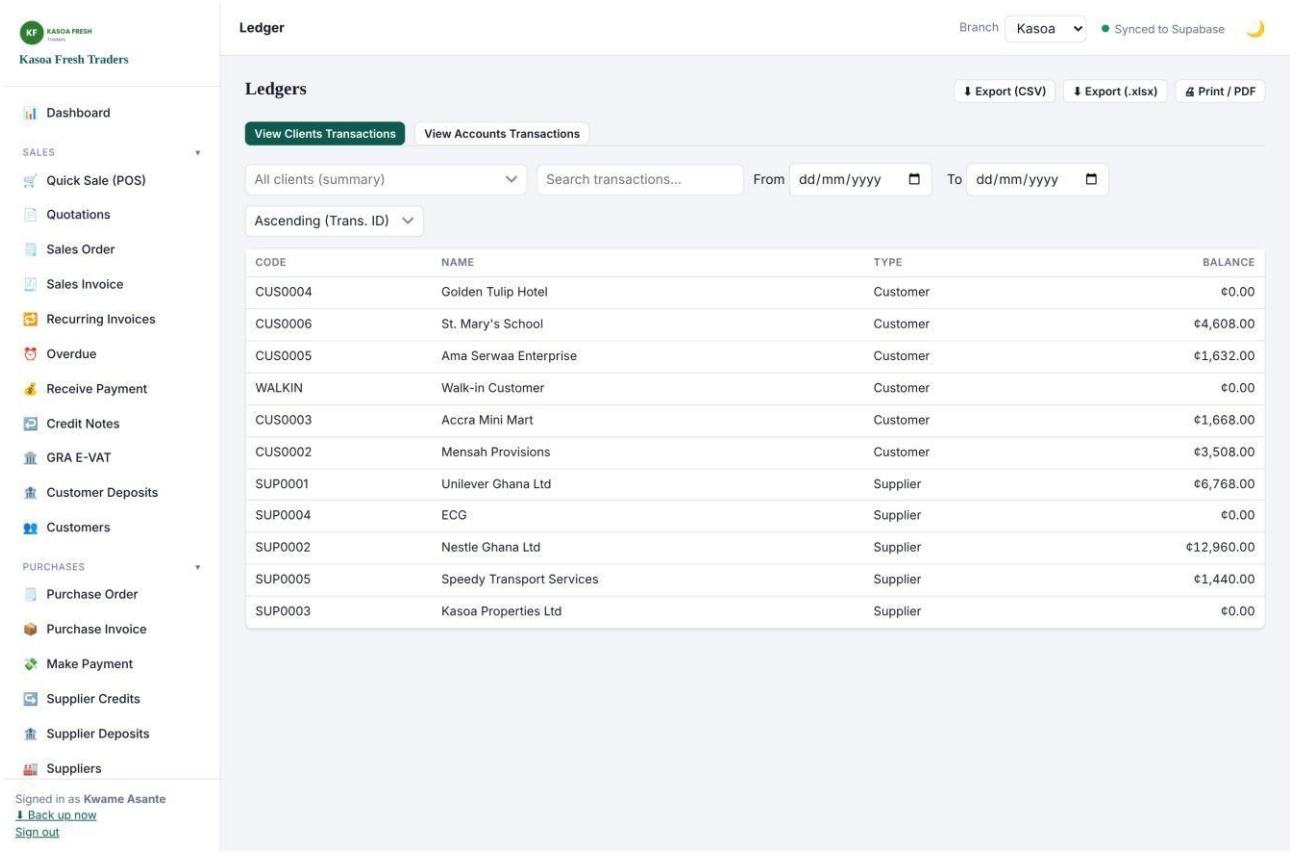

9.2 The ledger

Open **General > Ledgers**. It has two views:

View Clients Transactions: every customer and supplier with their balance, or one of them with every transaction and a running balance.

View Accounts Transactions: any account of the chart, with every entry in date order and a running balance.

Set the **From** and **To** dates. Click a line to see the document it came from: an invoice, receipt, payment, expense, journal or credit note opens in a preview you can print. Lines from stock takes, depreciation, payroll, loans, petty cash or the bank statement import open the screen they were made on. The ledger can be exported to CSV or Excel, or printed.

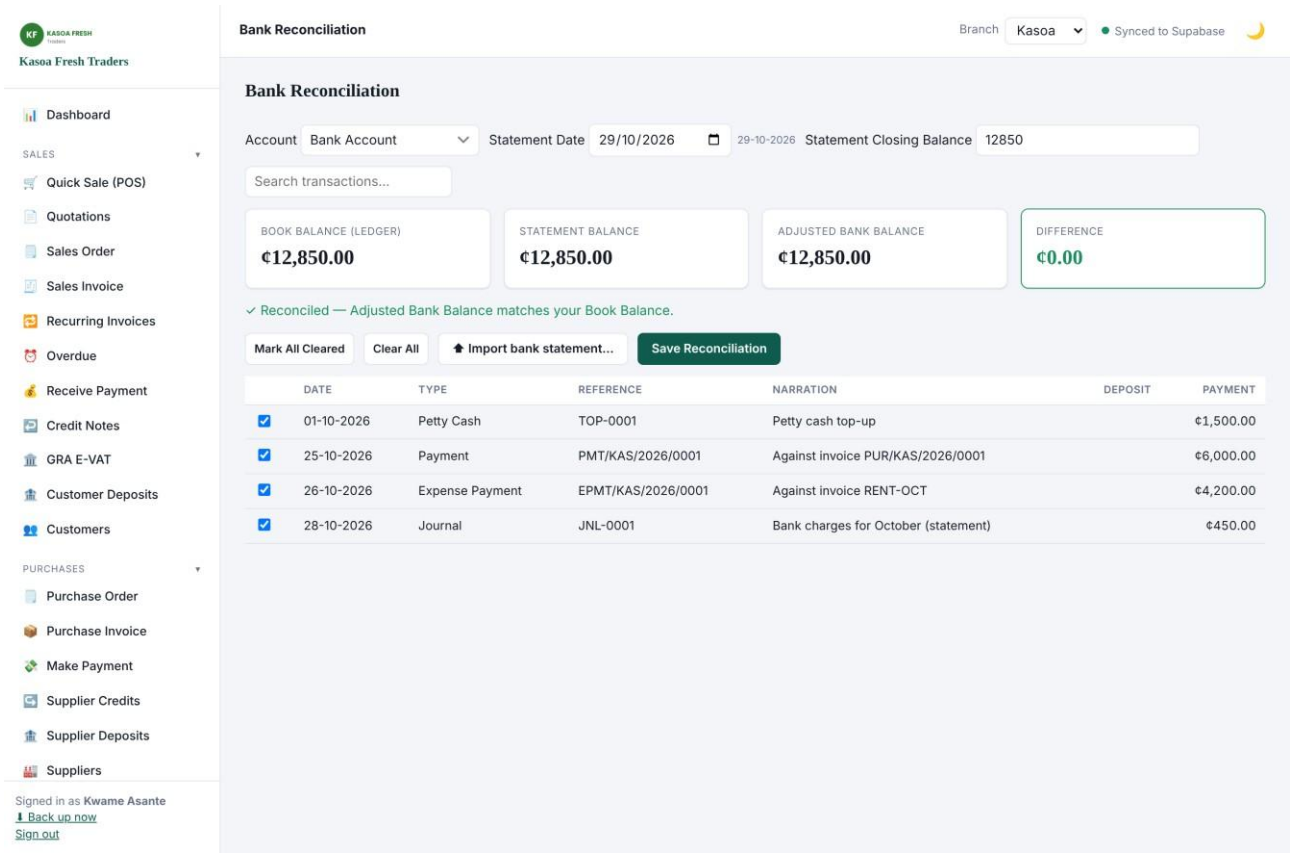

The ledger

9.3 Bank reconciliation

Reconcile each bank and Mobile Money account every month against its statement.

Open **General > Bank Reconciliation**.

Bank Reconciliation

1. Choose the **Account** and the **Statement Date**, and type the **Statement Closing Balance**.
2. The boxes show the **Book balance (ledger)**, the **Statement balance**, the **Adjusted bank balance** and the **Difference**.
3. Tick each line in the list that appears on the bank statement. **Mark All Cleared** ticks them all; **Clear All** unticks them.
4. When the Difference is zero, click **Save Reconciliation**.

Lines you have not ticked are outstanding (cheques not yet cashed, money in transit) and carry forward to next month. If the difference will not reach zero, the statement probably shows a fee, interest or a transfer that is not in your books yet; post it, then tick it.

Importing the statement

Click ⬆ **Import bank statement…** and choose the statement as a CSV or Excel file. It needs a header row with a **Date** column and **Debit/Credit** (or **Amount**) columns; a **Balance** column is used for the closing balance if present.

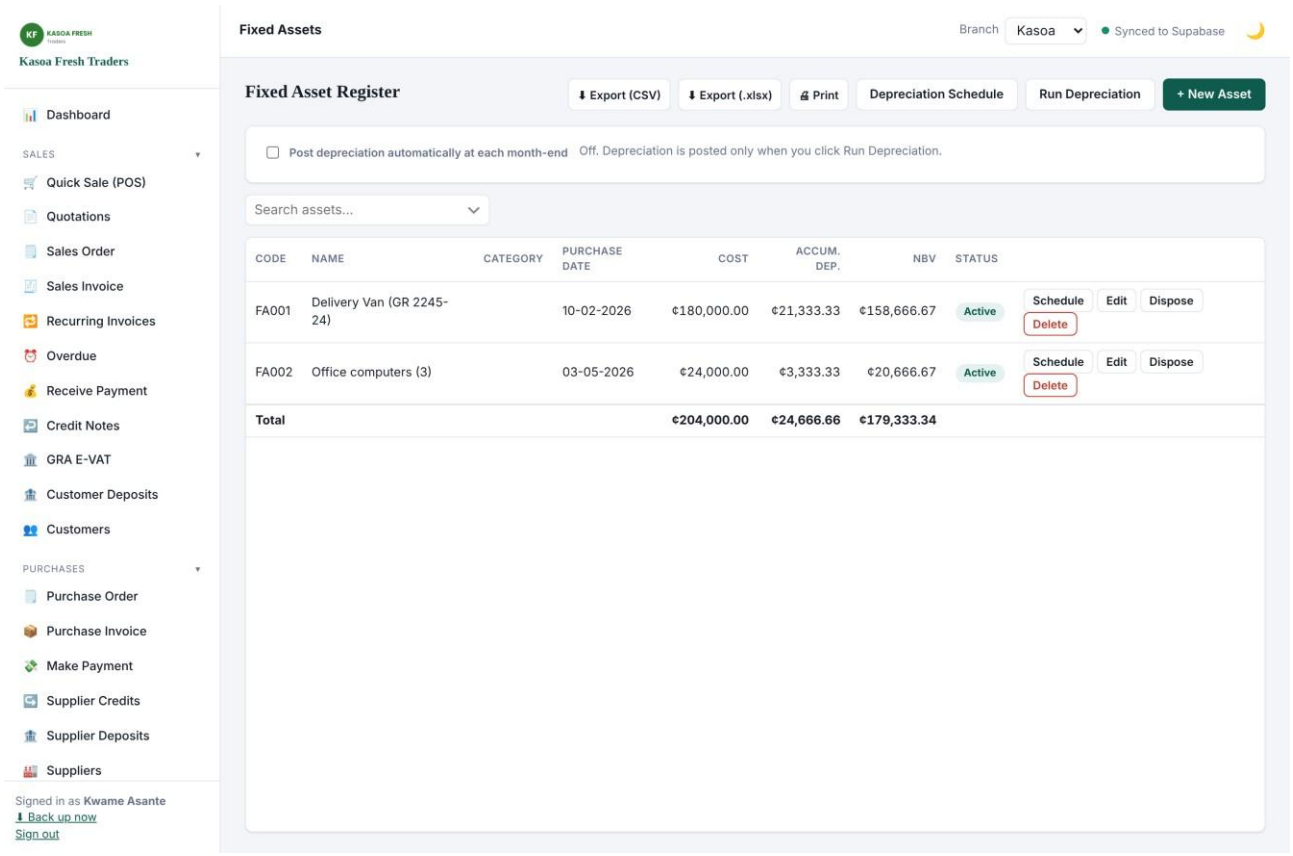

Each statement line is matched with a book entry of the same amount up to 7 days apart, and matched lines are ticked for you.

books".

Click Post… on an unmatched line to post it straight to an account (you need Journal Entry rights). Tick **Remember** to make a rule, for example "lines containing SMS ALERT go to Bank Charges", so next month's import suggests it.

9.4 Fixed assets and depreciation

Open **General > Fixed Assets**.

Fixed Asset Register

Recording an asset

1. Click **+ New Asset** and fill in the **Asset Code**, **Asset Name**, **Category**, **Purchase Date**, **Cost**, **Residual (Salvage) Value** and **Useful Life (Years)**.
2. For an asset bought before you started using the program, type its **Accumulated Depreciation to Date**.
3. Choose the **Asset Account**, **Accumulated Depreciation Account** and **Depreciation Expense Account**.
4. Choose the **Depreciation method** (the default comes from Admin, section 3.4).
5. Answer **Has the cost been recorded already?** (below) and click **Save**.

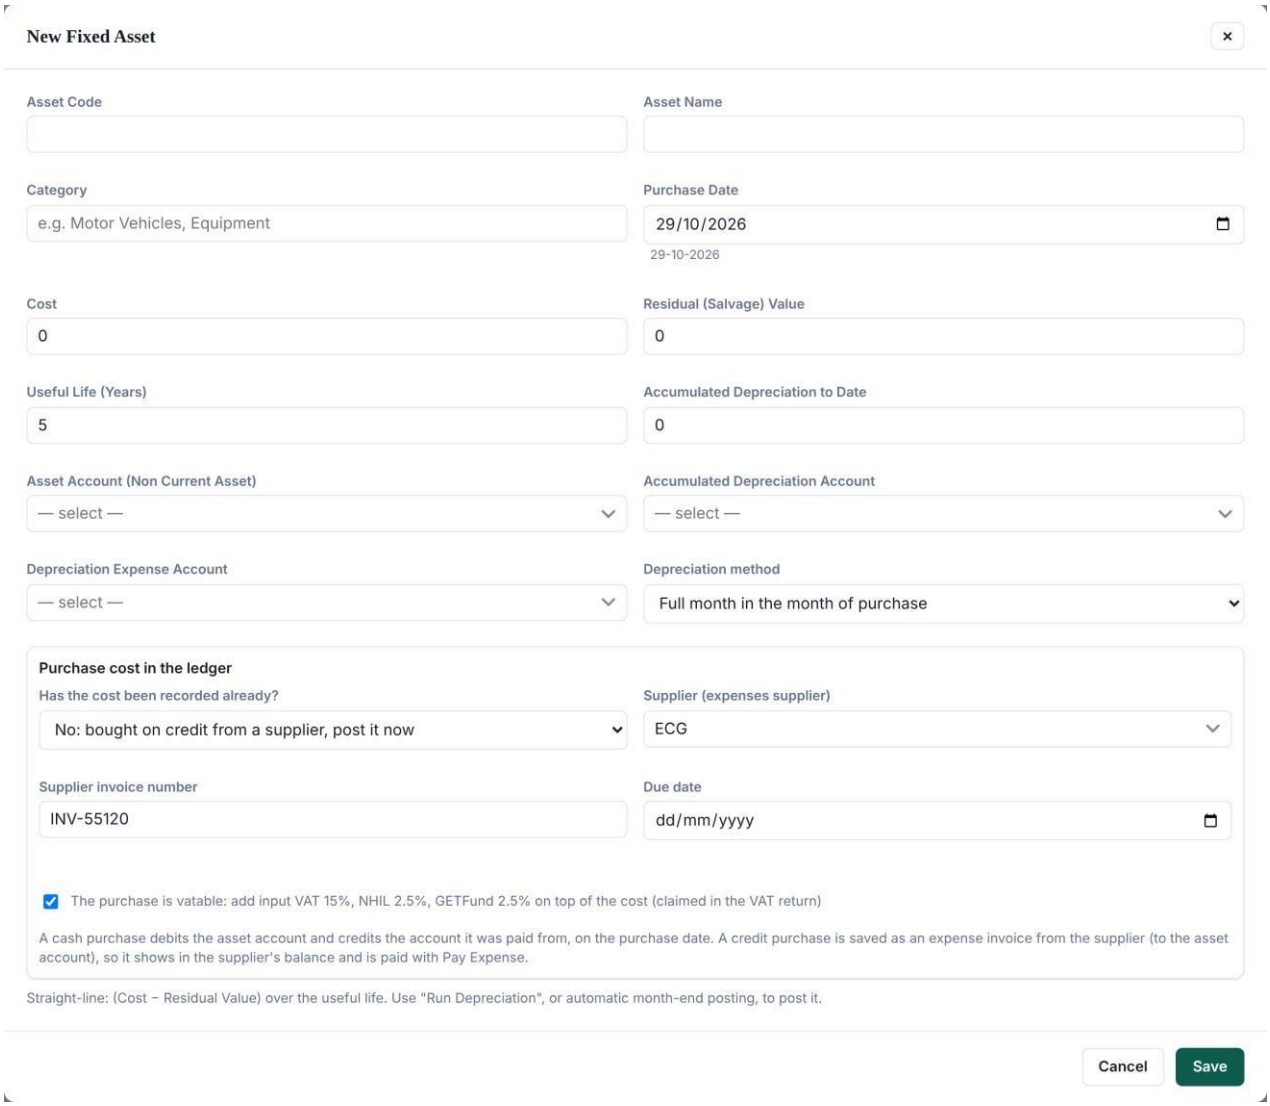

Has the cost been recorded already? A new asset must answer this question:

> **Yes, already recorded (journal, purchase or opening balance):** nothing is posted. Use this for assets you already had when you started, or whose purchase you entered another way.
>
> **No: a cash purchase, post it now:** choose **Paid from / credit account** (cash, bank, Mobile Money, a loan or the owner's account). The program debits the asset account and credits that account on the purchase date.
>
> **No: bought on credit from a supplier, post it now:** choose the **Supplier** (an expenses supplier), type the **Supplier invoice number** and the **Due date**. The purchase is saved as that supplier's expense invoice to the asset account, so it shows in their balance and you pay it later with **Pay Expense** (section 7.5).

For a cash or credit purchase, tick **The purchase is vatable** when the supplier charged VAT. Input NHIL, GETFund and VAT are then added on top of the cost and claimed in the VAT Return. A Yes/No box shows every line before anything is posted.

If you later change the cost, date or accounts, the same entry is updated, never posted twice. On an asset whose cost was posted, **Purchase cost entry** offers **Keep it posted** or **Remove it from the ledger**. An asset whose

supplier invoice still exists cannot be deleted: delete or change the invoice in Enter Expenses first. Once that invoice has payments, its amount can no longer be changed from the asset.

New Fixed Asset

Depreciation methods. All are straight line, (cost minus residual value) spread over the useful life. They differ in how the first and last month are counted: **Full month in the month of purchase**, **Mid-month** (half a month at the start and the end), **Daily** (by the days held), or **Whole months, starting the month after purchase**.

Running depreciation. Click **Run Depreciation**, choose **Post Depreciation Through** (a date), check the amount for each asset and click **Post Depreciation**. It debits the depreciation expense account and credits accumulated depreciation.

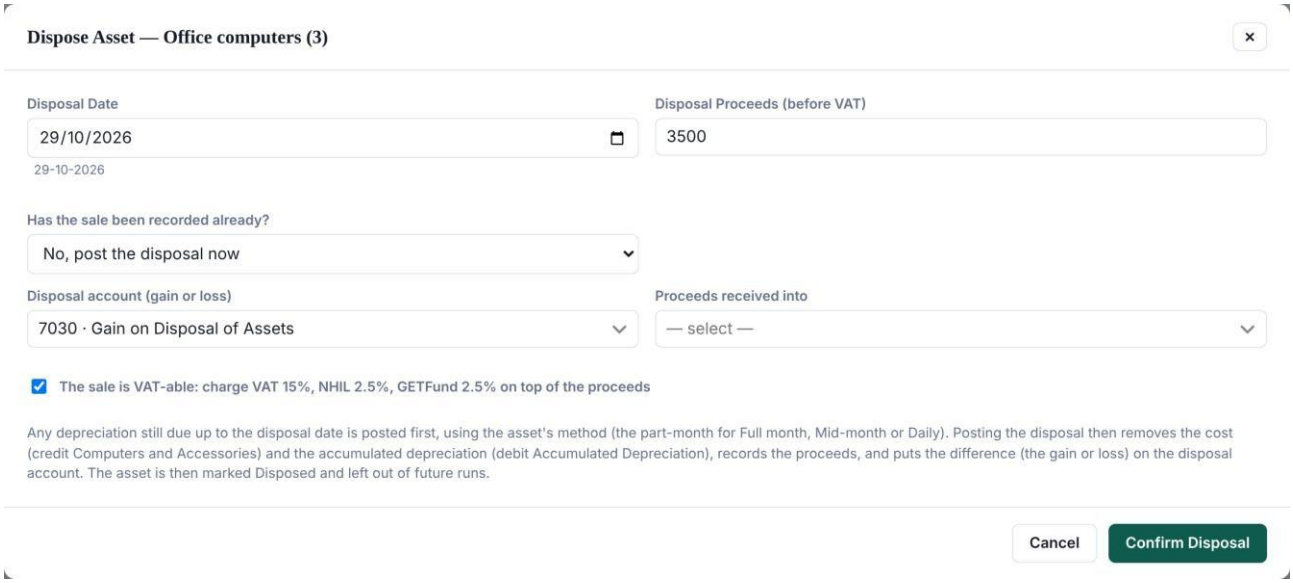

Automatic month-end depreciation. Tick **Post depreciation automatically at each month-end** on the Fixed Assets screen. Each month's depreciation is then posted when someone with the "automatic month-end depreciation" right (section 4.5) opens the program after the month ends. While it is off, depreciation is posted only when you click Run Depreciation.

Depreciation Schedule shows, for one asset or all, the opening book value, depreciation, accumulated depreciation and closing book value **by year** or **by month**, and whether each period is posted or still to post. It can be exported or printed.

Disposing of an asset. Click **Dispose** and enter the **Disposal Date** and the **Disposal Proceeds (before VAT)**. Then answer **Has the sale been recorded already?**

No, post the disposal now: choose the **Disposal account (gain or loss)** and the account the **Proceeds received into** (cash, bank, Mobile Money and so on). The default disposal account is "Disposal of Fixed Assets"; if you don't have one, the program makes it the first time (as other income). The program posts any depreciation still due up to the disposal date, removes the cost and the accumulated depreciation, records the proceeds, and puts the gain or loss on the disposal account.

Yes, already recorded with a Journal Entry: nothing more is posted; the asset is only marked Disposed.

Dispose Asset

VAT on the sale. When the asset is sold to a customer with VAT, tick **The sale is VAT-able**. The cash or bank account then receives the proceeds plus NHIL, GETFund and VAT, and the output taxes are credited. The gain or loss is worked out on the price before VAT, and the sale is included in the VAT Return and the GRA Filing Worksheet.

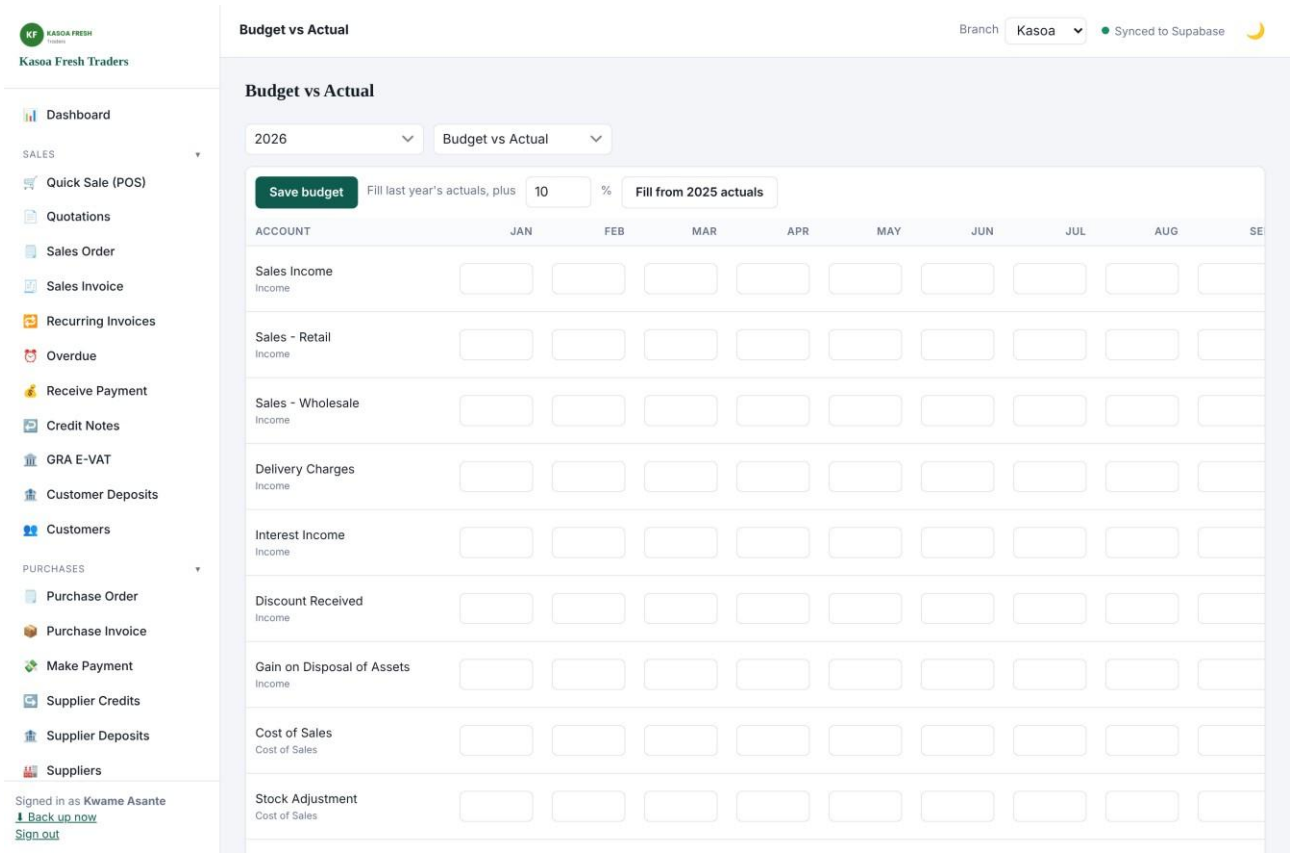

A Yes/No box shows every line before anything is posted. Click **Confirm Disposal**. Deleting an asset removes the cost and disposal entries the register posted; depreciation already posted stays.

9.5 Budgets

Open **General > Budget vs Actual**.

1. Choose the year and select **Edit budget**.
2. Type the budget for each income, cost of sales and expense account for each month. **Fill last year's actuals,** fills the year from last year's figures with an increase you choose; Jan → all copies a row's January figure to every month.
3. Click **Save budget**.

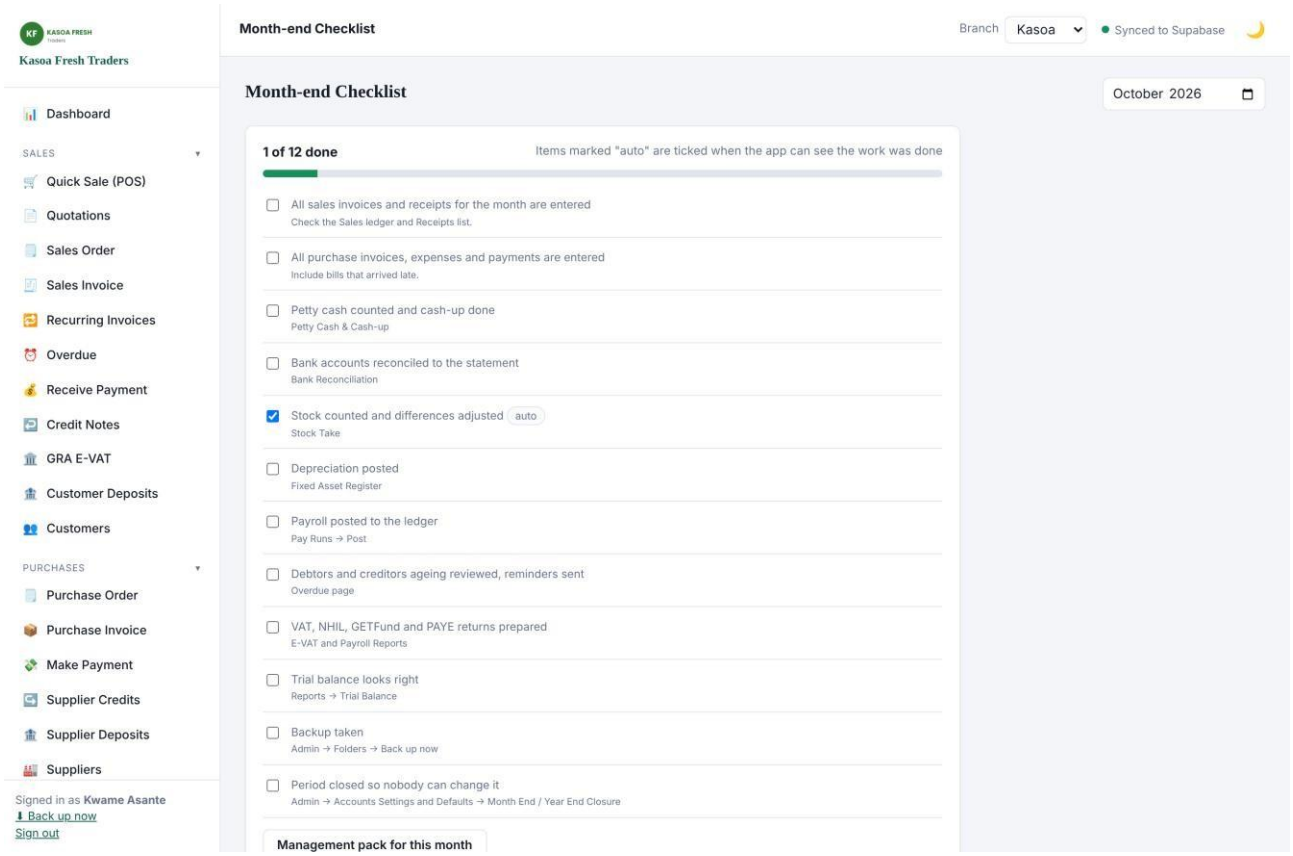

Budget vs Actual the percentage for each account, grouped as Income, Cost of Sales and Expenses, with net profit. Good variances show in green, bad ones in red.

Budget vs Actual

9.6 Month-end checklist and management pack

Open **General > Month-end Checklist** and choose the month.

Month-end Checklist

The checklist has 12 items. Items marked **auto** are ticked by the program when it can see the work was done; tick the others yourself.

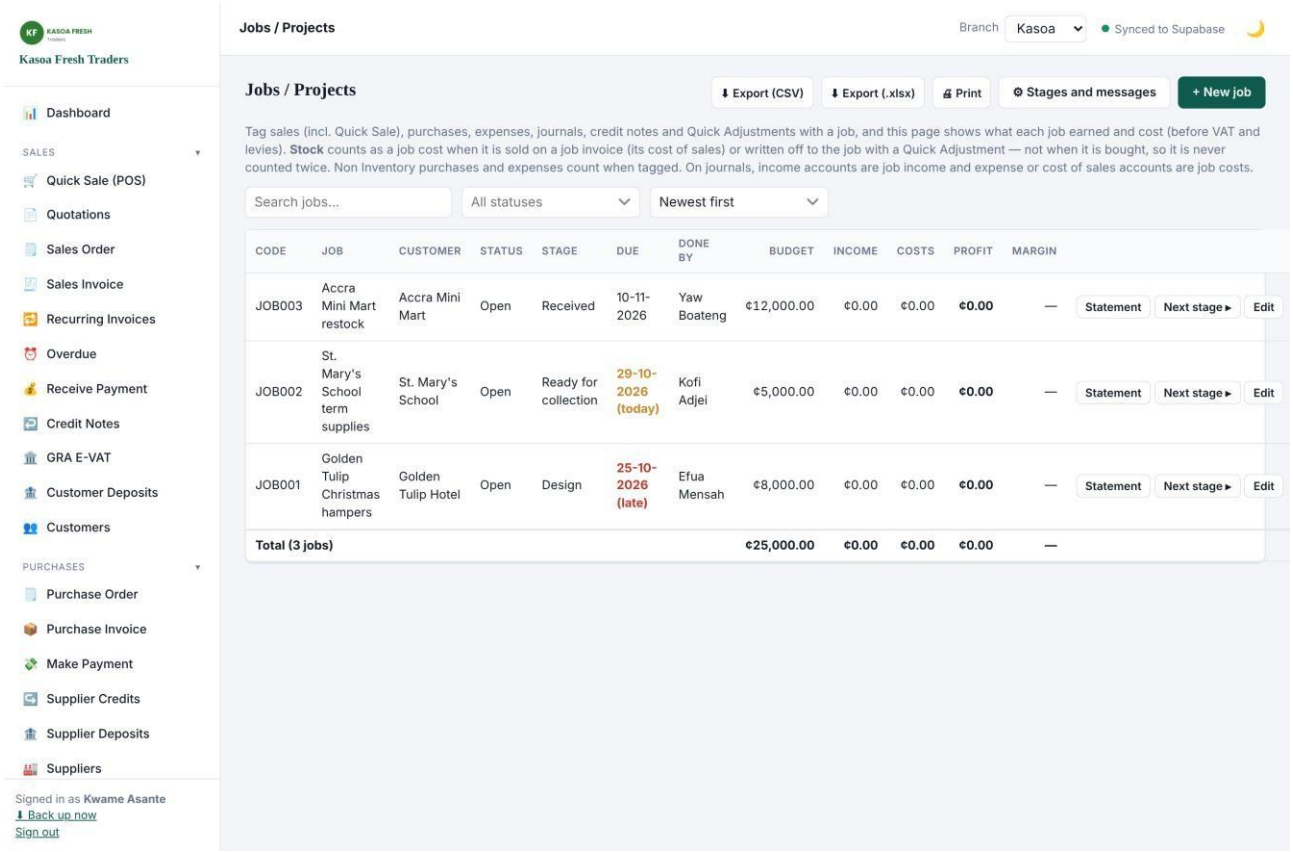

1. All sales invoices and receipts for the month are entered.
2. All purchase invoices, expenses and payments are entered (include bills that arrived late).
3. Petty cash counted and cash-up done.
4. Bank accounts reconciled to the statement.
5. Stock counted and differences adjusted.
6. Depreciation posted.
7. Payroll posted to the ledger.
8. Debtors and creditors ageing reviewed, reminders sent.
9. VAT, NHIL, GETFund and PAYE returns prepared.
10. Trial balance looks right.
11. Backup taken.
12. Period closed so nobody can change it (Accounts Settings and Defaults > Month End / Year End Closure, section 3.4).

Management Pack (General > Management Pack) builds one printable pack for the owner, board or bank: choose the **Month**, type an optional **Comment from management** and click **Build the pack**. It contains the headline figures, profit and loss, cash and bank at month end, the balance sheet, debtors and creditors ageing, the best customers of the month, jobs and payroll cost. Save it as PDF from the print preview.

9.7 Jobs and projects

Use jobs to see what each job, order or project earned and cost, and to follow it through its stages.

Open **General > Jobs / Projects**.

Jobs / Projects

Adding a job

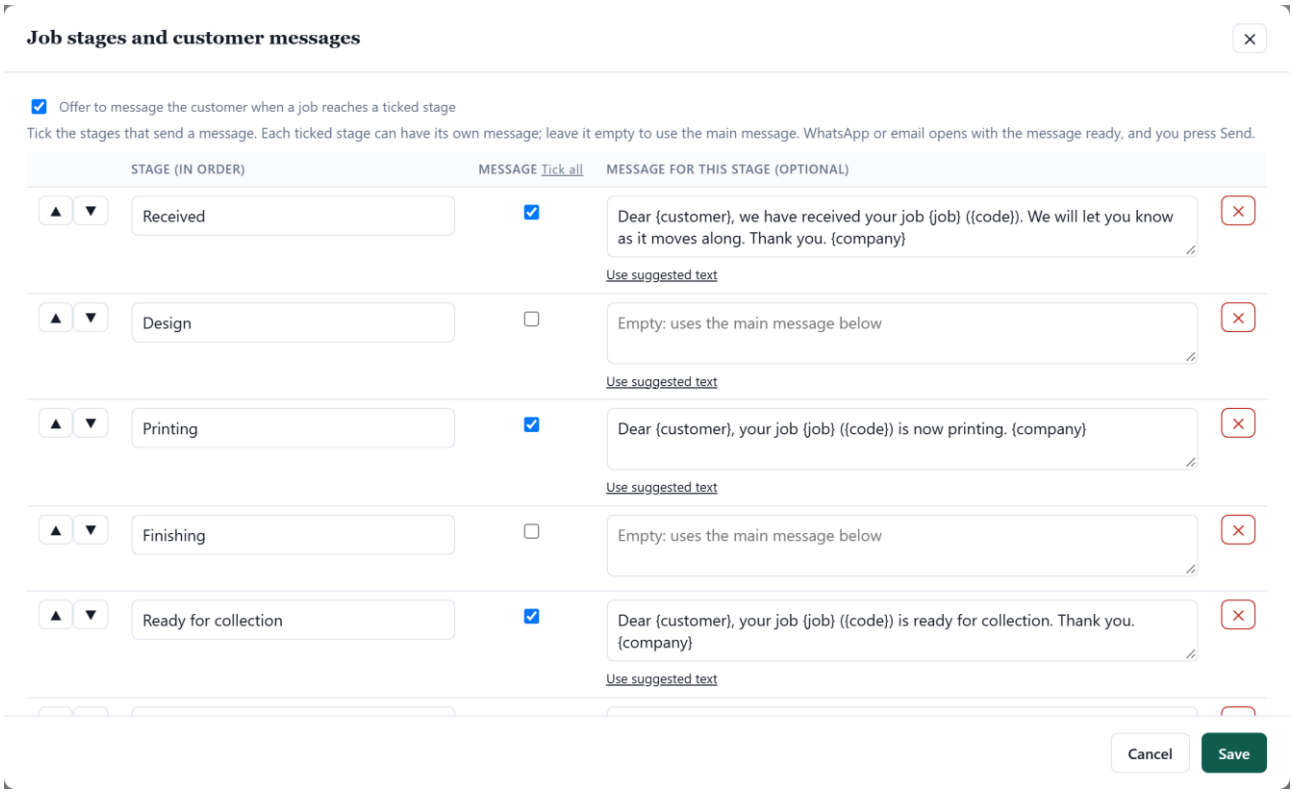

1. Click **+ New job**.
2. Type the **Code** and **Name**, and choose the **Customer**.
3. Enter the **Cost budget**, **Status** (Open, On hold or Closed), **Start date** and **Due date**.
4. Type or pick who it is **Done by** (your team and staff are suggested) and the **Stage**, with an optional note on the stage.
5. Click **Save**.

Tagging transactions. Sales invoices (including Quick Sale), purchases, expenses, journals, credit notes, customer deposits and Quick Adjustments have a **Job / project** box. The jobs list then shows each job's **Income**, **Costs**, **Profit** and **Margin** (before VAT and levies) against its budget. Stock counts as a job cost when it is sold on a job invoice (its cost of sale) or written off to the job with a Quick Adjustment. **Statement** prints everything posted to a job.

Stages. The stages start as Received, Design, Printing, Finishing, Ready for collection and Delivered. Click **Next stage ▸** to move a job on; each move is recorded with the date and the person. Late jobs show **(late)** in red and jobs due today show **(today)**, and both appear at the top of the Dashboard. Filter the list by status, including **Late**.

Stages and messages. Click **⚙ Stages and messages** to change the stages (one per line, in order; ▲ and ▼ move a stage) and to choose which stages message the customer. Tick **Offer to message the customer when a job reaches a ticked stage**, then tick each stage that should send a message, or click **Tick all**. Each ticked stage can have its own message; leave it empty to use the main message. **Use suggested text** fills in a ready-made message for Received, Design, Printing, Ready for collection and Delivered. {customer}, {job}, {code}, {stage}, {due} and {company} are filled in for you.

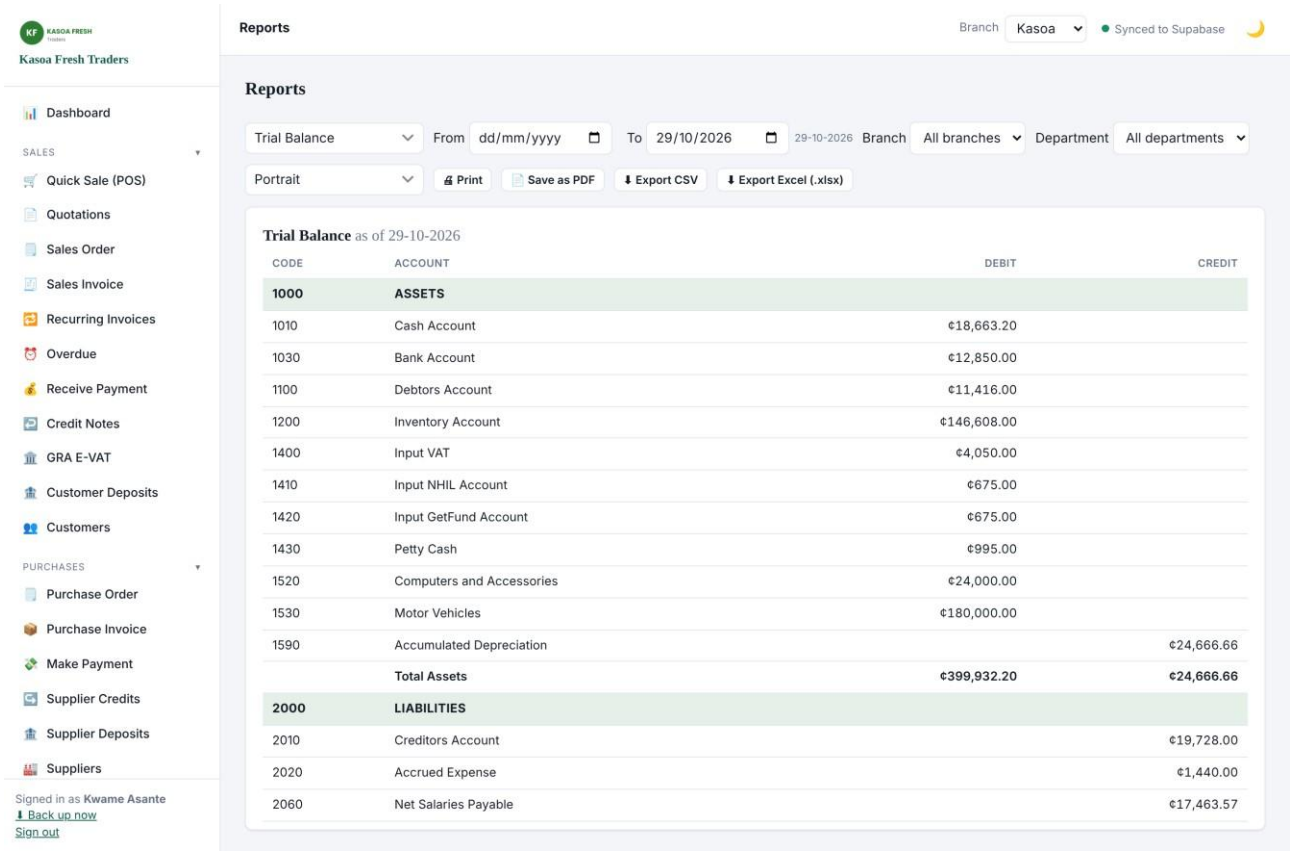

When a job reaches a ticked stage (including a new job saved at a ticked first stage), the **Tell the customer** window offers **WhatsApp**, **✉ Email** or **Not now**. WhatsApp or email opens with the message ready, and you press Send. Each message sent is noted on the job's progress and on the printed Statement, with how, when and by whom.

Job stages and customer messages

10. Reports

Open **Reports** from the menu. Choose a report from the list at the top and set the **From** and **To** dates. With branches or business units, choose a **Branch** and **Business unit** too. Choose **Portrait** or **Landscape** for printing.

Reports

Every report has **Print**, **Save as PDF**, **Export CSV** and **Export Excel (.xlsx)**. The printed report carries your logo, company details and the date printed. Click a line in the Trial Balance, Profit & Loss or Balance Sheet to see the transactions behind it.

The reports

Group	Report	What it shows
Financial statements	Trial Balance	Every account's debit or credit balance. The totals must agree.
	Profit & Loss	Income, cost of sales, gross profit, expenses and net profit for the period.
	Balance Sheet	Assets, liabilities and equity at the To date.
	Business Unit Profit	Revenue, costs, gross profit, share of overheads and contribution for each business unit.
	Statement of Cash Flows	Where cash came from and went: operating, investing and financing.
Tax	VAT Reconciliation (GRA)	Output VAT, NHIL and GETFund on sales against the input amounts you can claim.
	GRA Filing Worksheet (monthly)	The tax figures for each month of the year with the due date and filing status.
	WHT Register	Every withholding deduction, with the base before VAT, and a certificate for each.
	WHT Reconciliation (GRA)	What you owe GRA and what customers withheld from you, by rate.

Group	Report	What it shows
	WHT Threshold Tracker (suppliers)	Each supplier's payments in the year against the ¢2,000 threshold.
	Provisional Tax Estimate	A planning estimate of company income tax.
Debtors and creditors	Aged Debtors, Aged Creditors	Balances by age: current, 30, 60, 90 and over 90 days.
	Debtors List, Creditors List, Accrued Expenses List	Who owes you, whom you owe, and unpaid expense bills.
	Client Ledger	One customer's or supplier's transactions.
Stock	Stock / Product Summary	Quantity, levels, cost, value and status of each product.
	Product Movement	Every movement of a product.
History	Customer Sales History, Product Sales History, Supplier Purchases History, Product Purchases History, Expenses History, Receipts History, Payments History	Lists of past transactions, to filter and export.
Orders	Sales Orders & Outstanding, Purchase Orders & Outstanding	Orders with what is still to deliver or receive.

In Non Profit mode the list changes to the non-profit reports (section 12.5).

10.1 Branch and business unit reports

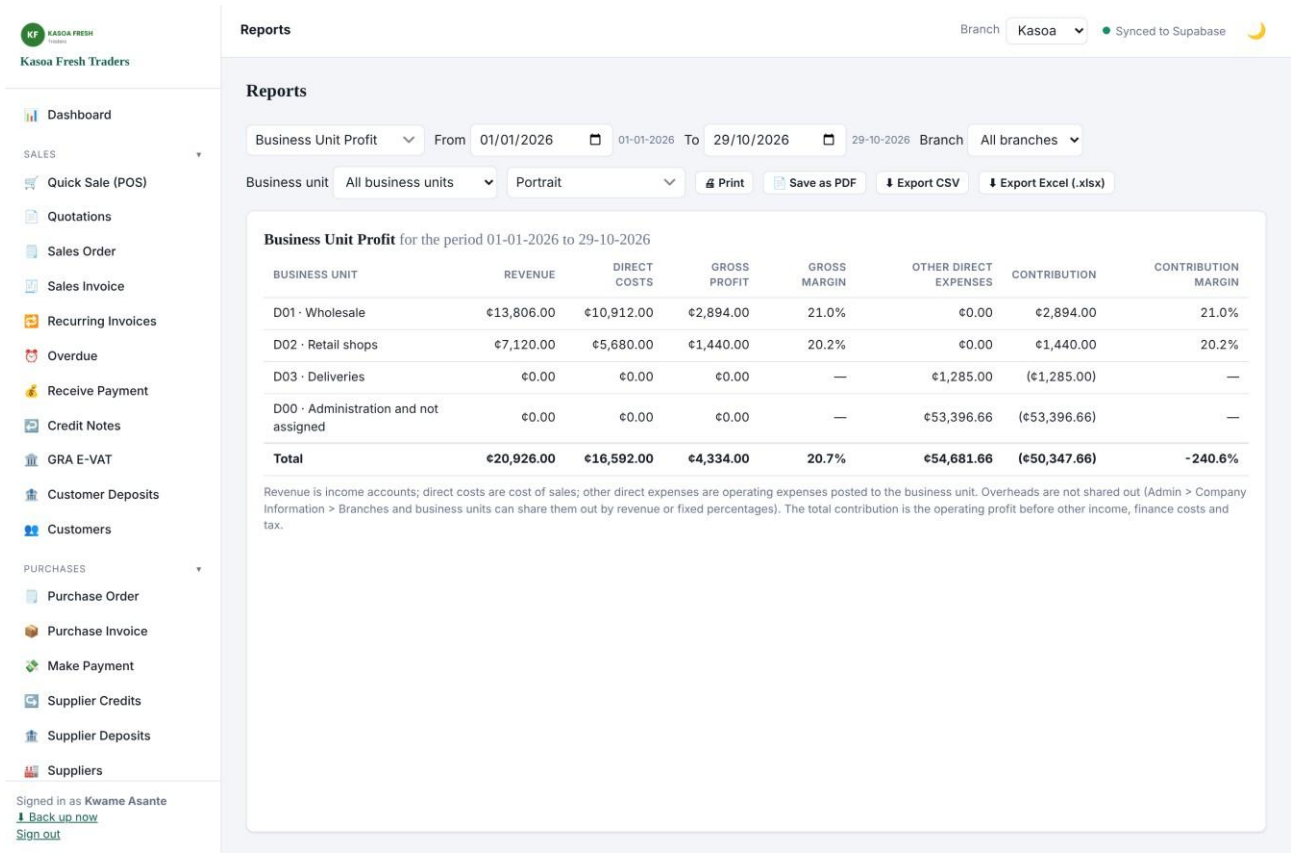

When the company has branches or business units, the **Branch** and **Business unit** boxes appear on the Reports screen. Choose one to see only what was entered there; a note at the top says so. A person who does not see every branch can only choose their own branches ("All my branches").

A branch report includes the branch's own opening balances when they were entered by branch on the accounts (section 3.8), so a branch Trial Balance and Balance Sheet start from the right figures.

A business unit report has no opening balances: it shows the movement in the period.

Business Unit Profit. Choose **Business Unit Profit** in the report list. For each business unit it shows:

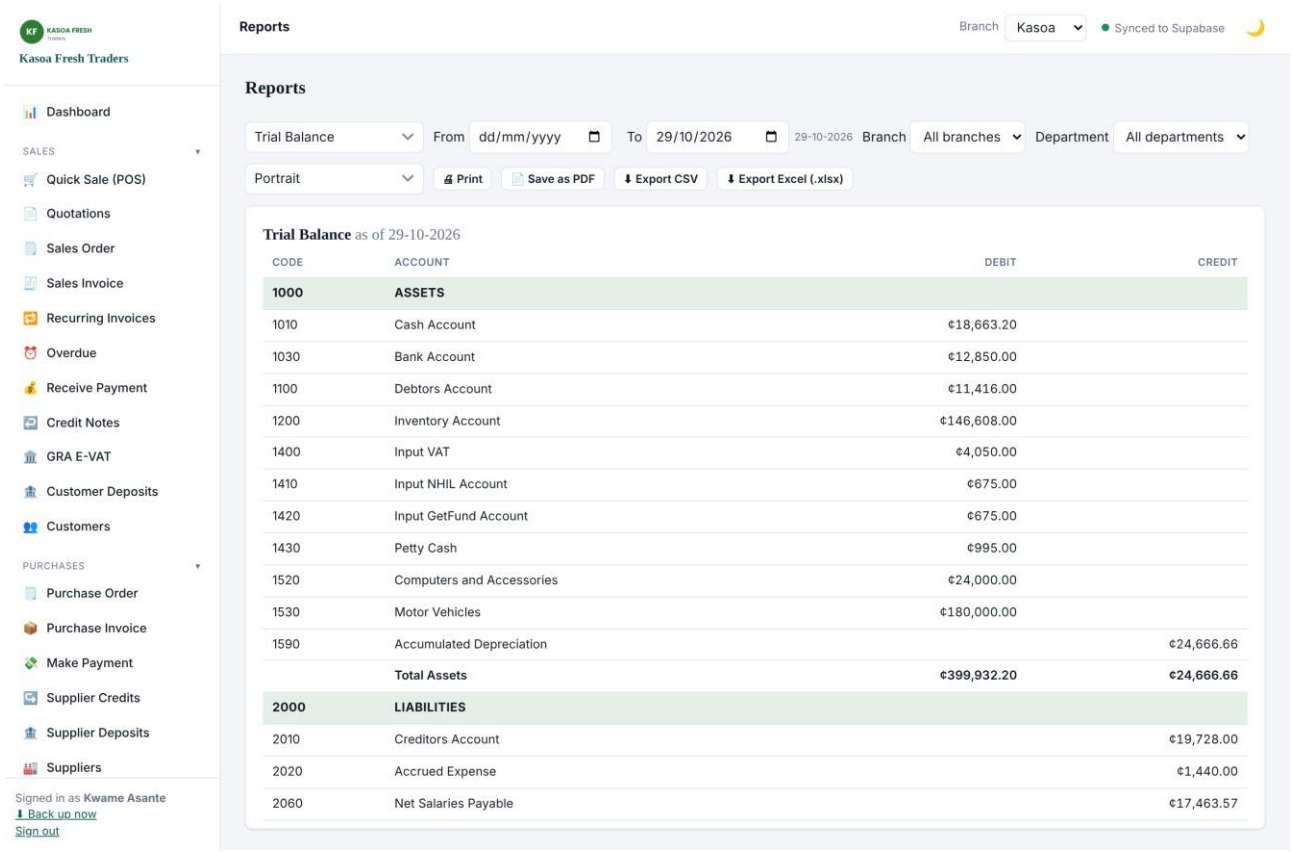

Column	What it is
Revenue	Income accounts posted to the unit
Direct costs	Cost of sales posted to the unit
Gross profit and margin	Revenue less direct costs, and as a percentage of revenue
Other direct expenses	Operating expenses posted to the unit
Share of overheads	The shared unit's and unassigned operating expenses, shared out as set in Branches and business units (section 3.2); empty when you don't share them out
Contribution and margin	What the unit adds to the company's profit, and as a percentage of revenue

Business Unit Profit

A row shows the shared and unassigned amounts, then a total. The total contribution is the operating profit before other income, finance costs and tax. The report can be run for one branch. The Dashboard has the same figures in the Profit by business unit card (section 2.6).

10.2 Trial Balance

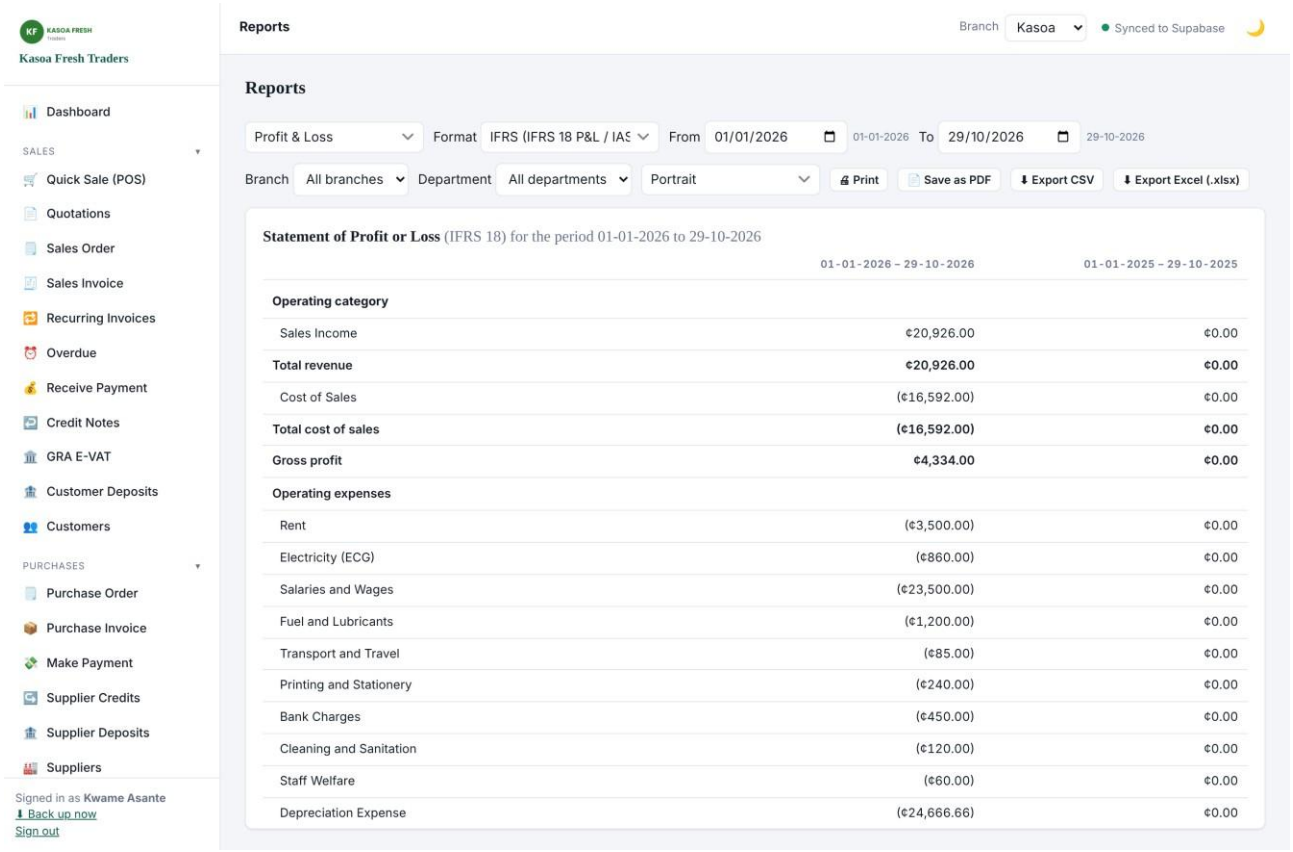

CODE	ACCOUNT	DEBIT	CREDIT
1000	**ASSETS**		
1010	Cash Account	¢18,663.20	
1030	Bank Account	¢12,850.00	
1100	Debtors Account	¢11,416.00	
1200	Inventory Account	¢146,608.00	
1400	Input VAT	¢4,050.00	
1410	Input NHIL Account	¢675.00	
1420	Input GetFund Account	¢675.00	
1430	Petty Cash	¢995.00	
1520	Computers and Accessories	¢24,000.00	
1530	Motor Vehicles	¢180,000.00	
1590	Accumulated Depreciation		¢24,666.66
	Total Assets	**¢399,932.20**	**¢24,666.66**
2000	**LIABILITIES**		
2010	Creditors Account		¢19,728.00
2020	Accrued Expense		¢1,440.00
2060	Net Salaries Payable		¢17,463.57

Trial Balance

With the numbered chart (section 3.7), the accounts are grouped under their headings (1000 Assets, 2000 Liabilities, 3000 Equity, 4000 Income, 5000 Cost of Sales, 6000 Operating Expenses, 7000 Other income and tax) with a subtotal for each. The total debits must equal the total credits. If they do not, run the **Ledger Check** in General Settings (section 3.3) and contact support before you report.

10.3 Profit & Loss

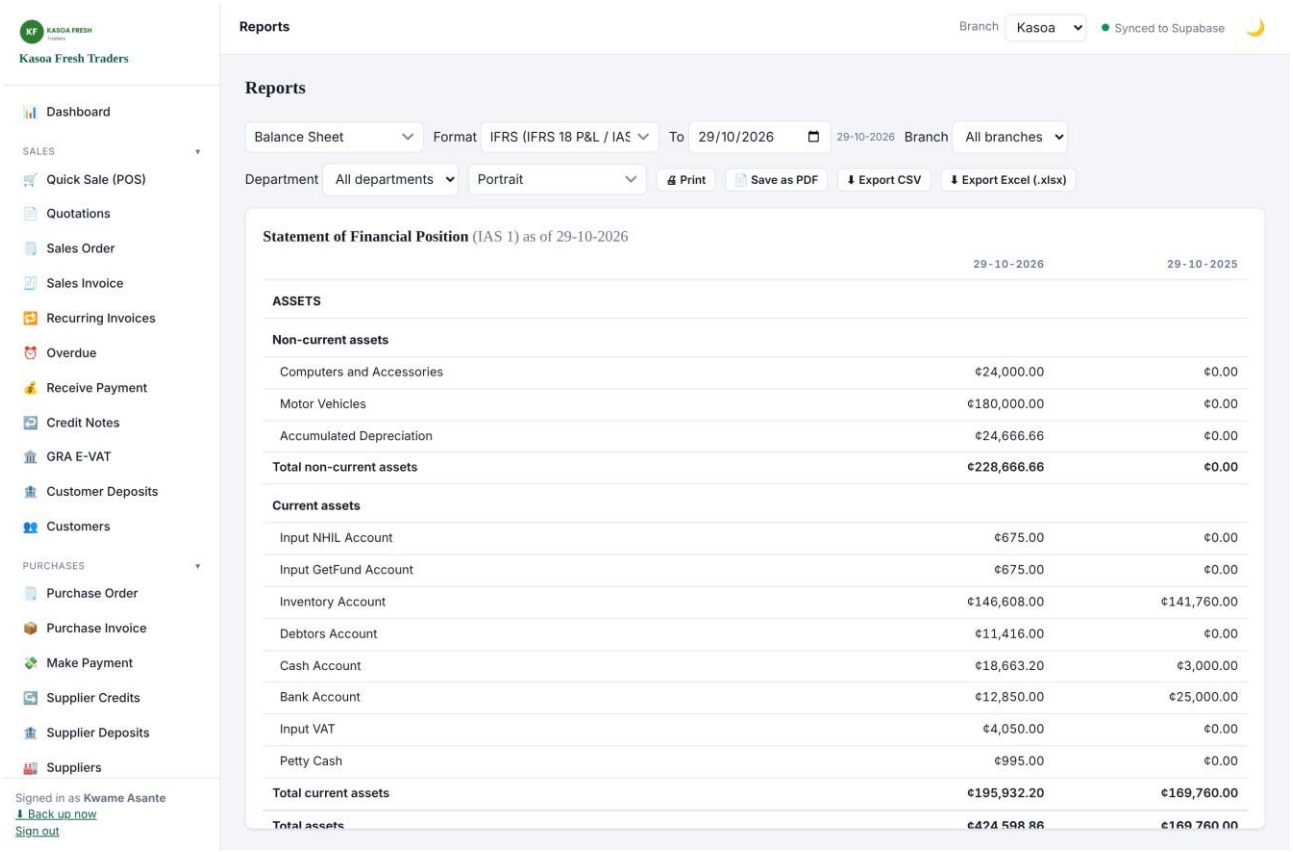

Profit & Loss (IFRS 18)

Choose the layout in the format box:

IFRS (IFRS 18 P&L / IAS 1 balance sheet): the layout of the new IFRS 18 standard. Income and expenses are placed in **Operating**, **Investing** and **Financing** categories, then income tax, with the subtotals **Operating profit** and **Profit before financing and income taxes**. Each account's category comes from its **IFRS 18 category** in the chart of accounts; **Auto** decides from the account name.

As currently prepared: the classic layout: sales, less cost of sales equals gross profit, less expenses equals net profit.

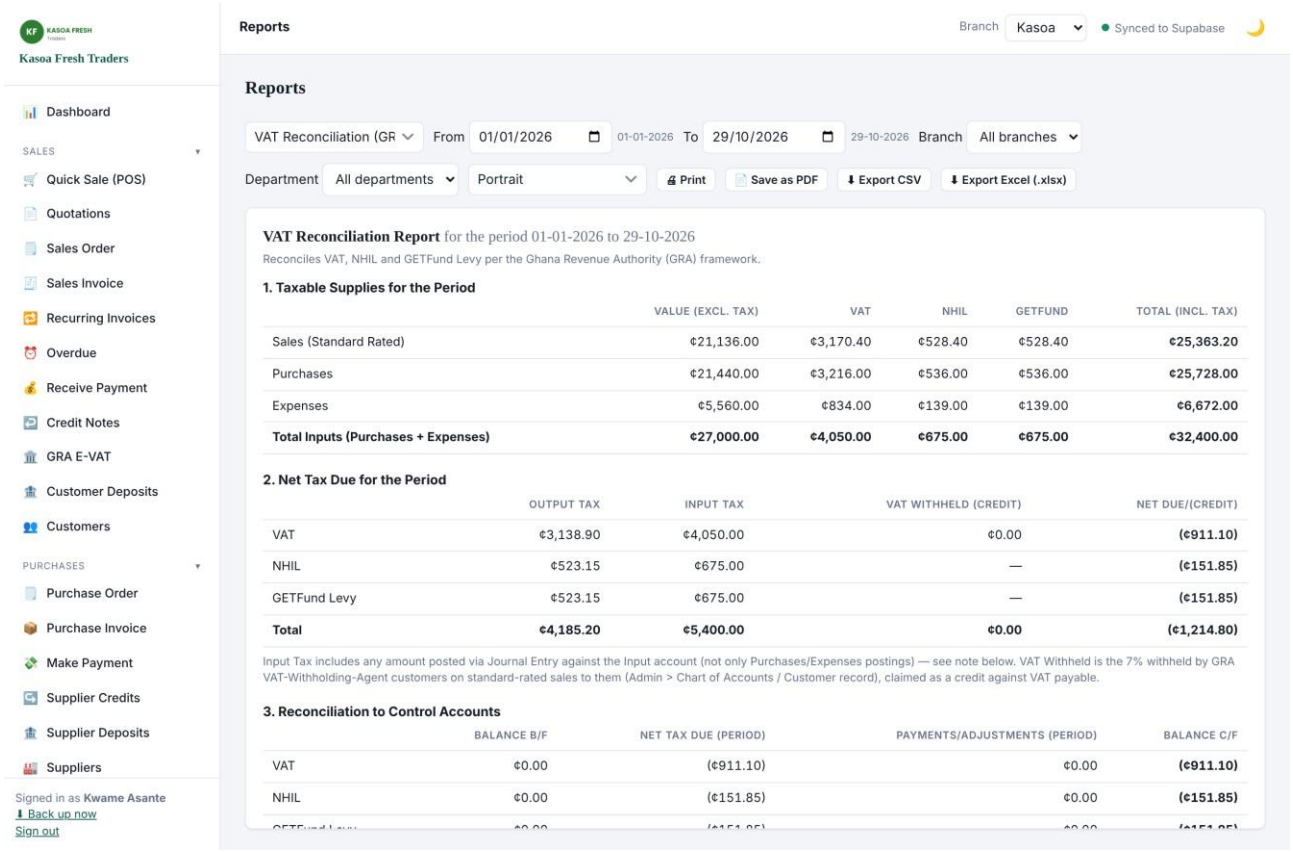

10.4 Balance Sheet

Balance Sheet

Assets must equal liabilities plus equity. The profit for the current year is included in equity automatically.

10.5 VAT, the GRA worksheet and withholding tax

VAT Reconciliation

VAT Reconciliation (GRA) separates output VAT, NHIL and GETFund on sales from the input amounts on purchases and expenses, and shows the net tax due. Older periods also show the COVID-19 levy where it was charged.

GRA Filing Worksheet (monthly) lists every month of the year with the taxable sales, NHIL, GETFund, output VAT, input VAT, net due, due date and filing status. When you have filed a month, click **Mark filed** and type the GRA acknowledgement or reference number; a month not marked by its due date shows **Overdue**.

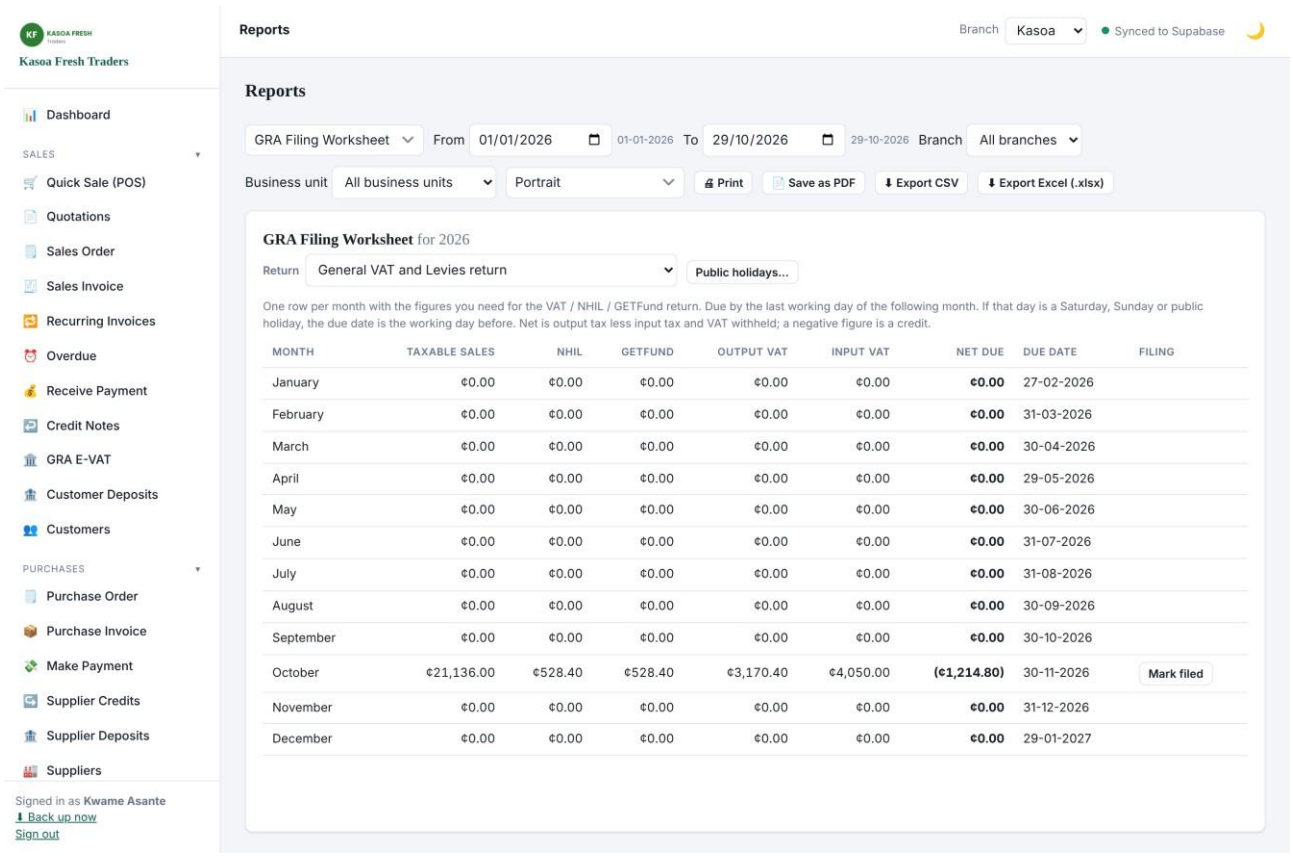

The Return box on the worksheet picks the return:

General VAT and Levies return: due on the **last working day of the following month**. If that day is a Saturday, Sunday or public holiday, the due date moves back to the working day before.

Non-resident digital / e-commerce return (Section 15): due on the last calendar day of the following month, with no moving back.

VAT withholding agent return: due on the 15th of the following month.

For the two new returns, the worksheet shows the due dates and lets you mark each month filed. It does not work out their figures.

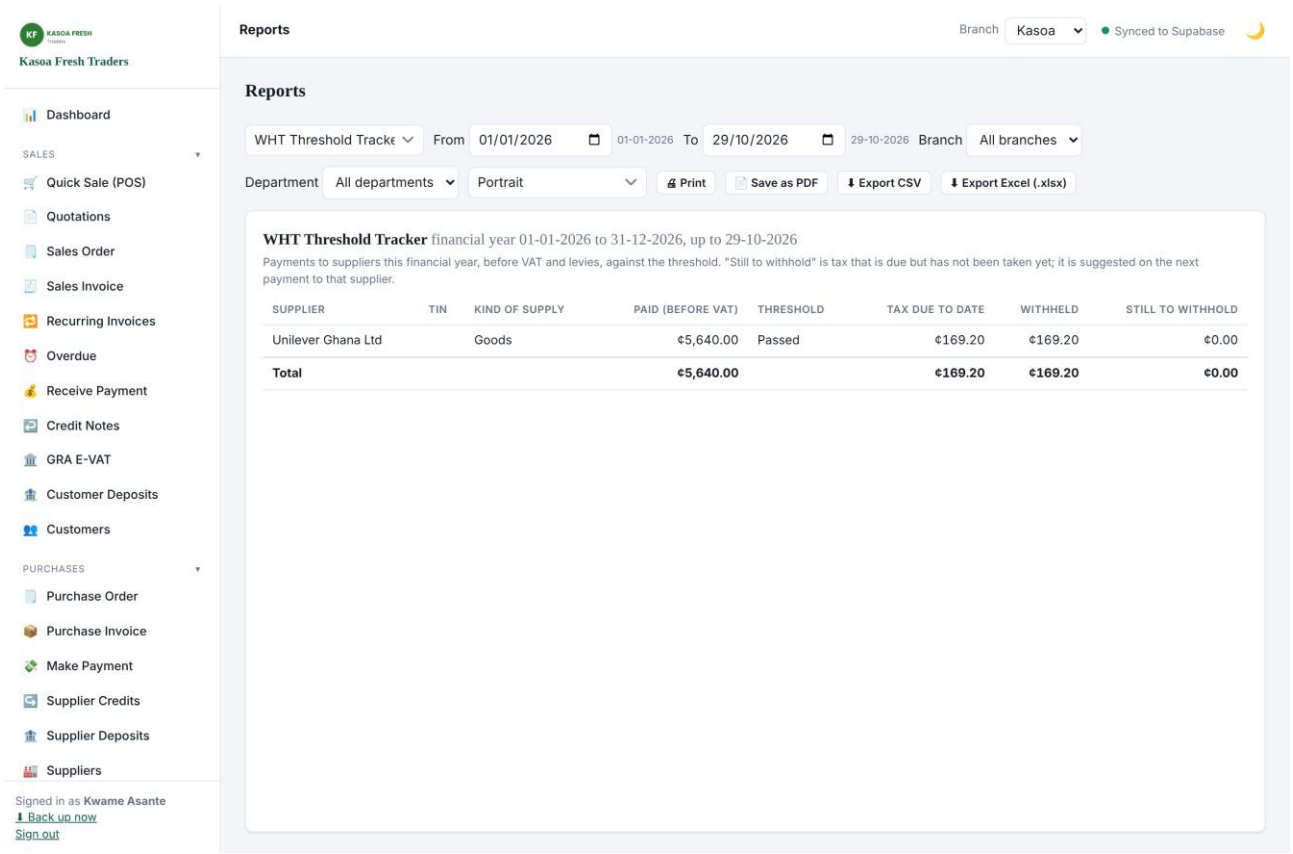

GRA Filing Worksheet with the Return box

Public holidays… on the worksheet opens the holiday list (the same list as Payroll Setup, section 11.3). The program knows Ghana's usual holidays, including Good Friday and Easter Monday. Add Eid and any day the government declares or moves each year. PAYE and withholding tax stay due on the 15th.

WHT Register lists the tax withheld from suppliers (to pay GRA) and by customers (a credit for you), with the date, type, number, party, TIN, base before VAT and the tax. Print a **Certificate** for each one.

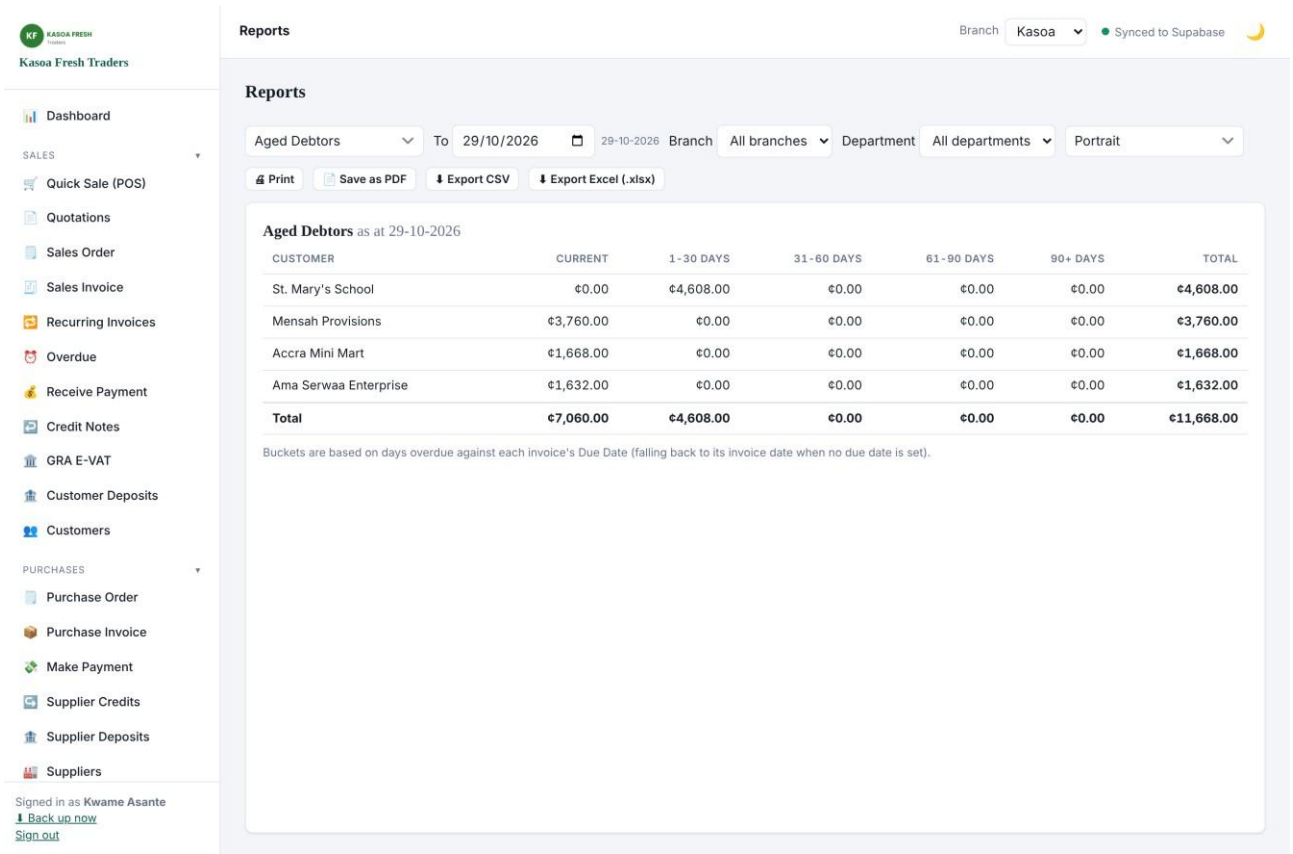

WHT Reconciliation (GRA) shows, by rate, what you owe GRA and what customers have withheld from you.

WHT Threshold Tracker (suppliers) shows each supplier's payments in the financial year against the threshold, the tax due, what has been withheld and what is still to withhold (section 7.8). Tax withheld from suppliers is due to GRA by the 15th of the following month.

WHT Threshold Tracker

10.6 Aged debtors and creditors

Aged Debtors

Each customer's (or supplier's) balance is split into current, 30, 60, 90 and over 90 days. Use it with the Overdue screen (section 6.7) to chase payments.

10.7 Provisional Tax Estimate

An estimate of company income tax on the profit so far, at the corporate tax rate in Accounts Settings and Defaults (25% to start with). It is a planning aid, not a tax computation. Your accountant must confirm the figure before you pay or file.

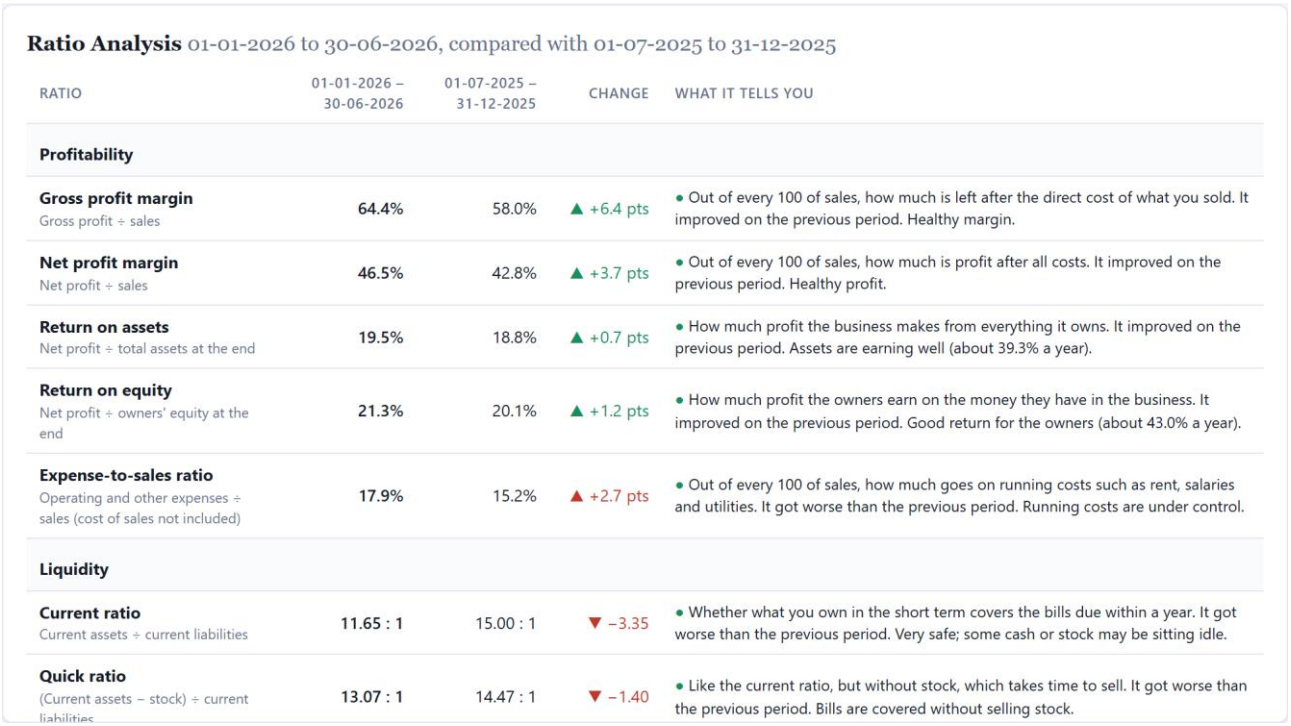

10.8 Printing and exporting

Use **Print** for paper and **Save as PDF** for a file. **Export CSV** and **Export Excel** give the table to work on further; dates follow the format in General Settings. Lists across the program (customers, products, transactions) also have Export and Print buttons at the top.

10.9 Ratio Analysis

Open **Reports** and choose **Ratio Analysis**. Pick a **Period**: This month, Last month, This quarter, This year (the default), Last year, or Custom dates (From / To).

The report shows each ratio for the period and for the period of the same length just before it, the **Change** with an ▲ or ▼ arrow (green when it got better, red when it got worse), and **What it tells you**: what the ratio means, whether it improved, and whether it looks healthy.

Ratio Analysis 01-01-2026 to 30-06-2026, compared with 01-07-2025 to 31-12-2025

RATIO	01-01-2026 – 30-06-2026	01-07-2025 – 31-12-2025	CHANGE	WHAT IT TELLS YOU
Profitability				
Gross profit margin Gross profit ÷ sales	64.4%	58.0%	▲ +6.4 pts	• Out of every 100 of sales, how much is left after the direct cost of what you sold. It improved on the previous period. Healthy margin.
Net profit margin Net profit ÷ sales	46.5%	42.8%	▲ +3.7 pts	• Out of every 100 of sales, how much is profit after all costs. It improved on the previous period. Healthy profit.
Return on assets Net profit ÷ total assets at the end	19.5%	18.8%	▲ +0.7 pts	• How much profit the business makes from everything it owns. It improved on the previous period. Assets are earning well (about 39.3% a year).
Return on equity Net profit ÷ owners' equity at the end	21.3%	20.1%	▲ +1.2 pts	• How much profit the owners earn on the money they have in the business. It improved on the previous period. Good return for the owners (about 43.0% a year).
Expense-to-sales ratio Operating and other expenses ÷ sales (cost of sales not included)	17.9%	15.2%	▲ +2.7 pts	• Out of every 100 of sales, how much goes on running costs such as rent, salaries and utilities. It got worse than the previous period. Running costs are under control.
Liquidity				
Current ratio Current assets ÷ current liabilities	11.65 : 1	15.00 : 1	▼ −3.35	• Whether what you own in the short term covers the bills due within a year. It got worse than the previous period. Very safe; some cash or stock may be sitting idle.
Quick ratio (Current assets − stock) ÷ current liabilities	13.07 : 1	14.47 : 1	▼ −1.40	• Like the current ratio, but without stock, which takes time to sell. It got worse than the previous period. Bills are covered without selling stock.

Ratio Analysis

Profitability: gross profit margin, net profit margin, return on assets, return on equity and the expense-to-sales ratio. **Liquidity**: current ratio, quick ratio and cash ratio. **Efficiency**: debtor days, creditor days and stock turnover. **Gearing**: debt to equity and interest cover.

The figures come from the same numbers as the Profit & Loss and the Balance Sheet, so they always agree; the figures used are listed below the ratios. When a ratio can't be worked out (for example with no sales or no stock), it shows n/a with a short reason. Print it, save it as PDF or export it like any other report.

11. HR and Payroll

The **HR / Employees** group (HR Dashboard, Employees, Staff Records, Staff Requests, Leave, Attendance, Staff Loans) and the **Payroll** group (Payroll Dashboard, Pay Runs, Tax Tables, Payroll Reports, Payroll Setup, My Payslips) make up the **Payroll add-on**. It has its own licence key, priced per employee (section 11.2). Records can be added or changed only while that licence is active; when it ends, payroll becomes read-only for a grace period.

Give these rights only to people who may see staff pay (section 4.5). Each employee can see their own payslips in **My Payslips**.

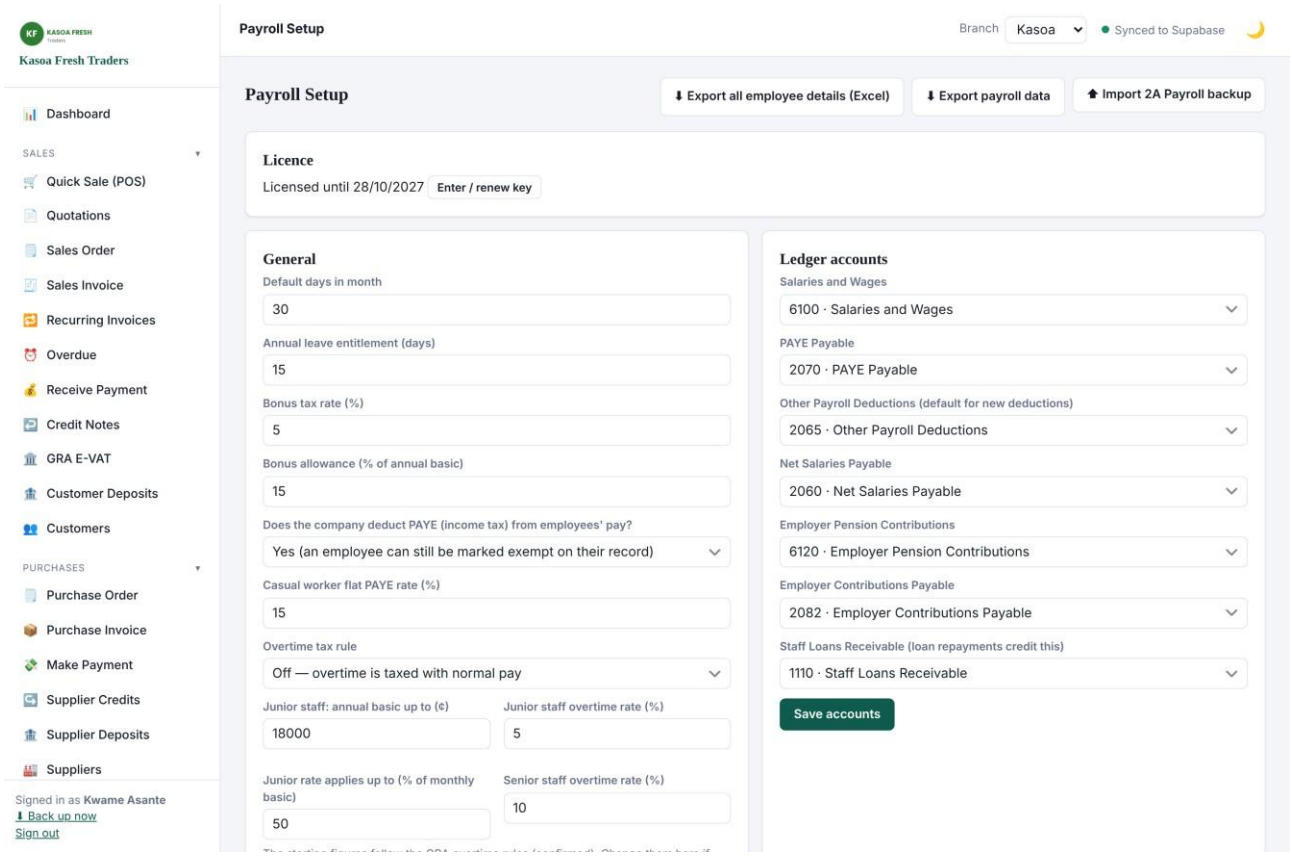

11.1 Before the first pay run

1. Enter the payroll licence key (11.2).
2. Check **Payroll Setup** (11.3): the general settings, the ledger accounts, the earnings and deductions, and the lists (job titles, departments, levels, branches).
3. Check the **Tax Tables** for the year (11.9).
4. Add your employees (11.4).
5. Create the month's pay runs (11.6), check them, and post them to the ledger (11.7).

11.2 The payroll licence

Open **Payroll > Payroll Setup**. The **Licence** line shows "Licensed until ...". Click**Enter / renew key**, paste the payroll key and save. The key is checked by the licence server.

11.3 Payroll Setup

Payroll Setup

General

Setting	What it does
Default days in month	Used for the daily rate (salary ÷ days) when someone is absent.
Annual leave entitlement (days)	The company default, 15 to start with. Levels and each employee can have their own (below).
Bonus tax rate (%) and Bonus allowance (% of annual basic)	Bonus up to the allowance (15% of annual basic) is taxed at the bonus rate (5%); the rest is taxed with normal pay.
Does the company deduct PAYE?	**Yes** (an employee can still be marked exempt on their record) or **No, the company doesn't deduct PAYE**.
Casual worker flat PAYE rate (%)	The flat rate for casual workers (15%).
Overtime tax rule	**Off** (overtime is taxed with normal pay) or **On** (junior and senior staff overtime rates). With it on, set the junior staff limit (annual basic up to ¢18,000), the junior rate (5%) up to 50% of monthly basic, and the senior rate (10%). The starting figures follow the GRA overtime rules.
Approved overtime pays	How many times the hourly rate approved overtime pays, and the working hours in a month used for the hourly rate.
A second person must approve each month's pay runs	When ticked, a month's runs cannot be posted until someone other than the person who prepared them approves them (11.7).
Unused annual leave carried over	The most days carried into the next year.
SSNIT Tier 2 share (% of basic salary)	Used for the SSNIT schedule.

Click **Save**.

Ledger accounts. Choose the accounts payroll posts to: Salaries and Wages, PAYE Payable, Other Payroll Deductions, Net Salaries Payable, Employer Pension Contributions, Employer Contributions Payable and Staff Loans Receivable. Click **Save accounts**.

Earnings and deductions. The list holds SSF (5.5% of basic), RSF (Tier 3, 5% of basic), the Employer SSNIT contribution (13% of basic) and any others you add. Click **+ New** to add one:

Name and **Type:** Deduction (taken off pay), Earning / allowance (added to pay), or Employer contribution (a cost to the business, not deducted).

How it is worked out: a **Percentage** of **Basic salary** or of **Gross pay** (total earnings), or a **Fixed amount each month**.

Ledger account (credited), or tick **Create a separate ledger account** (recommended: its balance is what is still to be paid over). An employer contribution also has an **Expense account (debited)**.

Reduces taxable income for a pre-tax deduction like SSF and RSF; untick if it is taken after tax.

Apply to all employees by default (you can still switch it off or change it for one person).

Tier 3 pension, to include it on the trustee schedule.

Active.

Unions. Union dues are set on each employee (a fixed amount or a percentage of basic). Each union's dues are credited to its own account so you can see what is owed to each. Add a union here, or it is added automatically when you name one on an employee.

Bank payment file. Tick the columns your bank's bulk-payment upload needs and number them in order: employee name, bank name and branch, sort code, account number, amount, narration, employee ID, pay run number, period, payment date, SSNIT number, Ghana Card number, TIN, phone, email, department, job title, branch, amount in pesewas, serial number and up to three fixed texts. Type a heading for each column if your bank wants its own, the **Narration** ({month} and {year} are filled in) and whether the **First row has column names**. Click **Save layout**.

Payment details on payslip. Choose what the payslip shows about how each salary was paid (section 11.8):

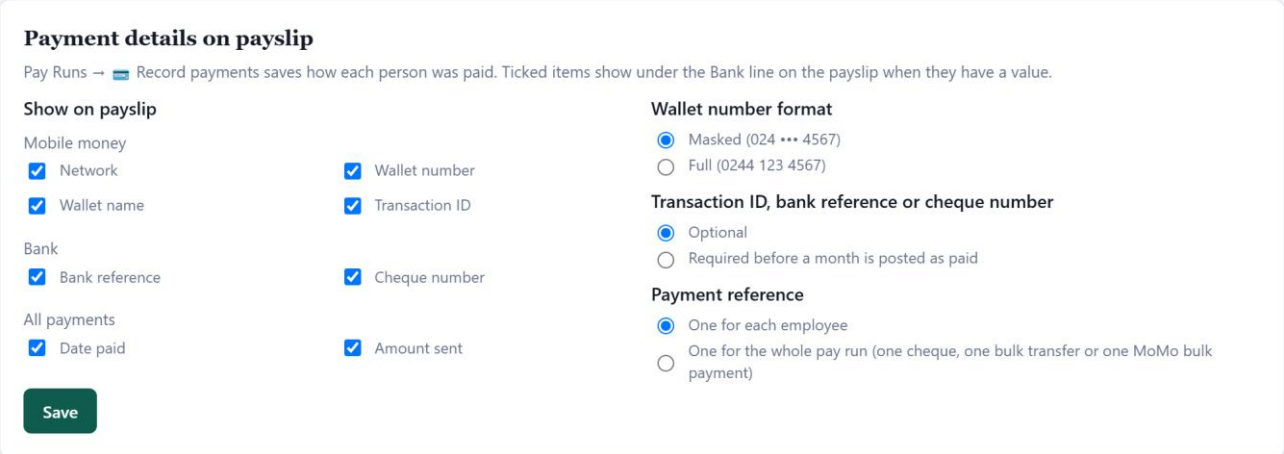

Show on payslip: tick each detail. For Mobile money: Network, Wallet number, Wallet name and Transaction ID. For Bank: Bank reference and Cheque number. For all payments: Date paid and Amount sent. A detail shows only when it is ticked and has a value.

Wallet number format: Masked (024 ••• 4567) or Full.

Transaction ID, bank reference or cheque number: Optional, or Required before a month is posted as paid. When it is required, posting the month with Salaries paid from an account is refused until every run has its number, and the window names the people still missing one. Not paid yet still posts.

Payment reference: One for each employee, or One for the whole pay run (one cheque with a salary schedule, one bulk transfer or one MoMo bulk payment).

Click **Save**.

Payment details on payslip

Public holidays. Holidays are skipped when working days of leave are counted. Choose the year and click **Add Ghana's usual holidays for that year**, then add movable holidays (Eid) and any day moved by the government by hand. Check the list against the official gazette each year.

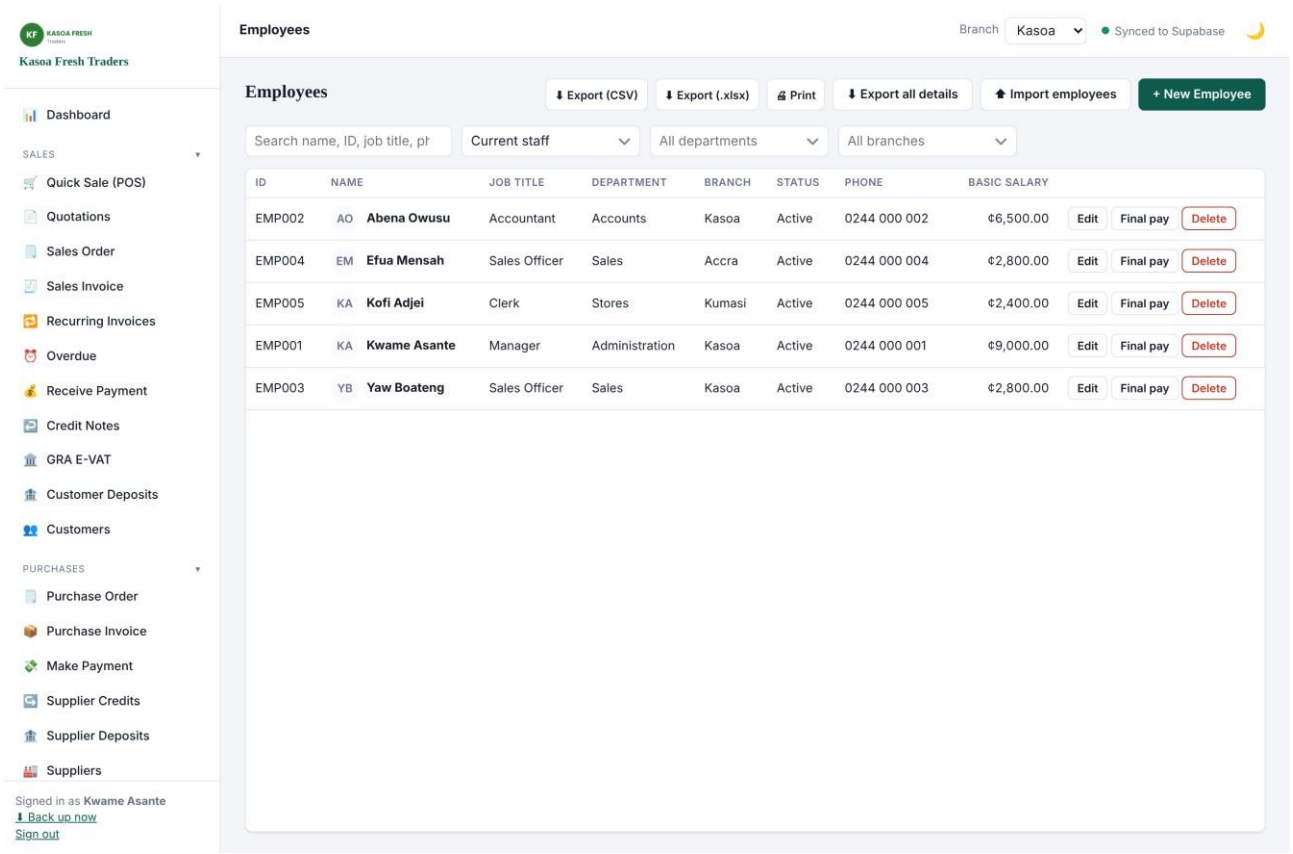

Lists. Keep the **Job titles**, **Departments** (the staff departments people work under, each with a **Head of department** who approves that department's leave and requests; HR approves for everyone) and **Levels** (with the annual leave days for each level).

Branches come from the company. Payroll no longer has its own branch list. The employee form and the Employees filter use the branches in Admin > Company Information > Branches and business units (section 3.2), and Payroll Setup shows that list with a link to it. Renaming a branch there changes it on every employee. Branches still on employees from the old payroll list are shown in Branches and business units with an **Add them here** button.

Backups of payroll data. Export all employee details (Excel), **Export payroll data** and **Import 2A Payroll backup** are at the top of the page.

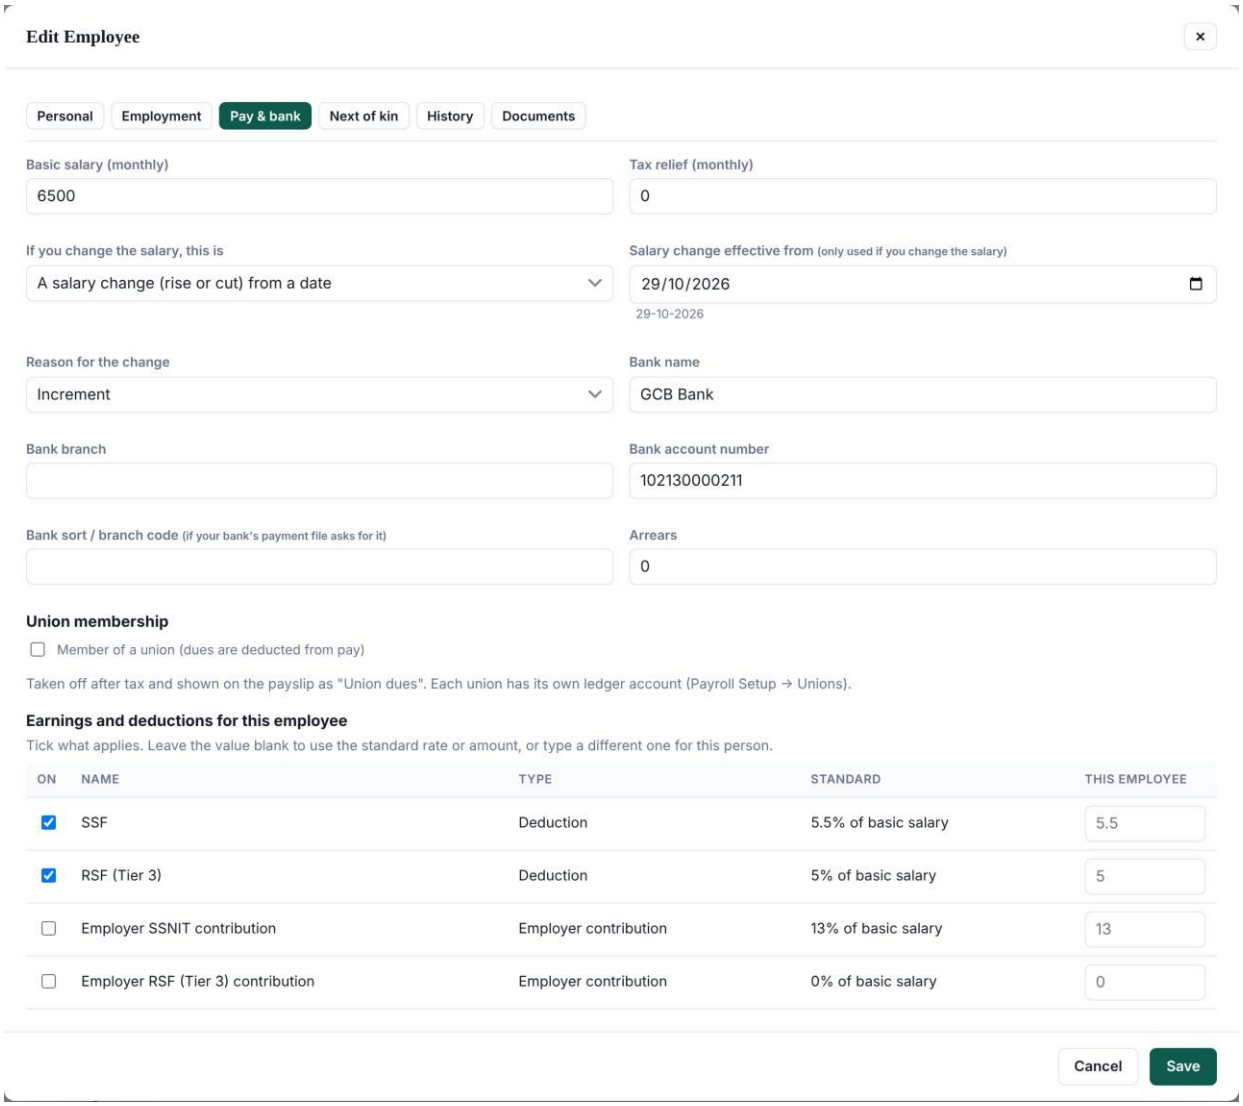

11.4 Employees

Open **HR / Employees > Employees**.

Employees

The list shows each employee's ID, name, job title, department, branch, status, phone and basic salary, with **Edit**, **Final pay** and **Delete**. Filter by status (Current staff, Everyone, Active, Suspended, Resigned, Terminated, Retired), department and branch. **Export all details** downloads every field of every employee to Excel; **Import employees** reads a CSV or Excel file (only Name and Basic salary are needed for a new employee; someone already on file is matched by Employee ID, Ghana Card or email and updated; **Download template** gives the columns).
Click **+ New Employee**. The form has six tabs.

Employee: Pay & bank

Tab	Fields
Personal	Photo, **Employee ID** (suggested, and you can change it), full name, gender, date of birth, phone, **email** (it also links their login to My Payslips), **TIN** (for the PAYE return), Ghana Card number, SSNIT number, residential address.
Employment	Job title, department (the staff department), level (sets the annual leave days), branch (from the company's branches), date joined, annual leave days for this person only, **contract type** (sets the GRA staff category: Permanent, Fixed-term, Probation, Casual, Temporary, Part-time, Contractor, Intern), contract start and end (you are reminded on the dashboard), probation end, **status** with its date and reason, date left, **Casual worker** (flat 15% PAYE on all pay), and **PAYE**: Deduct PAYE or **Don't deduct PAYE (exempt)**.
Pay & bank	Basic salary (monthly), tax relief (monthly), bank name, branch, account number and sort code, arrears, union membership and dues, and the **earnings and deductions** that apply to this person, with their own value if different.
Next of kin	Name, relationship, address and emergency contact.
History	The salary history and status history.
Documents	Contracts, appointment letters, ID copies, certificates and so on (PDF, Word or pictures up to 1.5 MB each), each with an optional expiry date.

Salary charged to (business unit). When the company has business units (section 3.2), the employee form has **Salary charged to (business unit)**: where this person's salary and employer contributions are charged in the accounts when the pay run is posted. Charge production staff to their business unit (for example D02 Digital Printing) and office staff to the shared unit. This does not change their staff Department.

Salary paid by. On the **Pay & bank** tab choose how this person is paid: **Bank transfer**, **Mobile money** or **Cheque**. For Mobile money choose the **Network** (MTN MoMo, Telecel Cash or AT Money) and type the **Wallet number** and **Wallet name** (leave the name empty to use the employee's name). An employee whose bank name says Mobile Money is treated as Mobile Money, with the account number as the wallet, so older records work without editing.

Changing a salary. When you change the basic salary, choose what it is:

A salary change (rise or cut) from a date: enter the date it takes effect and the **Reason** (Increment, Promotion, Correction, Cost of living, Other). It applies from the pay month that contains that date and is kept in the salary history.

Correcting a mistake (the salary was entered wrongly): the wrong figure is replaced, with no new history line.

Staff who resign, are terminated or retire stay on record and in reports, but no longer appear in new pay runs after their last day.

Final pay. Click **Final pay** on the list. Enter the **Last working day**, the **Reason** (Resigned, Terminated, Retired), the **Unused leave days to pay out** (the days earned and taken so far are shown), **Notice pay in lieu**, and any **Other final payment** such as severance or gratuity (**Work out gratuity** helps with the figure). Click **Create final pay run**: the employee is marked as left, the last month's pay is cut to the days worked, and the extra lines are added to that month's run, which opens for you to check.

11.5 HR: dashboard, records, leave, attendance, loans and requests

HR Dashboard: headcount, joiners, leavers and turnover for the year; staff by department, level and gender; leavers by department; what needs attention; and documents expiring in the next 60 days. **Print headcount report** prints it.

Staff Records: for each employee, **Notes and warnings** (Commendation, Verbal warning, Written warning, Training, Meeting, Promotion / role change, Other), **Appraisals** (ratings from 1 to 5 for quality of work, productivity, punctuality, teamwork, initiative, communication and customer service, with strengths, areas to improve, goals and the employee's comment), **Letters and certificates** to print, and the **Exit checklist**.

Leave: + Record Leave with the employee, type (Annual, Sick, Unpaid, Maternity / Paternity, Study, Other), dates and note; the working days (Monday to Friday, without public holidays) are counted for you. Switch the view between **Leave records**, **Leave balances** and **Leave requests**. Unpaid leave is taken off pay automatically when the month's pay run is created.

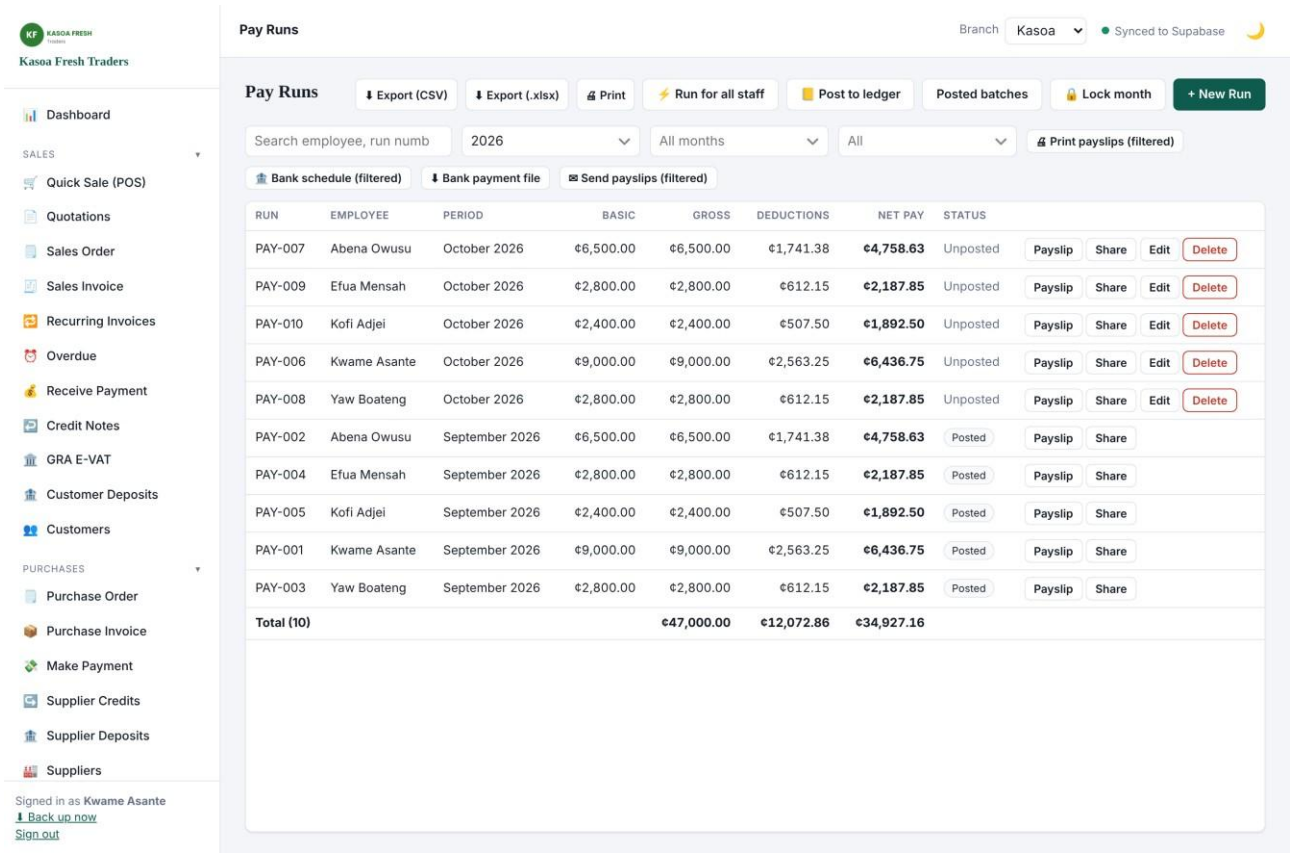

Attendance: for the month, type each person's unpaid days absent, times late and minutes late, click **Save**, then **Apply absences to pay runs** to add the absences to that month's unposted runs.

Staff Loans: + New Loan with the employee, description, loan amount, monthly repayment, date given, first repayment month and **Paid out from** (choose an account to record the loan itself in the ledger, or "Don't record in the ledger" if it is already recorded). Each pay run deducts the repayment after tax until the balance is zero.

Staff Requests: loan and advance requests, leave requests, overtime requests and changes to personal details that staff send from My Payslips. The head of the employee's department or HR decides them; a head's own requests go to HR, and changes to personal details are decided by HR.

11.6 Pay runs

Open **Payroll > Pay Runs**.

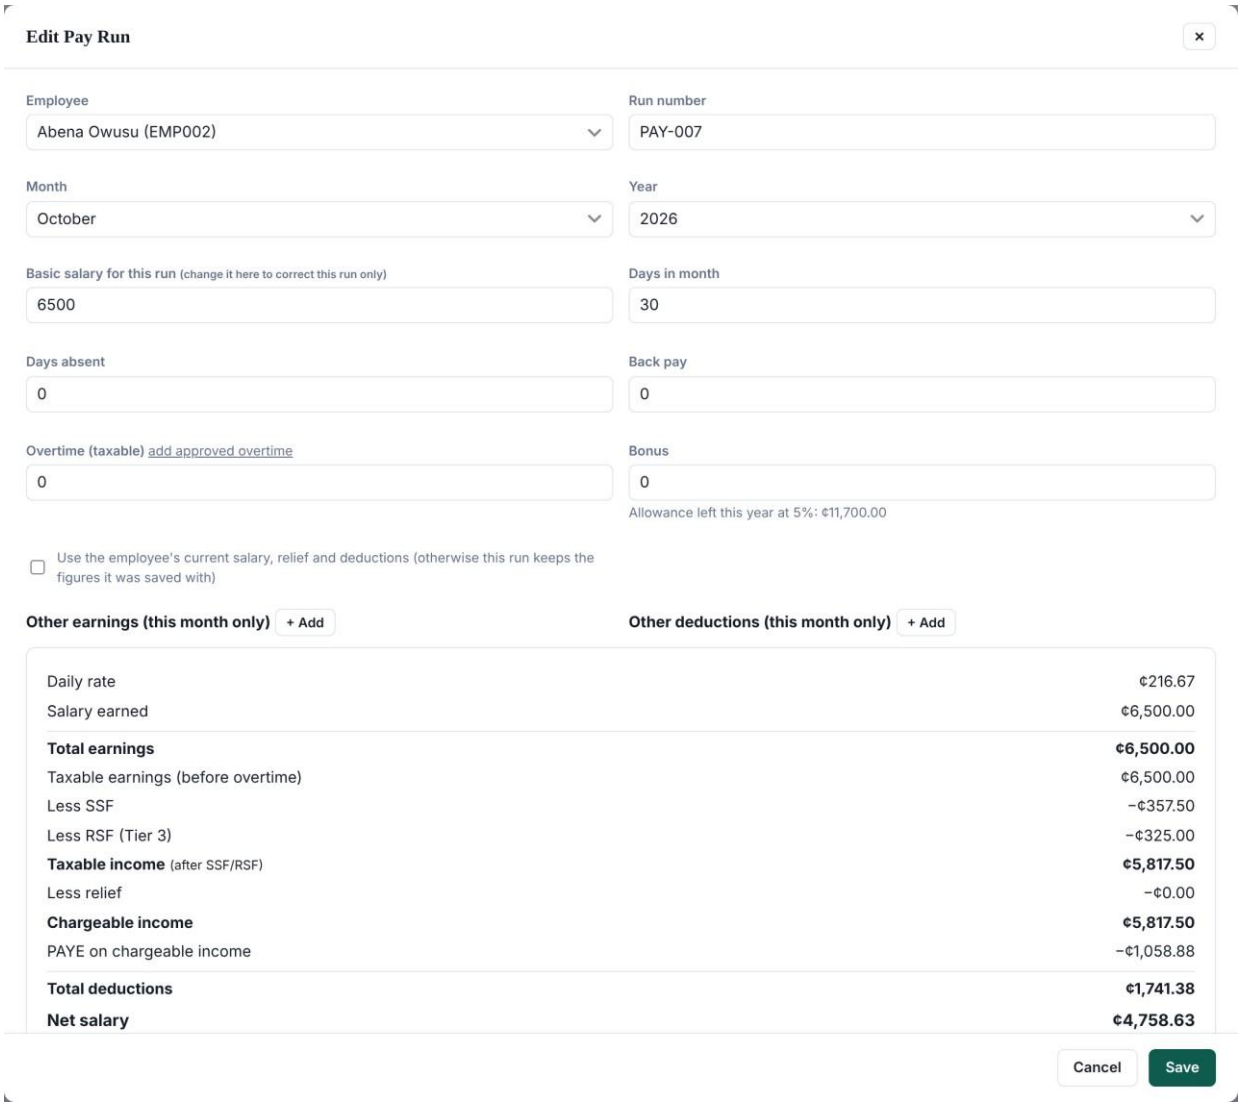

Pay Runs

For everyone at once. Click **Run for all staff**, choose the **Month** and **Year** and click **Create runs**. One run is made for every employee who does not already have one for that month, using their current salary, relief and deductions.

One run. Click **+ New Run** (or **Edit** on a run) to see or change:

the **Basic salary for this run** (change it here to correct this run only), **Days in month** and **Days absent**;

Back pay, **Overtime** (with **add approved overtime**), **Bonus** (the allowance left this year at 5% is shown), and **Other earnings** and **Other deductions** for this month only; on an existing run, **Use the employee's current salary, relief and deductions** to refresh it.

A pay run

The right side works it out line by line: daily rate, salary earned, total earnings, taxable earnings, less SSF, RSF and other pre-tax deductions, **taxable income** (after SSF and RSF), less relief, **chargeable income**, **PAYE on chargeable income**, total deductions and **net salary**. **Save & next employee** moves to the next person.

Payslips and sending. Payslip on a run prints it; **Share** sends it. **Print payslips (filtered)**, **Bank schedule (filtered)** and **Send payslips (filtered)** work on the runs shown by the Year, Month and Status filters. Send payslips opens WhatsApp or email for each person with their message ready; tap Send in each one.

Bank payment file. Click **Bank payment file**, choose the month, year, bank (or all banks), payment date and **File type** (CSV or Excel), and click **Download file**. The columns follow the layout in Payroll Setup.

11.7 Approving, posting and locking

Approval. If a second approval is switched on (11.3), click **✓ Approve** on the Pay Runs screen and approve the month. Someone who prepared any of the month's runs cannot approve them.

Posting. Click **Post to ledger**, choose the **Period**, the **Posting date** and **Salaries paid from** (an account, or "Not paid yet (keep as Net Salaries Payable)"). The window shows the debits and credits before you click **Post**: Dr Salaries and Wages (gross) / Cr PAYE Payable, SSF Payable, RSF Payable, each other deduction's account and Net Salaries Payable. If you chose an account, it also records the payment of net pay. If Payroll Setup makes the reference

required, the window warns you first, and posting with an account is refused until every run has its transaction ID, bank reference or cheque number.

Posted batches lists each posted month with its transaction number; **Unpost** takes a month back off the ledger so it can be changed.

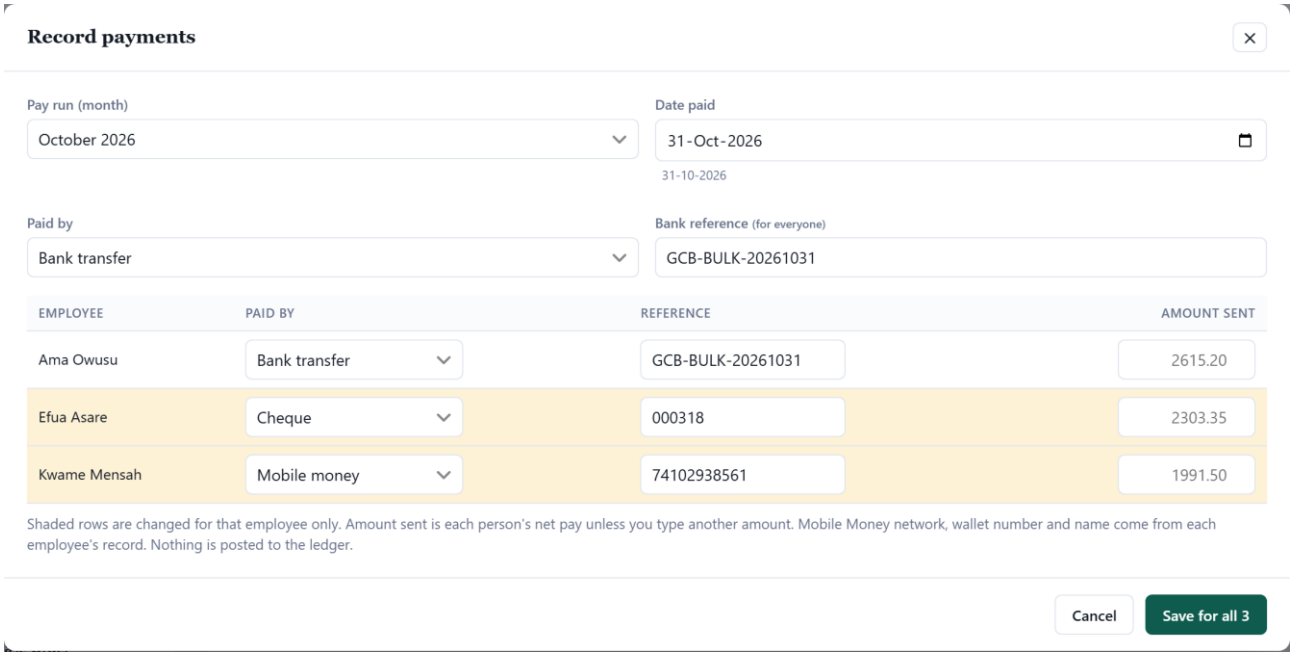

Locking. **Lock month** locks a fully posted month: it cannot then be edited, deleted, re-posted or unposted. Only an administrator can unlock.

11.8 Paying staff and remitting

Recording how each salary was paid. This saves how and when each person was paid so the payslip can show it. It does not post anything to the ledger, so it also works on posted and locked runs.

For the whole month: on **Payroll > Pay Runs** click **Record payments** and choose the **Pay run (month)** and **Date paid**. Each employee is listed with **Paid by**, **Reference** and **Amount sent** (each person's net pay unless you type another amount).

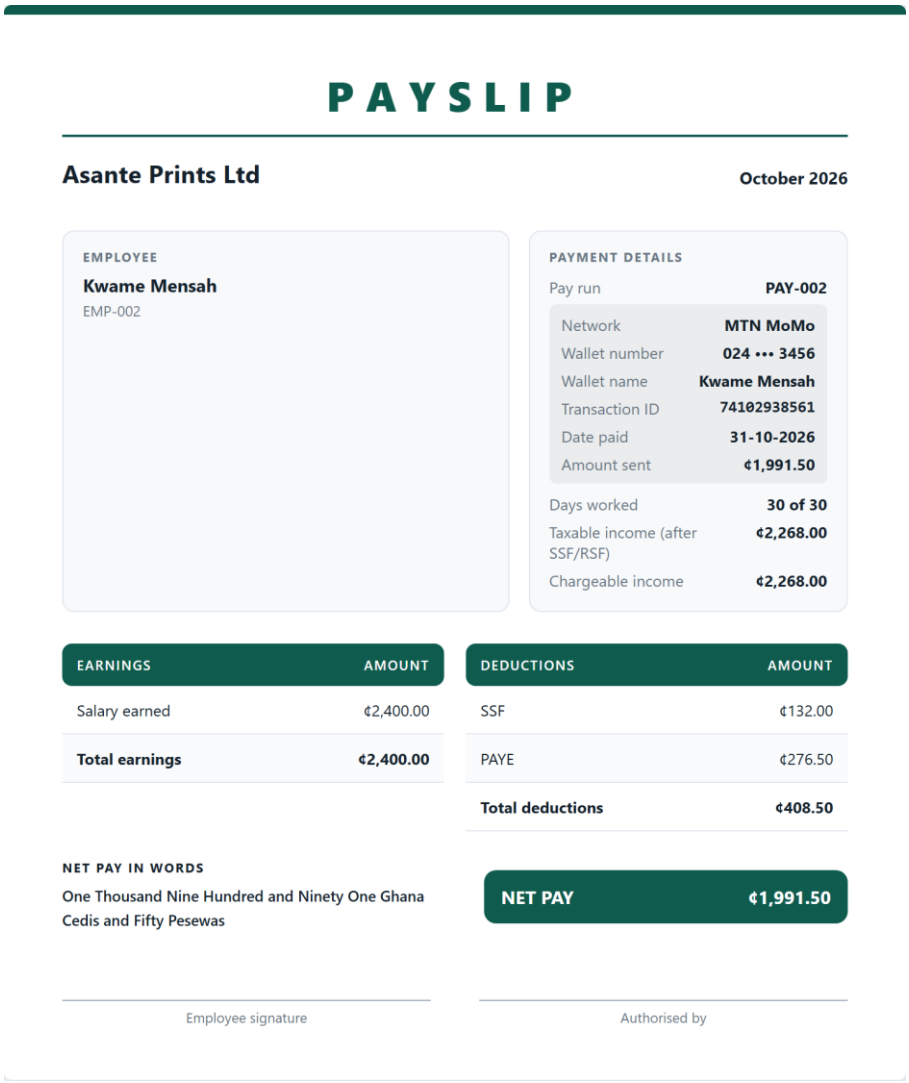

One number for everyone: when Payroll Setup uses one reference for the whole pay run, choose **Paid by** and type the cheque number, bank reference or transaction ID once at the top; it is copied to every employee. You can still change one person, for example someone paid by Mobile Money with their own transaction ID; changed rows are shaded. Click **Save for all**.

Record payments

For one person: click **Payment** on their row in the Pay Runs list. The network, wallet number and wallet name fill in from the employee record. Enter the transaction ID (Mobile Money), bank reference (bank transfer) or cheque number, and check the date paid and the amount sent.

The reference shows under the status in the Pay Runs list, and on the payslip in a shaded block under the Bank line:

PAYSLIP

Asante Prints Ltd — October 2026

Employee signature

Authorised by

A payslip with the payment details

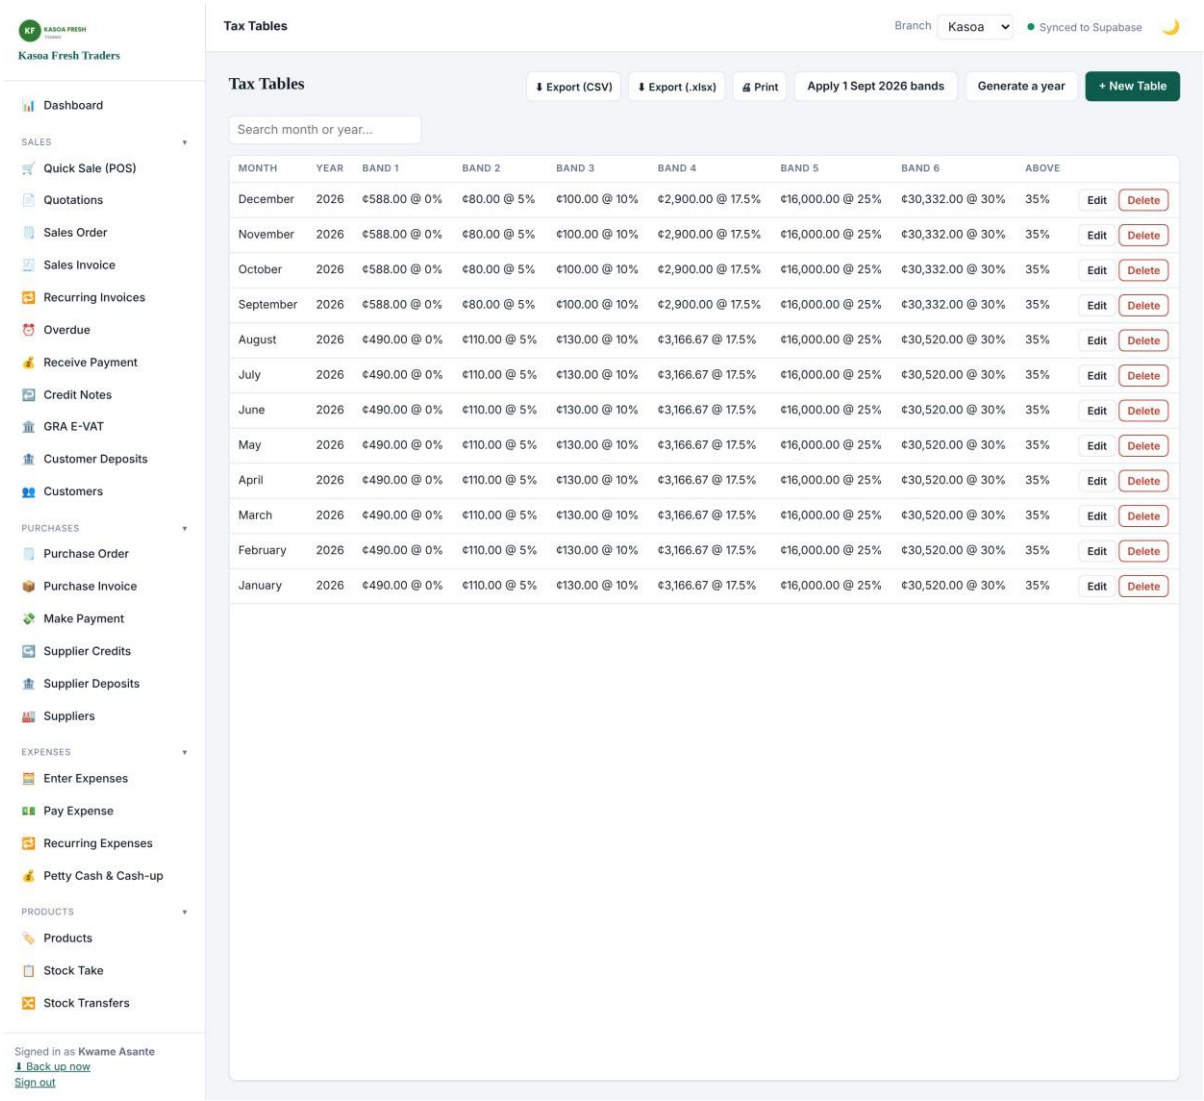

Paying staff and remitting.

If you posted with "Not paid yet", pay the net salaries later with a journal: Dr Net Salaries Payable, Cr the bank.

Pay PAYE to GRA and SSF to SSNIT (and Tier 2 / Tier 3 to the trustees) by their due dates, and record each payment with a journal: Dr PAYE Payable (or SSF Payable, RSF Payable), Cr the bank.

11.9 Tax tables and payroll reports

Tax Tables hold the monthly PAYE bands. **Generate a year** makes the months that have no table yet, copying the latest table (or the standard Ghana bands). **+ New Table** starts from the previous table so you change only what GRA changed. When new GRA bands take effect, the program offers a button such as **Apply 1 Sept 2026 bands** to update the months that are not yet posted or locked.

Tax Tables

Payroll Reports: choose the month and the report: **Payroll register**, **GRA monthly PAYE schedule (upload layout)**, **PAYE summary**, **SSNIT contribution schedule (Tier 1 & 2)**, **Tier 2 & Tier 3 pension schedule (for the trustees)**, **Deductions schedule**, **Payroll cost by department** and **Annual summary per employee**. Each can be exported or printed. "Taxable income" on the register, the annual summary, the annual pay statement, the pay run form and the payslip is pay **after** SSF, RSF and other pre-tax deductions: the figure PAYE is worked out from. The payslip shows **Less relief** when there is relief, so its lines add up to the chargeable income.

Payroll Dashboard: for the month, the number of employees and runs, gross pay, net pay, PAYE, SSF, RSF and other deductions, average net pay, employer contributions, total cost to the business, and net pay by department and by branch.

11.10 My Payslips (staff self-service)

A staff member whose employee record has the same email as their login sees **My Payslips**: their payslips, their annual leave left, and buttons to request leave, a loan or advance, or overtime, and to send changes to their personal details. An administrator sees every employee's payslips here, including runs not yet posted.

12. NGO / Non Profit mode

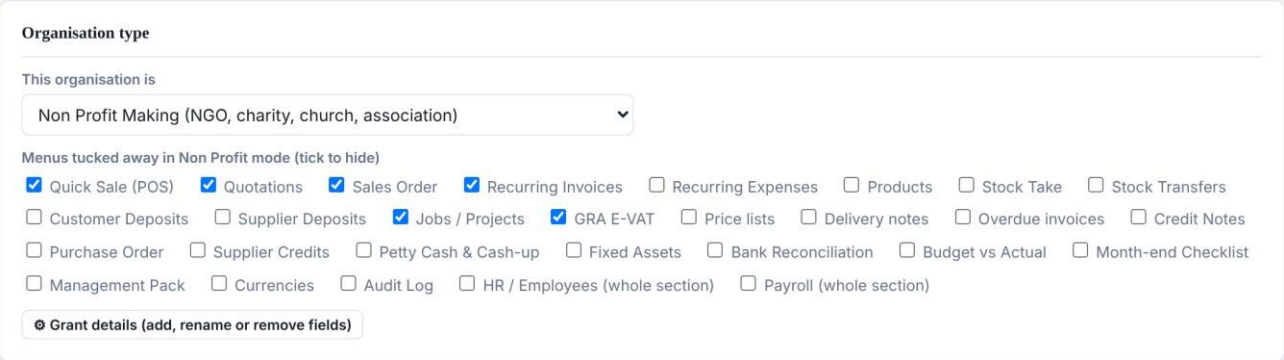

Non Profit mode is for NGOs, churches, associations and foundations. It keeps the same accounting engine but adds funds, grants, donor reporting and non-profit statements. The screenshots in this chapter come from a sample organisation, Hope Community Foundation.

12.1 Choosing the mode

After the first sign-in the program asks **What kind of organisation is this?** (section 3.1). Choose **Non Profit**. With a new company it also asks which account codes to use; the numbered chart offers ready-made **NGO** and **Church** packs (section 3.7). For the **Kind of business**, choose **NGO / charity** or **Church**: the business type switches off the modules a non-profit rarely uses and puts the **Funds and grants** card on the Dashboard, with restricted funds, grant balances and alerts (sections 2.6 and 3.9).

The choice is saved in **Admin / Settings > Company Information > Organisation type**, and you can change it later; nothing is deleted. Non Profit mode adds the **Funds & Grants** group at the top of the menu (Grants, Funds, Compliance), non-profit wording (Income and Expenditure, Donors) and the non-profit reports.

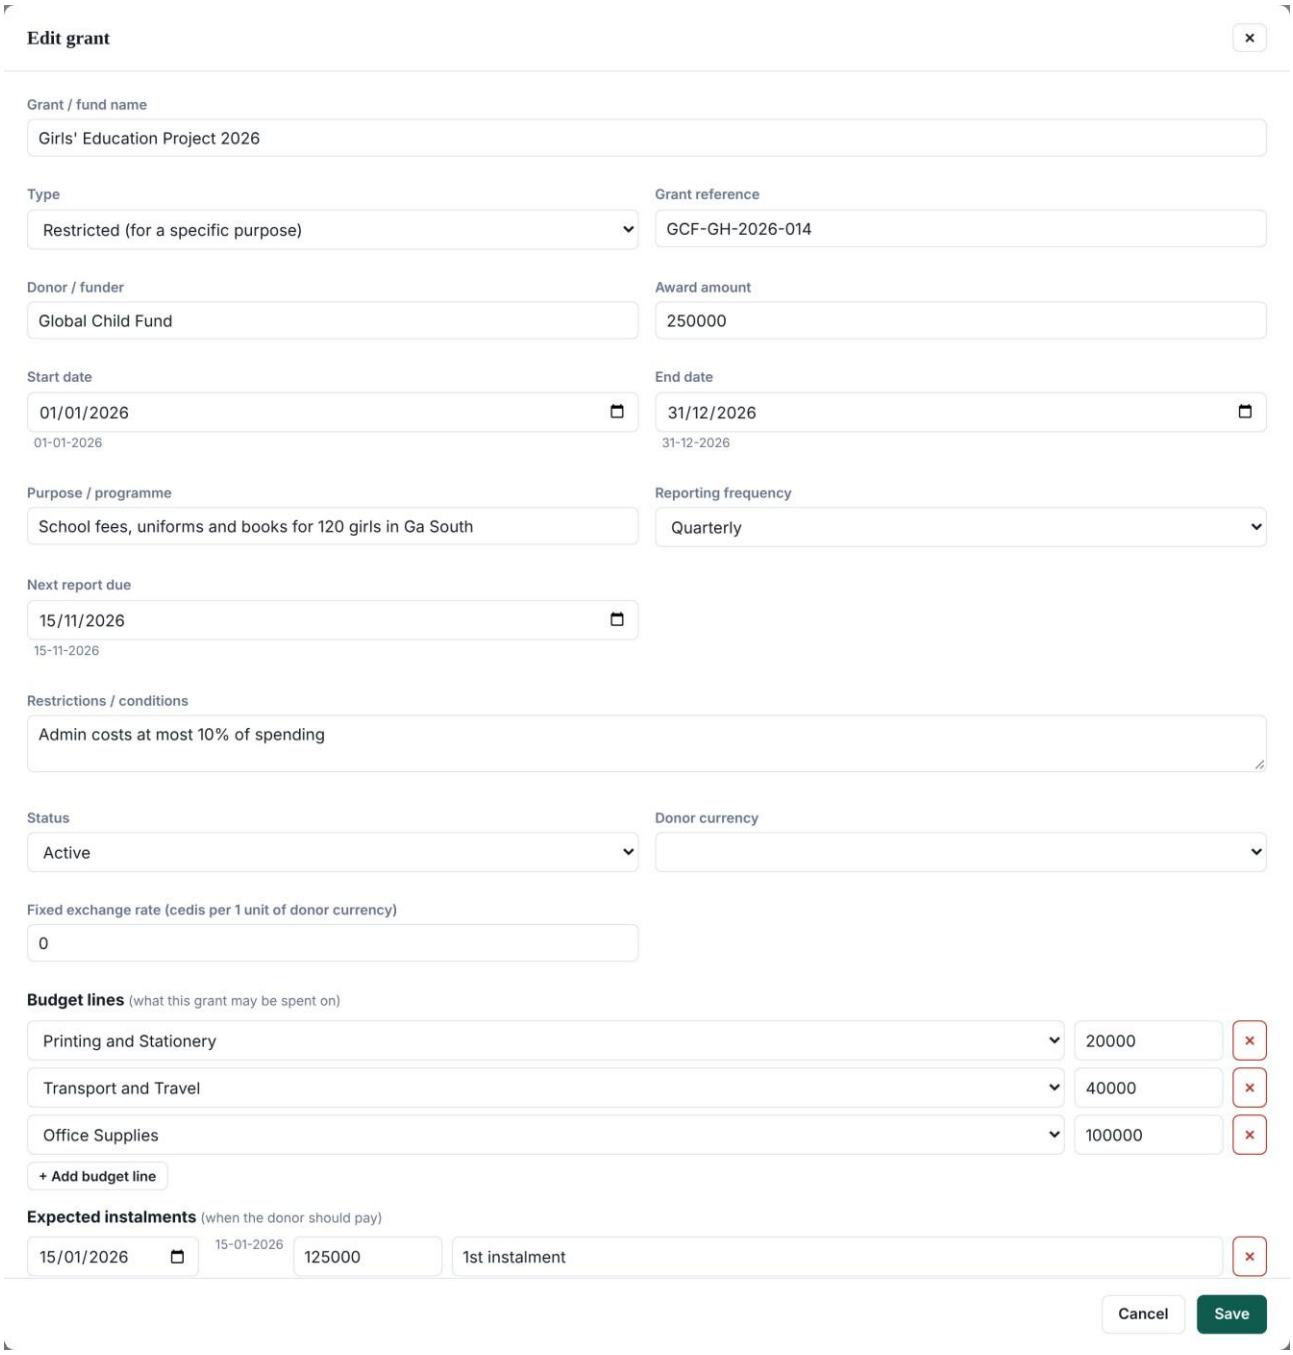

Hiding menus you do not use. In Company Information, a Non Profit can hide: Quick Sale (POS), Quotations, Sales Order, Recurring Invoices, Recurring Expenses, Products, Stock Take, Stock Transfers, Customer Deposits, Supplier Deposits, Jobs / Projects, GRA E-VAT, Price lists, Delivery notes, Overdue invoices, Credit Notes, Purchase Order, Supplier Credits, Petty Cash & Cash-up, Fixed Assets, Bank Reconciliation, Budget vs Actual, Month-end Checklist, Management Pack, Currencies, Audit Log, and the whole HR / Employees or Payroll section. Hidden menus come back when you untick them.

Organisation type and hidden menus

12.2 Grants

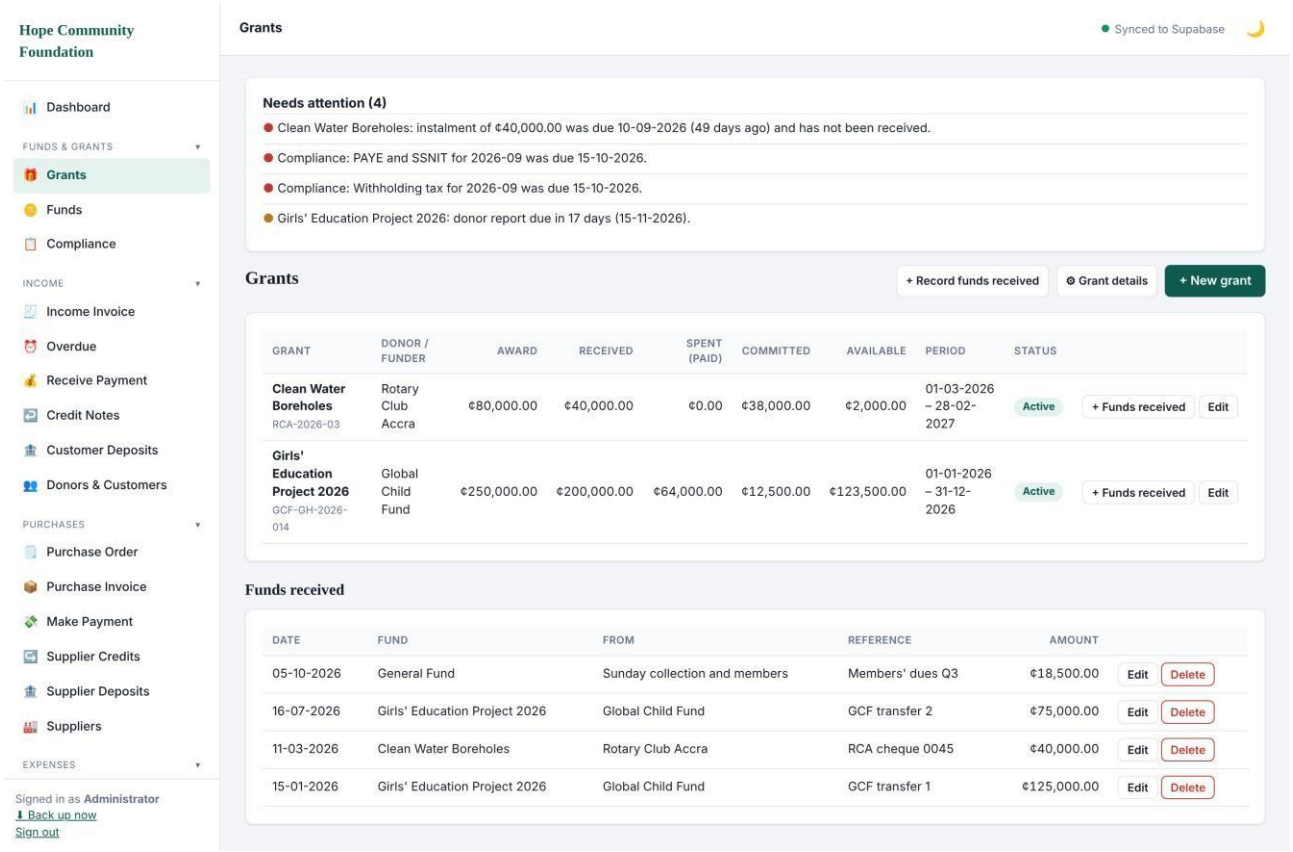

A grant is money given for an agreed purpose. Open **Funds & Grants > Grants** and click **New grant**.

Grant form

1. Enter the grant name, donor, award amount, start and end dates, purpose and reference.
2. If the grant is in another currency, choose it and enter the fixed exchange rate agreed with the donor.
3. Enter the reporting frequency and next report date. The program reminds you when a donor report is due.
4. Add budget lines: pick an expense account and the amount approved for it.
5. Add the expected instalments (tranches) with date and amount.
6. Write any donor conditions, then save.

The grants list shows the award, received, spent (paid), committed, available and status for each grant, with a **Needs attention** panel for upcoming reports, grants about to end and compliance deadlines.

Grants list

Spent (paid) is money that has gone out. **Committed** is bills charged to the grant that are not paid yet. **Available** is received minus spent minus committed. Use **Edit** in the Funds received table to correct a receipt.

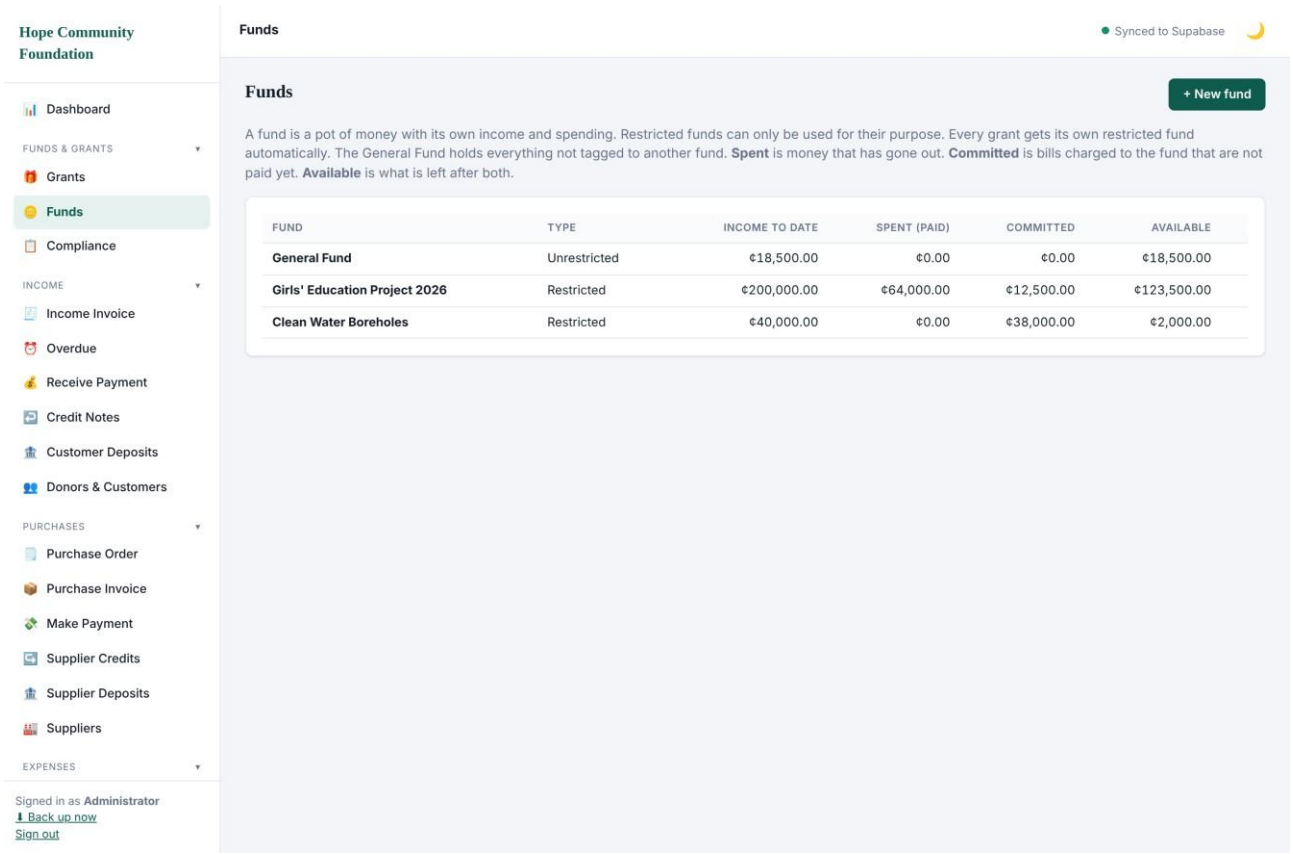

Grant details lets you add, rename or hide the grant fields (donor reference, report frequency and so on) to suit your donors.

12.3 Funds and receiving money

A fund holds money for a purpose. Each grant has its own restricted fund. You can add others with **+ New fund**, such as a Building Fund; the **General Fund** holds unrestricted money.

To record money received, click **Record funds received**, choose the fund, the donor, the date, amount, reference and the bank account, and save. This credits the fund as income.

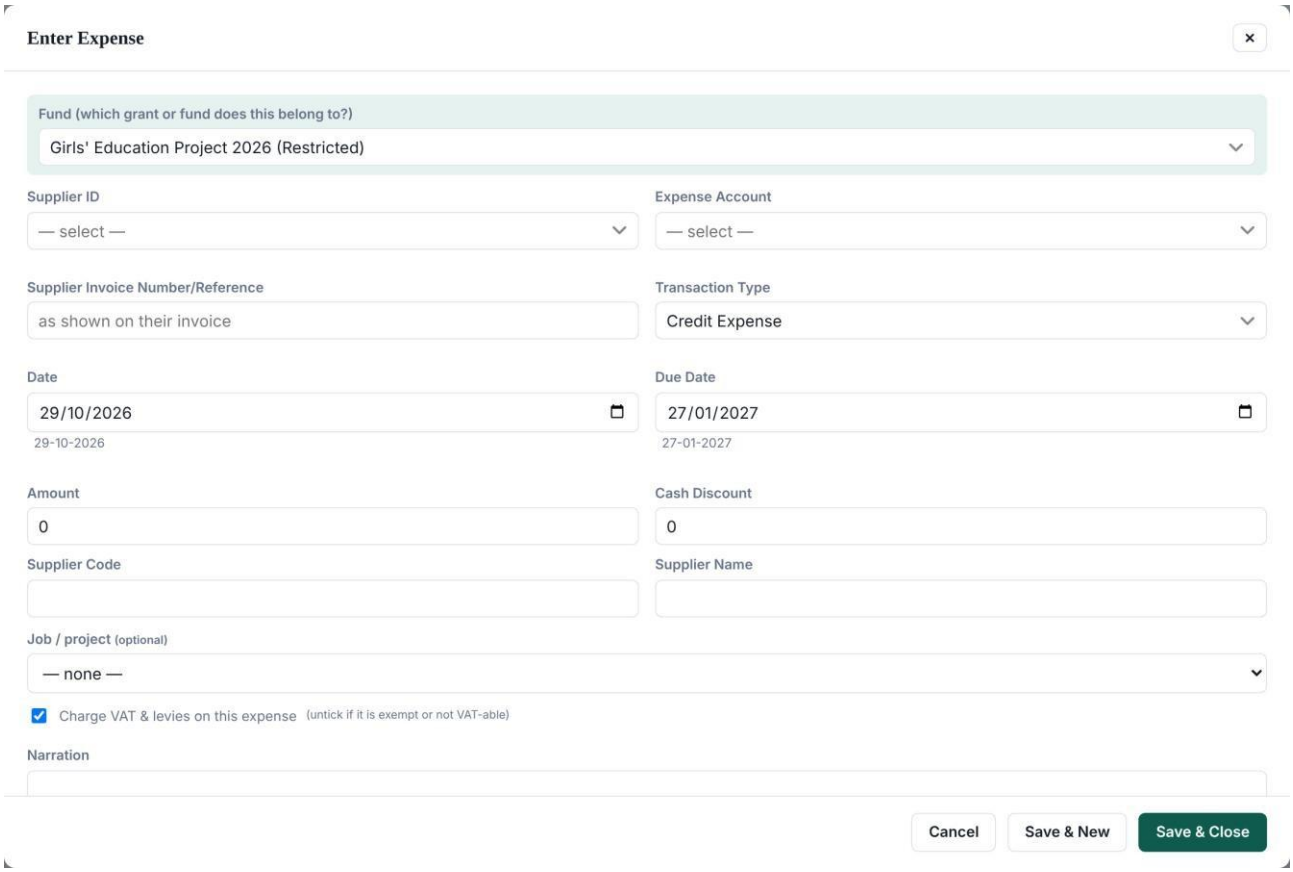

The **Funds** screen shows the same columns for every fund: income, spent (paid), committed and available.

Funds

12.4 Charging costs to a fund

Every transaction form shows a **Fund** box at the top. Choose the grant or fund that pays for the cost; leave it on General Fund for ordinary running costs.

The Fund box on an expense

A credit purchase or credit expense charged to a grant is **Committed**, not Spent, because the money has not gone out. When you pay it, the amount paid moves from Committed to Spent; the payment takes the fund from the original bill.

Cash purchases and cash expenses count as Spent straight away.

If a restricted fund has spent or promised more than it received, a warning appears when you save, and the fund is listed in Needs attention.

Budget lines are tracked against actual spending, so you see what is left on each line.

12.5 Non-profit reports

In Reports, the list changes to:

Statement of Income and Expenditure with Unrestricted, Restricted and Total columns.

Statement of Financial Position with funds shown as Unrestricted and Restricted.

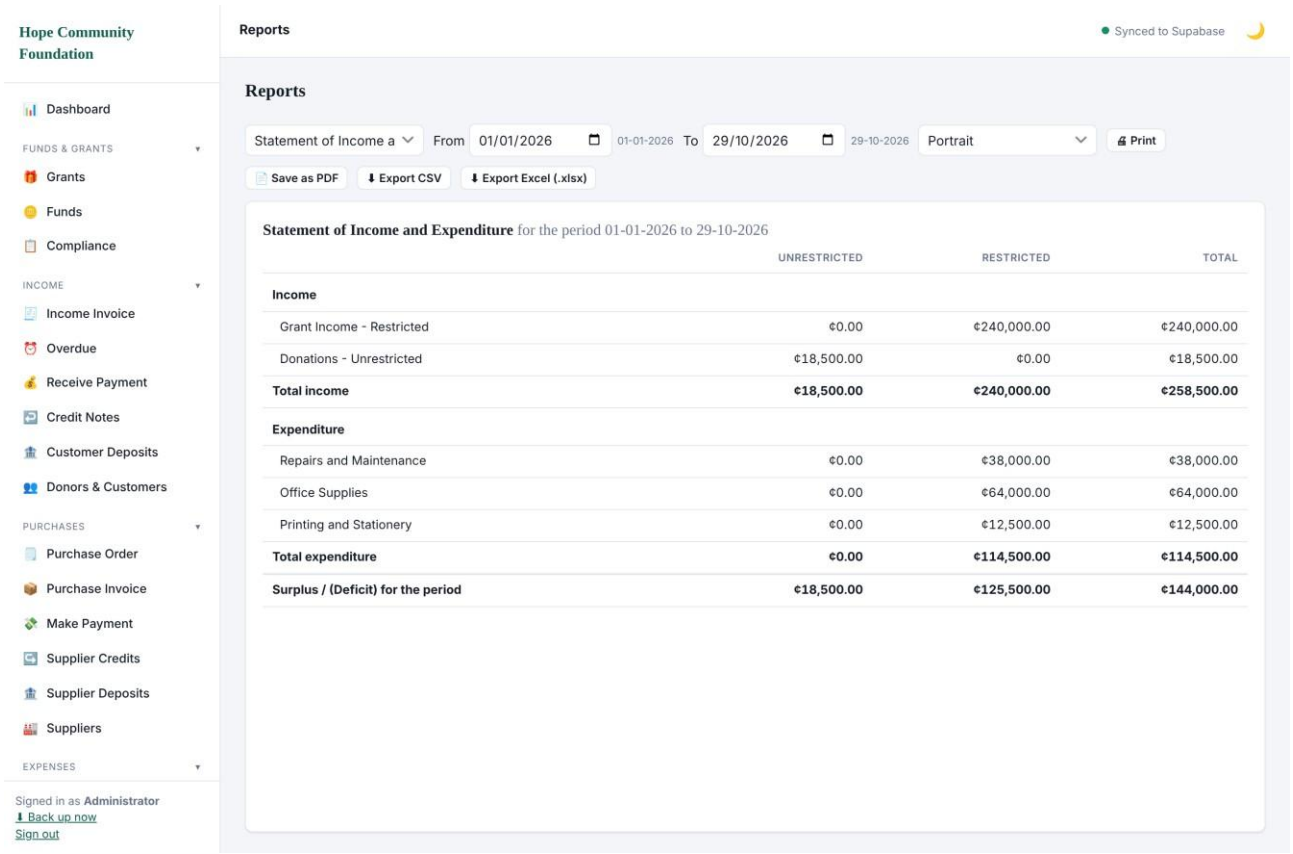

Receipts and Payments Account on a cash basis.

Fund Movement: brought forward, income, spent and carried forward for each fund.

Notes to the Accounts with editable policy wording.

Grant Report and **Donor Report** with budget against actual and the status of each instalment. The Grant Report shows spent (paid), committed, cash balance (received minus spent) and available; for one grant, the budget lines show spent and committed for each line.

Cost Split between programme, administration and fundraising costs.

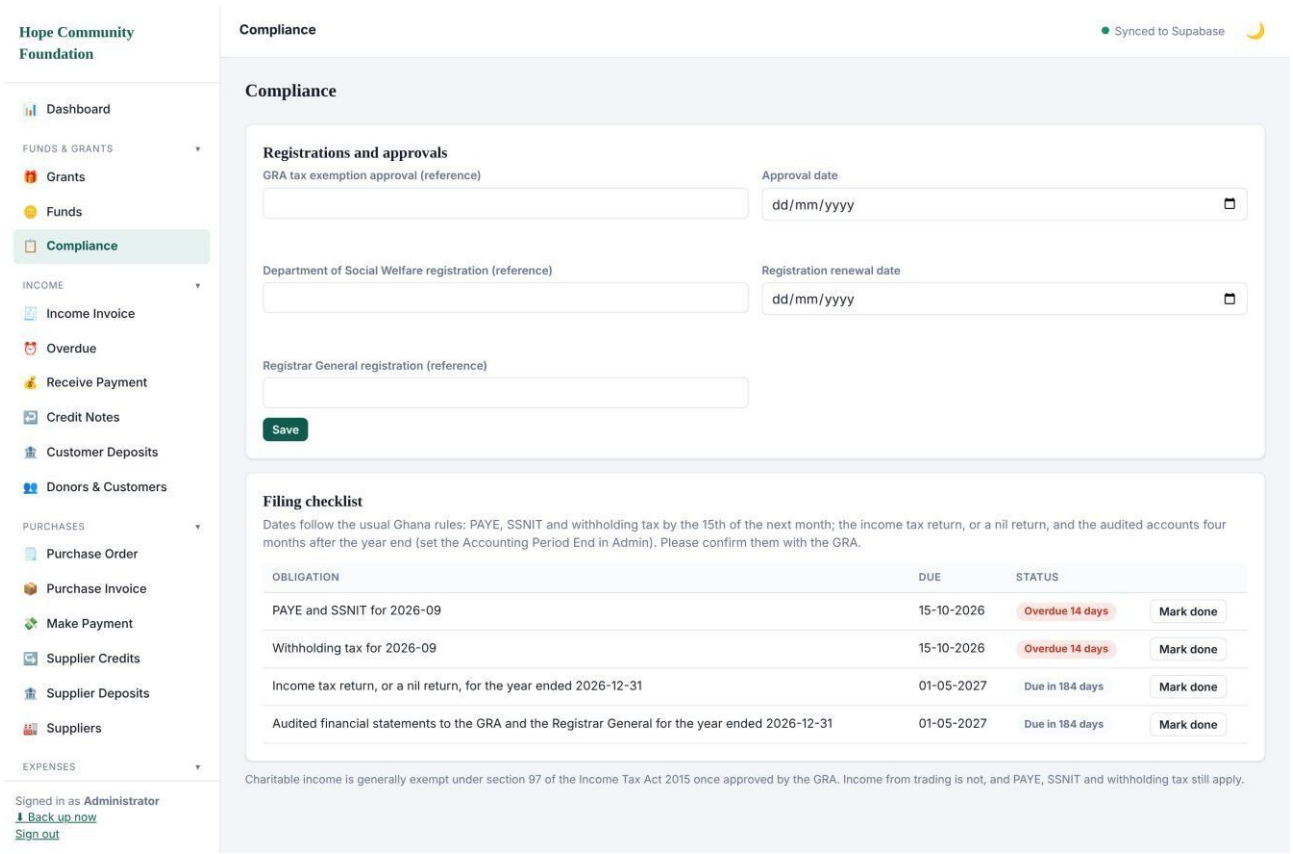

Statement of Income and Expenditure

The financial statements still record a cost when it is incurred, even if it is only committed in the grant figures.

12.6 Compliance checklist

Funds & Grants > Compliance lists recurring obligations such as PAYE, SSNIT and withholding tax, with due dates by month, so nothing is missed. Tick each one when you file it. Check the dates against your own tax advice, because rules change.

Charitable income is generally exempt under section 97 of the Income Tax Act 2015 once approved by the GRA. Income from trading is not, and PAYE, SSNIT and withholding tax still apply.

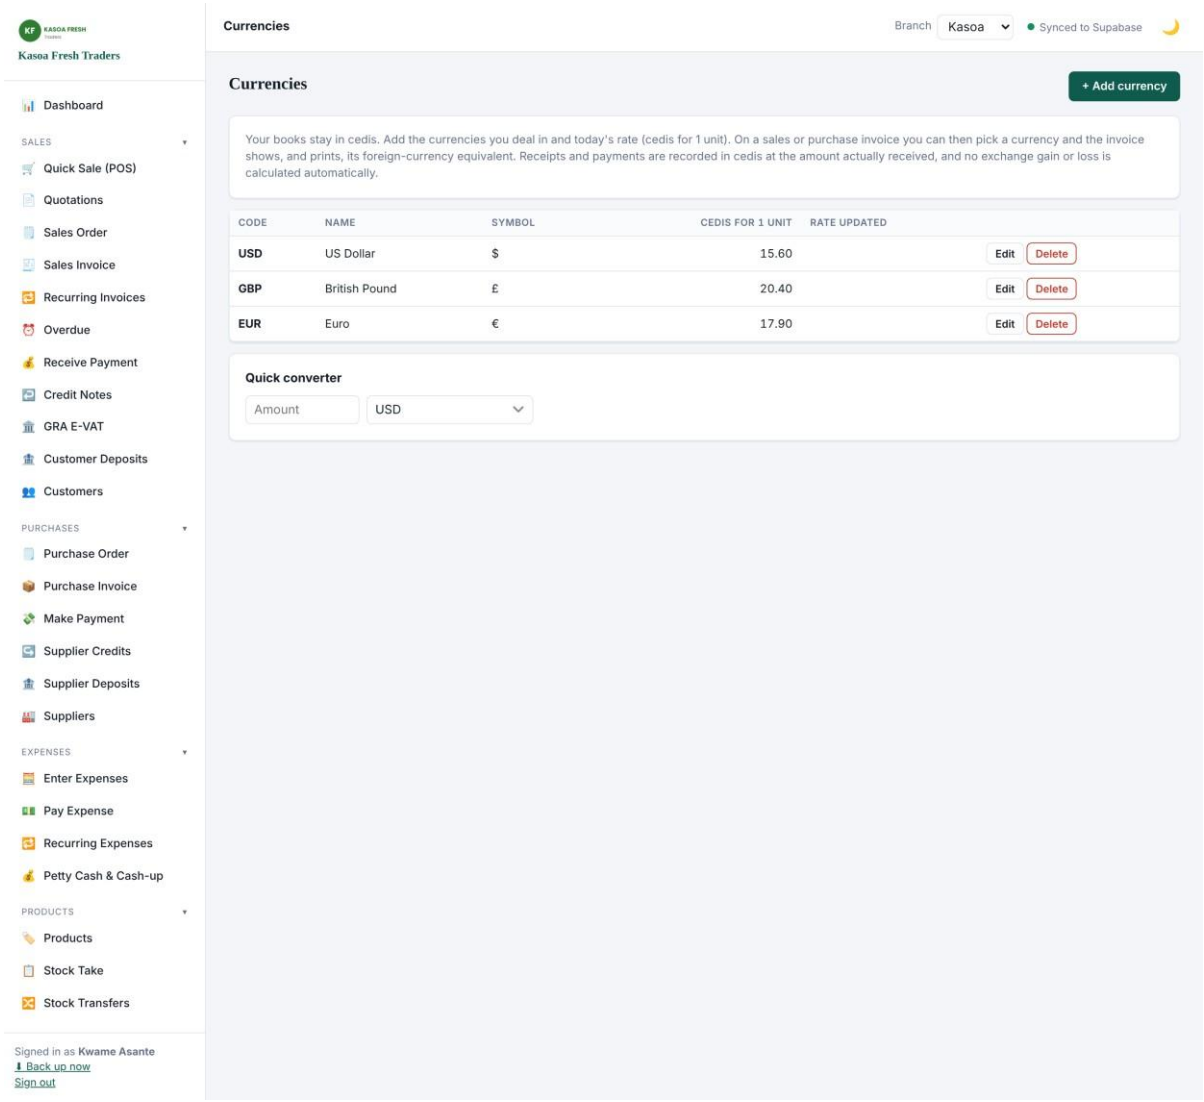

Compliance

13. Currencies, backups, audit log and good habits

These screens are in the **System** group of the menu, with Admin / Settings.

13.1 Foreign currencies

Your books stay in cedis. Open **System > Currencies** and click **+ Add currency** to add the currencies you deal in: the **Code** (for example USD), **Name**, **Symbol** and **Cedis for 1 unit** (today's rate). Update the rate when it changes.

Currencies

On a sales or purchase invoice you can then pick a currency: the invoice shows and prints its foreign-currency equivalent at that rate, and the rate is saved with the invoice. Receipts and payments are recorded in cedis. The **Quick converter** on the Currencies screen converts any amount. Deleting a currency does not change invoices already saved.

13.2 Backups and keeping your data safe

Your books are kept in your online company database and saved as you work, so a broken computer does not lose them. Keep your own copies as well:

Back up now at the bottom of the menu (or in General Settings > App & Backup Folders) saves a full copy of all company data. The dashboard reminds people with the Backups right when no backup has been made on that device for 7 days.

On the desktop app, set the **Backup folder**, a **cloud folder** (Dropbox, OneDrive, Google Drive or iCloud), **Automatic backup at closing time**, how many to **keep**, and a **backup password** (section 3.3).

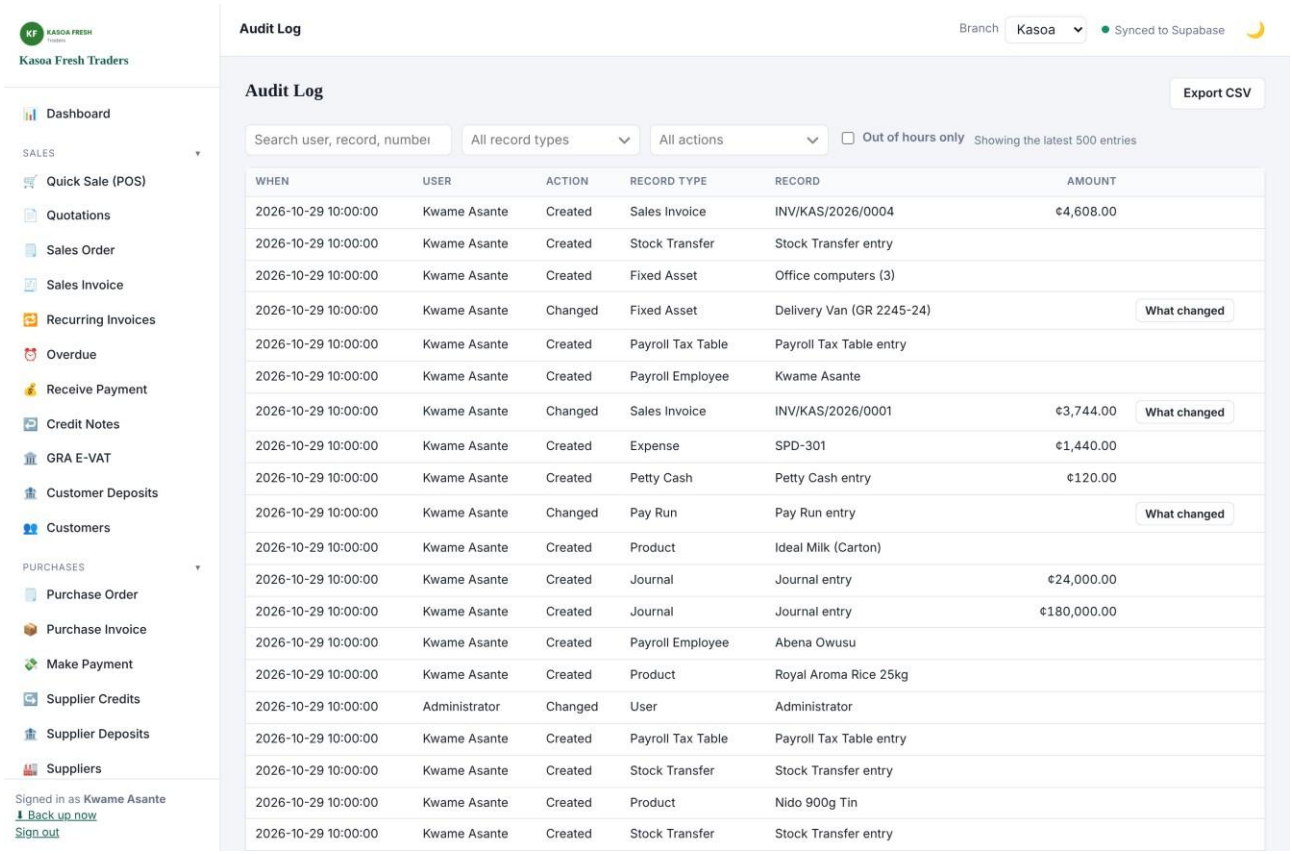

A quiet safety backup is also saved before anything is deleted (at most one every 30 minutes).

Restore From File brings a backup back. It replaces the whole company, so use it only to recover from a serious problem (section 3.3).

At every month end, also export the key reports to PDF or Excel, and keep the installer and your licence keys somewhere safe.

13.3 Audit Log

Open **System > Audit Log**.

Audit Log

It lists the latest 500 actions: **When**, **User**, **Action** (Created, Changed or Deleted), **Record type**, **Record** and **Amount**. Record types and records are shown by their names, for example Petty Cash, Stock Transfer, Customer Deposit, Job or Payroll Tax Table, and TRF-0003 or "Tax table March 2026". An older entry that only saved an id shows as, for example, "Petty Cash entry", with the id in the tooltip. The **Record type** filter lists these types too. For a change, **What changed** shows the old and new values. Tick **Out of hours only** to see records saved outside your working hours (section 3.3). **Export CSV** saves the list as a file.

Because each person signs in as themselves (chapter 4), the Audit Log shows who did what. Review it every month, and whenever figures look wrong.

13.4 Good habits

Record transactions the same day.

Never delete a posted document: void it, or use a credit note or a reversing journal.

Reconcile every bank and Mobile Money account every month.

Clear every invoice on GRA E-VAT at the time of sale.

Work through the month-end checklist, then close the month (section 9.6).

Give every person their own sign-in and never share passwords.

Review users, roles and branch ticks every quarter, and when staff change.

Check the Trial Balance and the stock check before filing any return.

Make a backup at least once a day.

14. Troubleshooting and support

Problem	What to do
Cannot sign in	Check the email and password and the internet. Use **Forgot password?**. Without internet you can sign in only on a device where the offline copy was kept when you signed out (section 2.5).
The screen says a subscription is needed	The trial or licence has ended. Click **Enter licence key** or open Registration (section 4.7), or contact us.
A licence key is refused	Copy it again with no spaces, check the internet, and contact us with a screenshot.
"Period is closed" when saving	The date is on or before the closing date. Use a later date, or ask an administrator to reopen the period (section 3.4).
A menu item or a button is missing	Your role does not have that right, or has View only. Ask an administrator (chapter 4). Delete buttons need Full.
I cannot see another branch's documents or stock	You see only the branches ticked on your user (section 4.6). Use the Branch box at the top to switch between your branches.
Cannot save an invoice: "Customer on hold" or "Over the credit limit"	The customer has an invoice more than 10 days overdue, or would go over their limit. Collect payment, or tick **Override and continue anyway** if you are allowed to (section 5.1).
	There is not enough stock in your branch's location. Check Stock by location and transfer stock if needed (section 8.3).
A supplier is missing from the purchase or expense list	Purchase invoices show Inventory Suppliers and expenses show Expenses Suppliers. Change the Supplier Type (section 5.2).
Cannot void an invoice	It has a credit note (delete that first) or is cleared on GRA EVAT (issue a credit note instead) (section 6.1).
The stock check shows a difference	Look for journals posted straight to the inventory account, and run the Ledger Check (section 3.3).
The Trial Balance does not balance	Run the **Ledger Check** in General Settings and contact us before filing anything.
A report looks wrong	Check the From and To dates and the Branch and Business unit boxes. A branch report includes opening balances only if they were entered by branch; a business unit report has none (section 10.1).
A document is "Waiting to upload"	It was entered offline. It uploads when the internet is back. Anything that could not upload is listed under General Settings > Working Offline (section 2.8).
The program asks to restart for an update	Accept it. The desktop program updates itself (section 3.3).
Payroll is read-only	The payroll licence has ended. Enter a new key in Payroll Setup (section 11.2).
A restore asks for a password	The backup was encrypted with the backup password set on that computer (section 3.3).

Contact

Email: 2aprintsservice@gmail.com

WhatsApp: 0546 533 134
