2A Prints Accounting User Manual

2026-10-20 - King Zizou

This manual takes you from your first download to your year-end reports, one screen at a time, with pictures.

1. Welcome

2A Prints Accounting is a desktop accounting program built for Ghanaian small and medium businesses and non-profits. It keeps your sales, purchases, expenses, stock, bank, payroll and tax records in one place and produces the reports the Ghana Revenue Authority (GRA) and your auditors ask for.

How to read this manual. It follows the order in which you will actually use the program: subscribe, install, set up the company, add people and records, record daily transactions, close the month, and read reports. Sections 11 (HR and Payroll) and 12 (NGO mode) are optional and apply only if you use those features.

What you need. A Windows, Mac or Linux computer, an internet connection (the program saves to your online company database and shows "Synced" at the top of the screen), and an email address for your account.

Words used in this manual

Term	Meaning
Company	One set of books. Everything you record belongs to one company.
User	A person who signs in to your company. Each user has a role that decides what they can see and do.
Role	A named set of rights, for example Administrator or Cashier.
Posting	Saving a transaction so it writes its debit and credit entries to the ledger.
Licence key	The code that activates a paid subscription for your company.
Payroll add-on	The optional paid module for staff, payslips, PAYE and SSNIT.

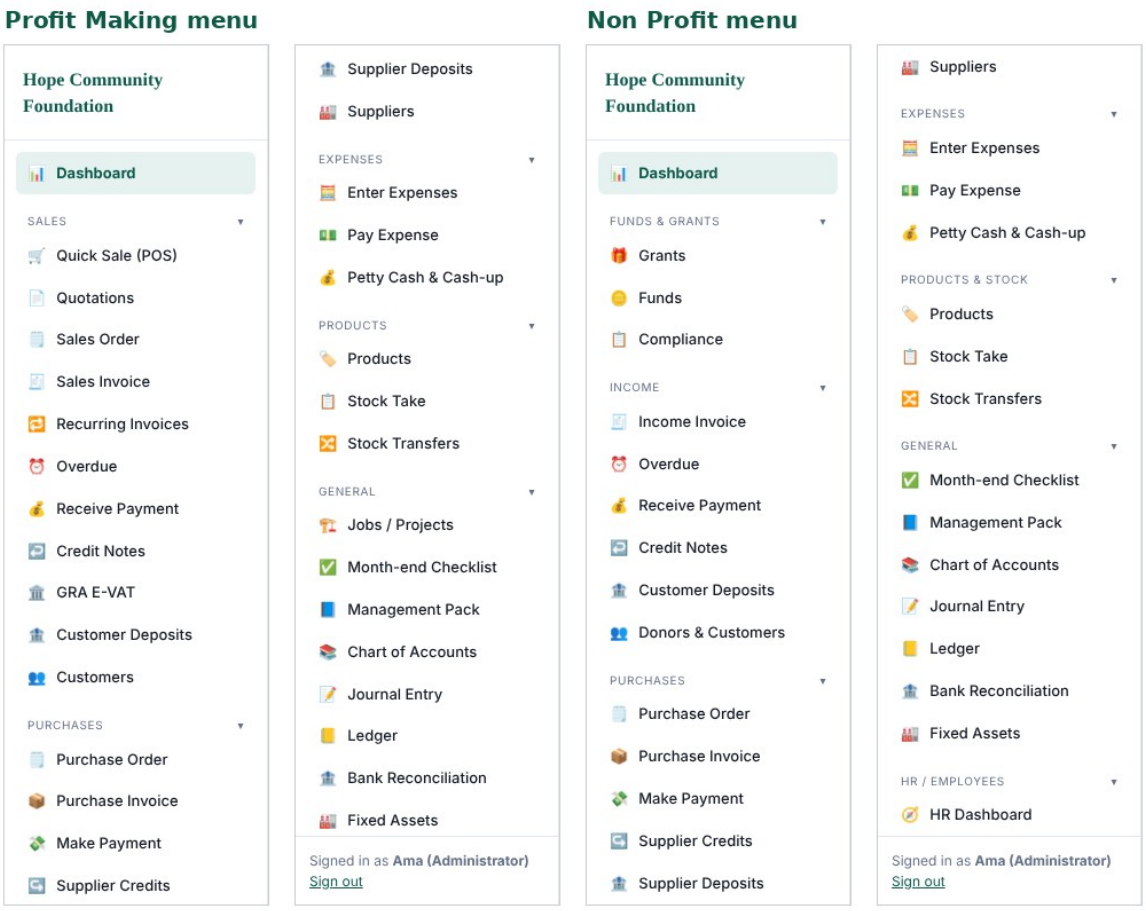

1.1 What is new in versions 2.1.2 and 2.1.3

Version 2.1.2 added a delete right, committed amounts on grants, payment approval and a tidier menu. Each item points to the section that explains it.

New in 2.1.3: withholding tax. Supplier payments now follow the Ghana rules: goods 3%, works 5% and services 7.5% once a supplier's year goes above GHS 2,000, and 20% for non-residents, all worked out on

the amount before VAT (section 7.8). Extra rates of 8%, 10%, 15% and 20% are available, and Receive Payment also works on the amount before VAT.

- **Full rights.** A fourth access level, Full, adds delete to Edit. Only the Administrator role has it by default (section 4.2).
- **A right for every module.** Grants, Funds, Compliance, Quick Sale (POS), Recurring Invoices, Overdue, Budget vs Actual, Supplier Deposits, Currencies and Audit Log each have their own right (4.2).
- **Committed on funds and grants.** Bills charged to a grant but not yet paid show as Committed, not Spent (12.2 to 12.4).
- **Overspend warning.** You are warned when a restricted fund has spent or promised more than it received (12.4).
- **Payment approval.** Large supplier payments made by someone without Full rights wait for approval (3.2 and 7.3).
- **Petty cash can be edited** (7.6).
- **Safety backup before deletes.** In the desktop app, a copy is saved to your Backup folder before a delete (4.2).
- **Menu changes.** Products, Stock Take and Stock Transfers sit together in a Products group that also shows in Non Profit mode. Customer Deposits are under Sales and Supplier Deposits under Purchases (6.10 and 7.7). In Admin, Company Information, you can hide more menus for Non Profit mode (12.1).
- **Tax tick box.** Sales, purchases and expenses have a Charge VAT and levies tick box, so an item that carries no VAT can be recorded without it.
- **Payment forms.** Receive Payment, Make Payment and Pay Expense show invoices with a balance first; a filter shows fully paid or all invoices. Pay Expense lists only Expenses Suppliers.
- **Fixed lists.** Supplier type is Expenses Supplier or Inventory Supplier. Product type is Inventory or Non Inventory.
- **Leave days by level.** An employee's level sets the leave days; the program asks you to enter them if a level has none (11.2).
- **Licences.** If the accounting licence ends but the payroll licence is still valid, HR and Payroll keep working.

The menu in Profit Making and Non Profit mode

2. Getting started

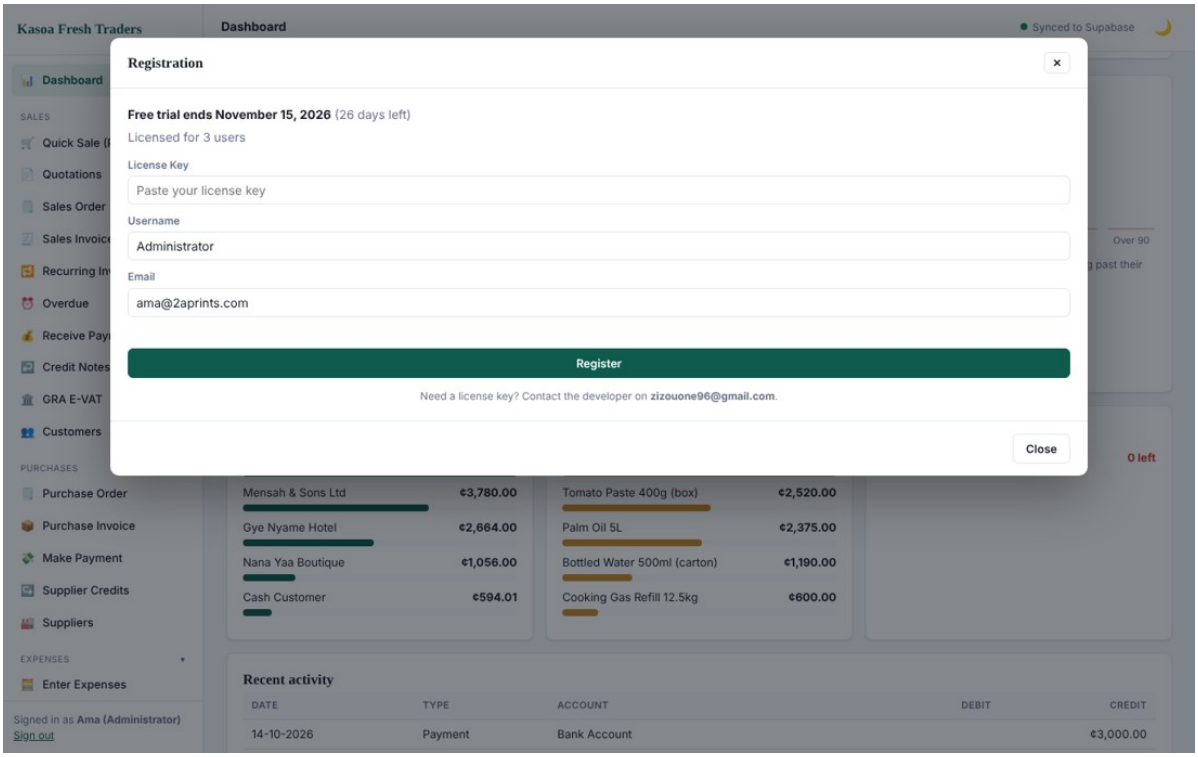

2.1 The 30-day free trial

Every new company gets a 30-day free trial with all main features. A banner on the Dashboard shows the days left and offers three buttons: **Enter licence key**, **Request more time** and **WhatsApp us**. When the trial ends there is a 7-day grace period in which you can still open and read your records but not post new transactions. Subscribe before the grace period ends to keep working without interruption.

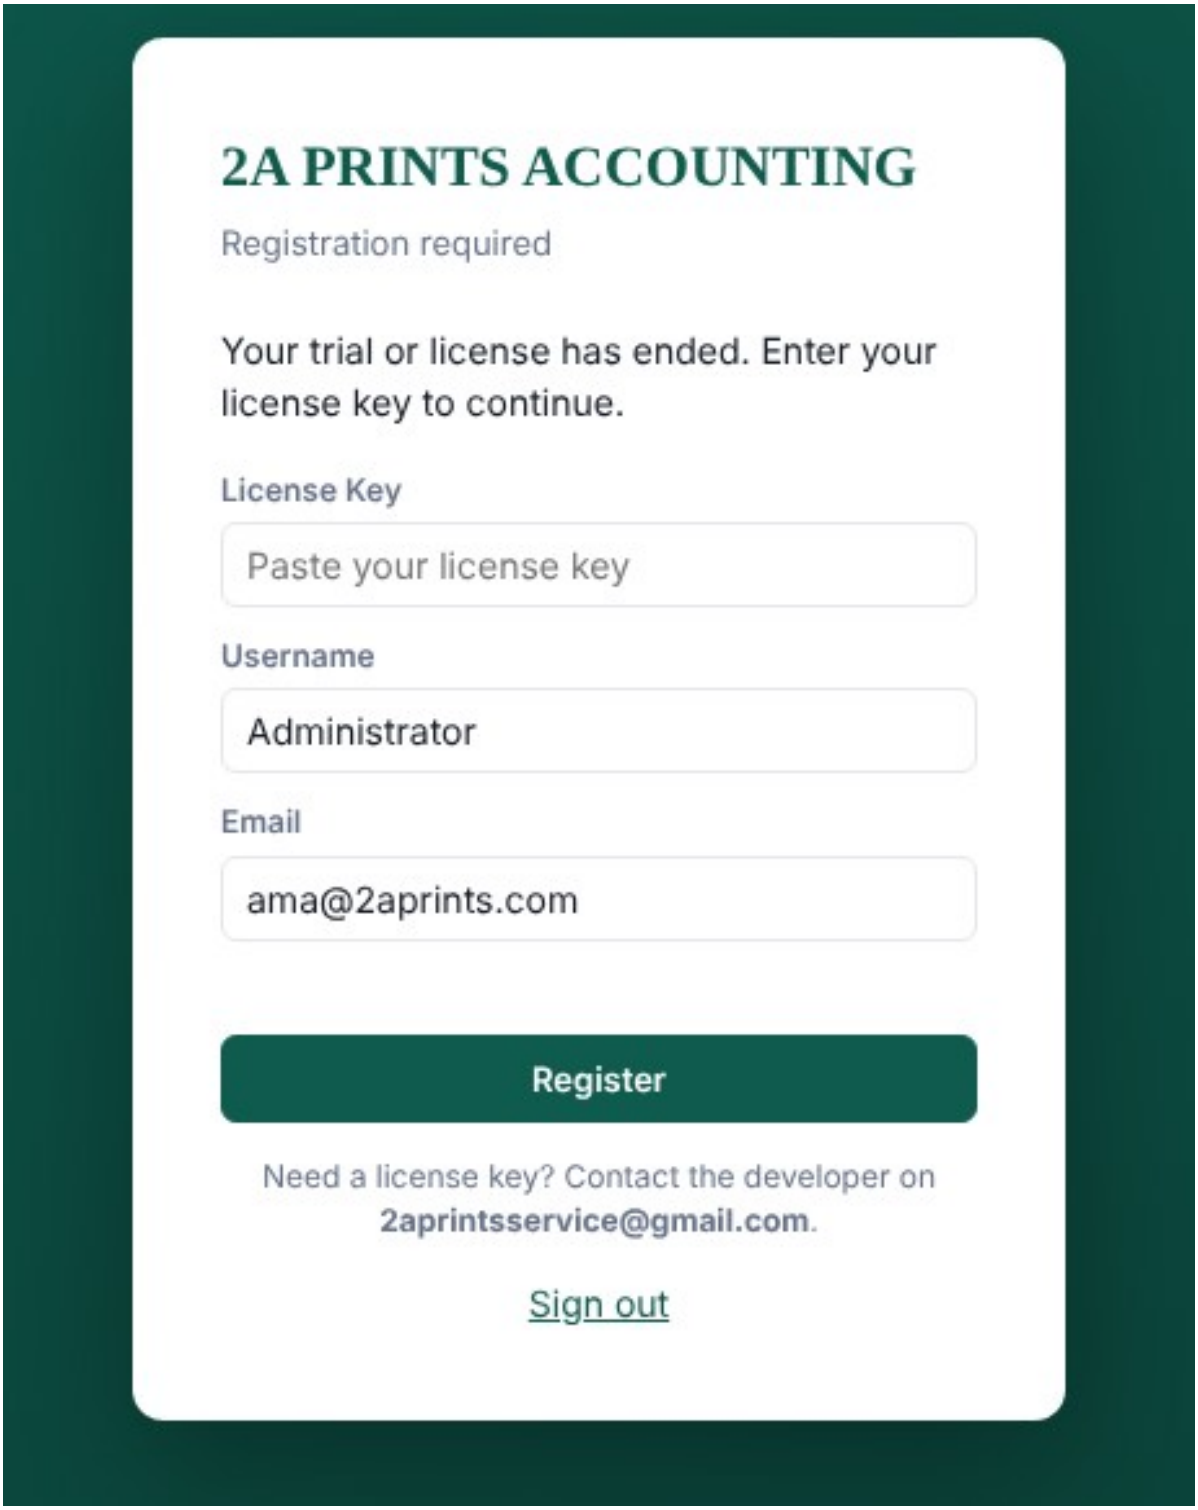

2.2 Subscribing and activating a licence key

1. Contact the developer on WhatsApp (0546 533 134) or by email (2aprintsservice@gmail.com) and choose a plan. The Payroll add-on is priced separately.
2. Pay as agreed. You receive a licence key by email.
3. In the program, click **Enter licence key** on the trial banner (or the licence prompt that appears when the trial has ended).

4. Paste the key exactly as received and confirm. The program contacts the licence server and shows your plan and expiry date.

Registration window where the licence key is entered

Screen shown when a subscription is required

Keep the key safe. If it fails, check that you copied it with no spaces and that your internet is on, then use WhatsApp us.

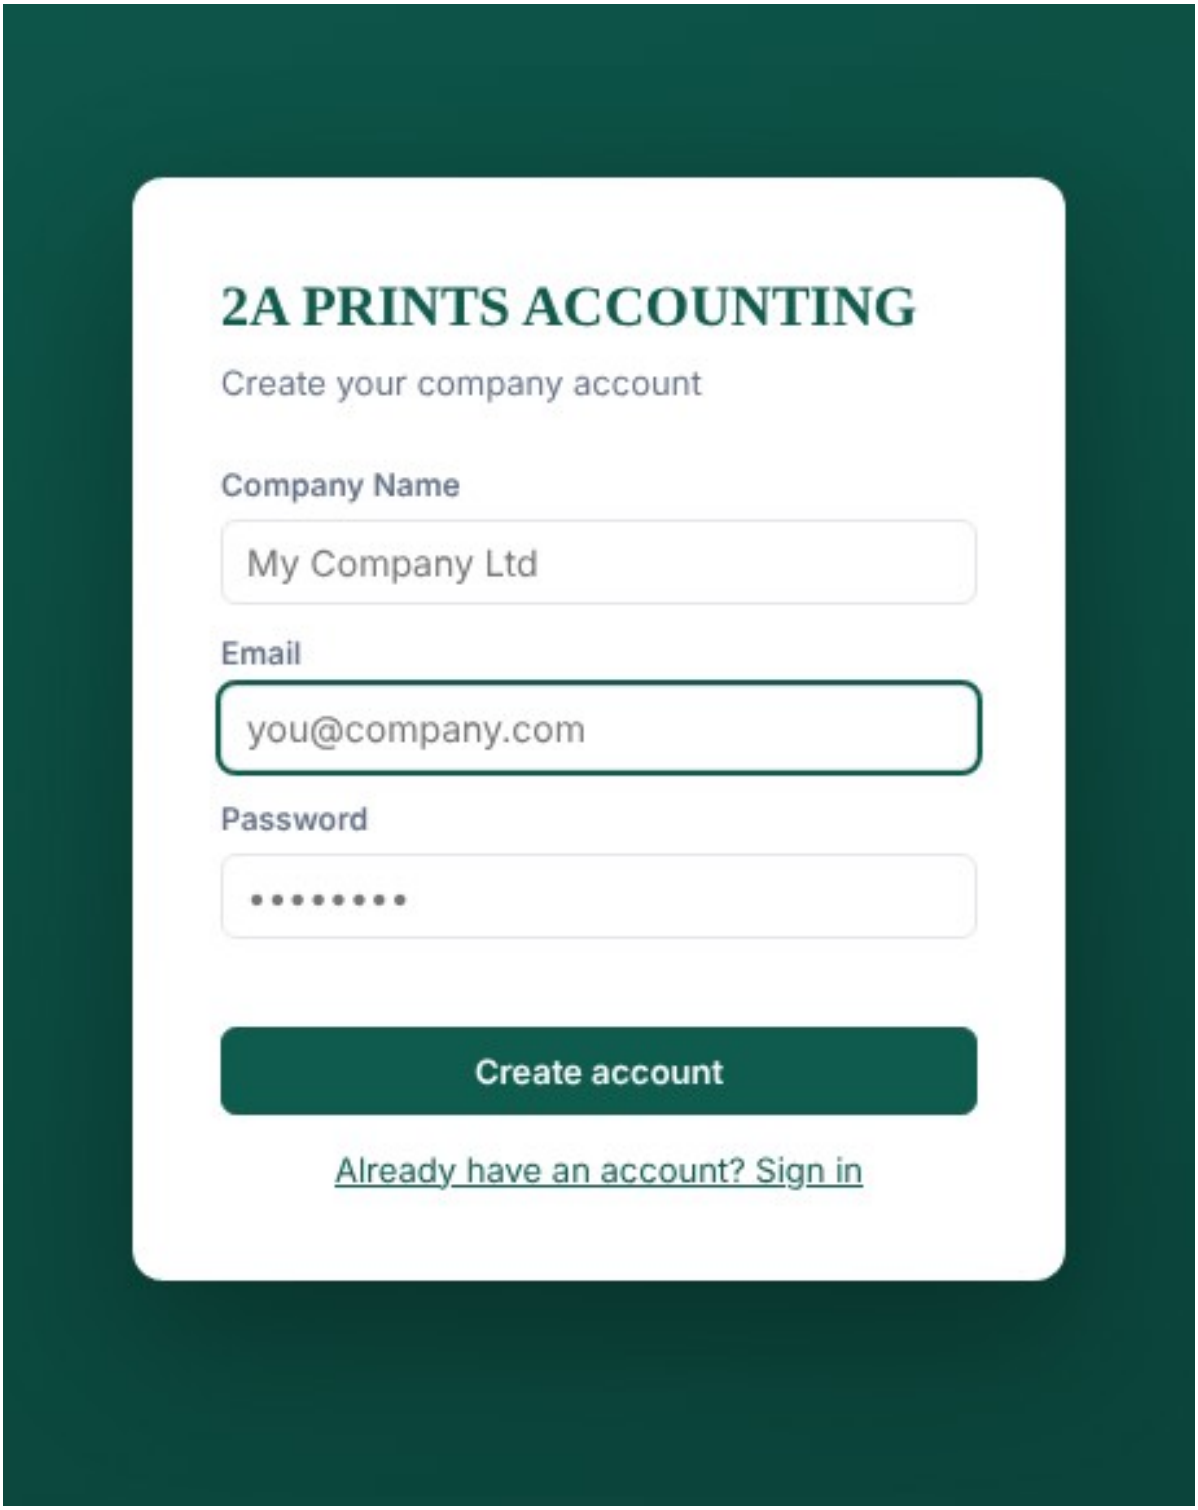

2.3 Installing the program

1. Download the installer for your system: a Windows .exe, a Mac .dmg or a Linux AppImage.
2. Windows: double-click the .exe and follow the prompts. If Windows SmartScreen warns about an unknown publisher, click **More info** then **Run anyway**.
3. Mac: open the .dmg and drag the app into Applications. On first launch, right-click the app and choose **Open**.
4. Linux: make the AppImage executable (right-click, Properties, Allow executing) and open it.
5. The program updates itself when a newer version is published; accept the update prompt when it appears.

If you received the installer in several numbered parts, put all parts and the join script in one folder and run the join script first. It rebuilds the full installer.

2.4 Creating your account

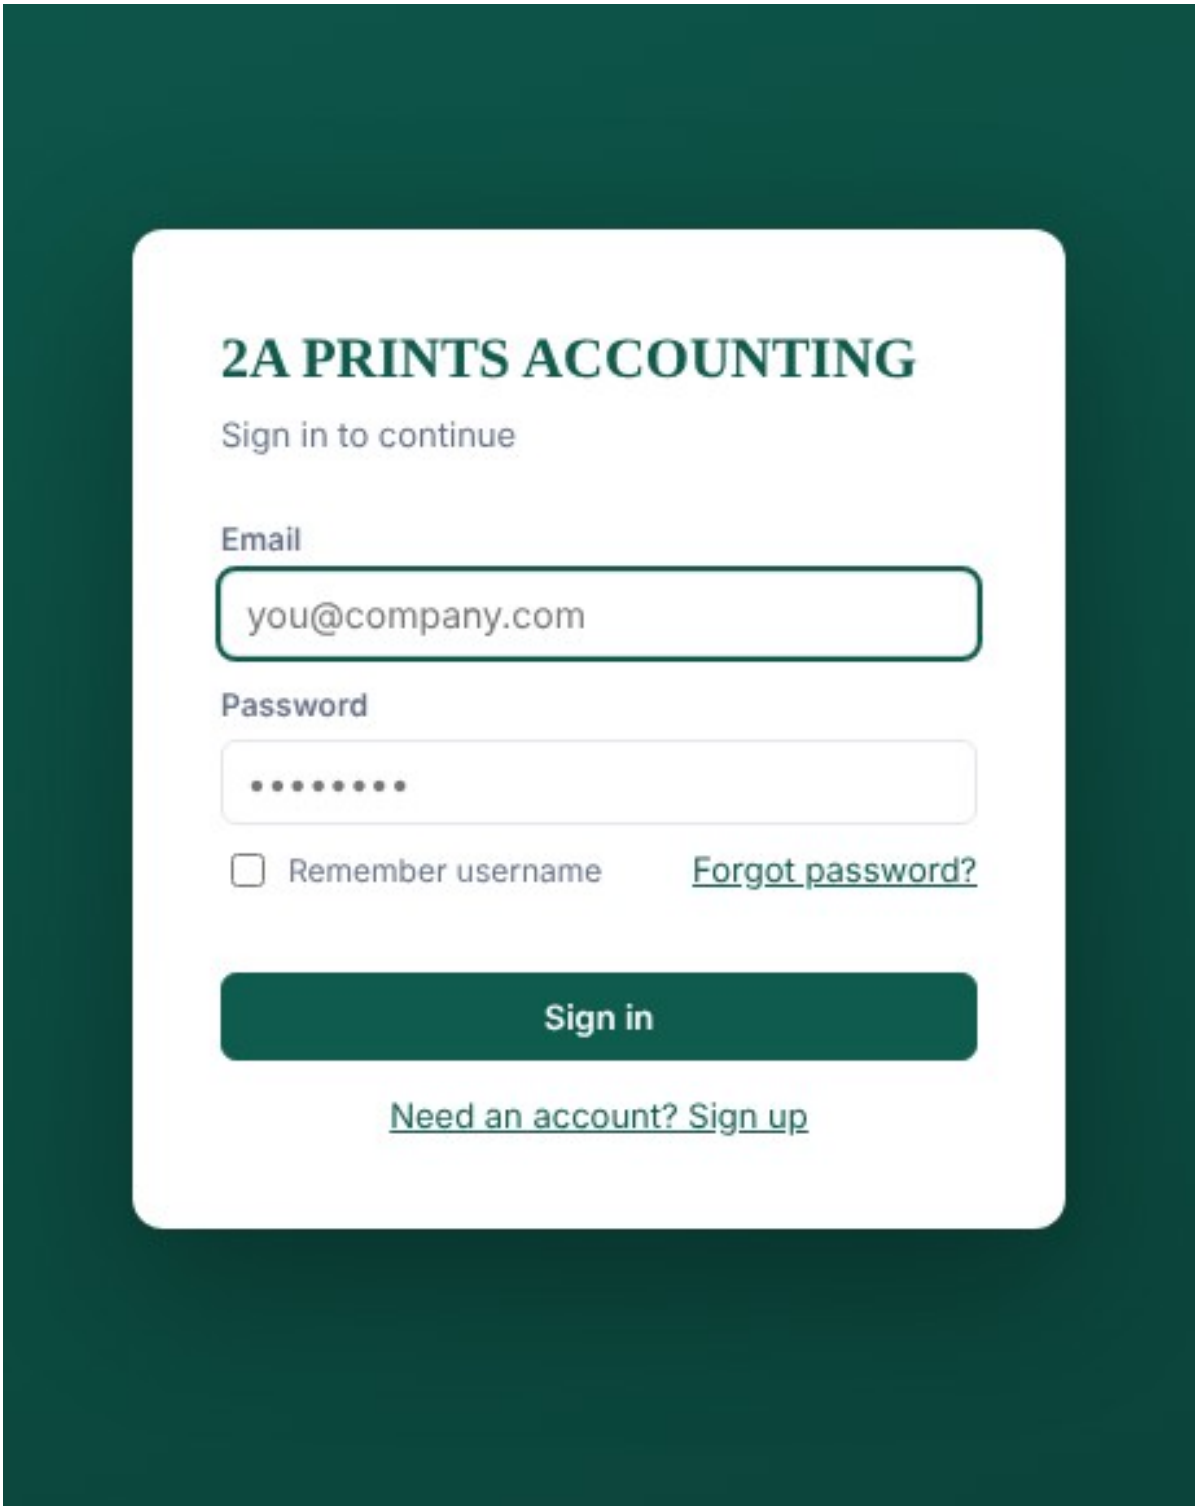

On the first screen choose **Need an account? Sign up**. Enter your name, email and a password, then confirm. The first person to sign up becomes the company Administrator.

Sign-up card

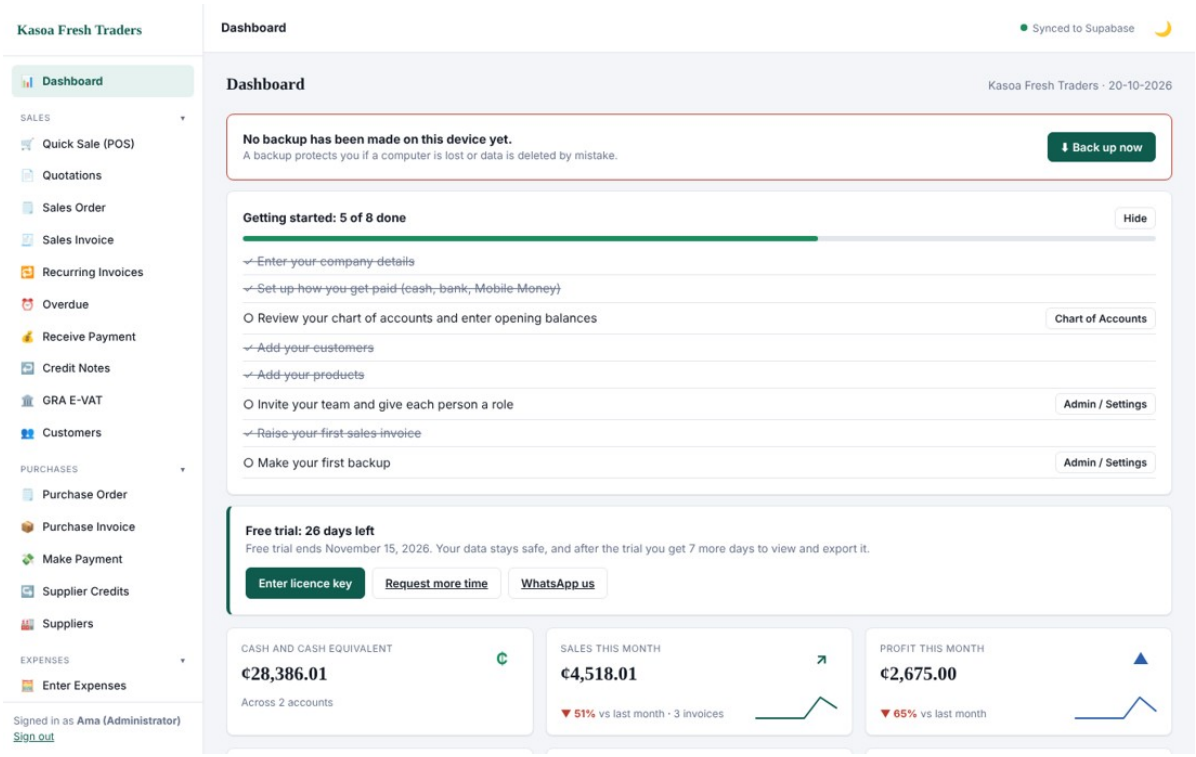

2.5 Signing in

Enter your email and password and click **Sign in**. Tick **Remember username** to save your email on this computer. If you forget your password, click **Forgot password?** and follow the email link.

Sign-in card

After sign-in you land on the Dashboard.

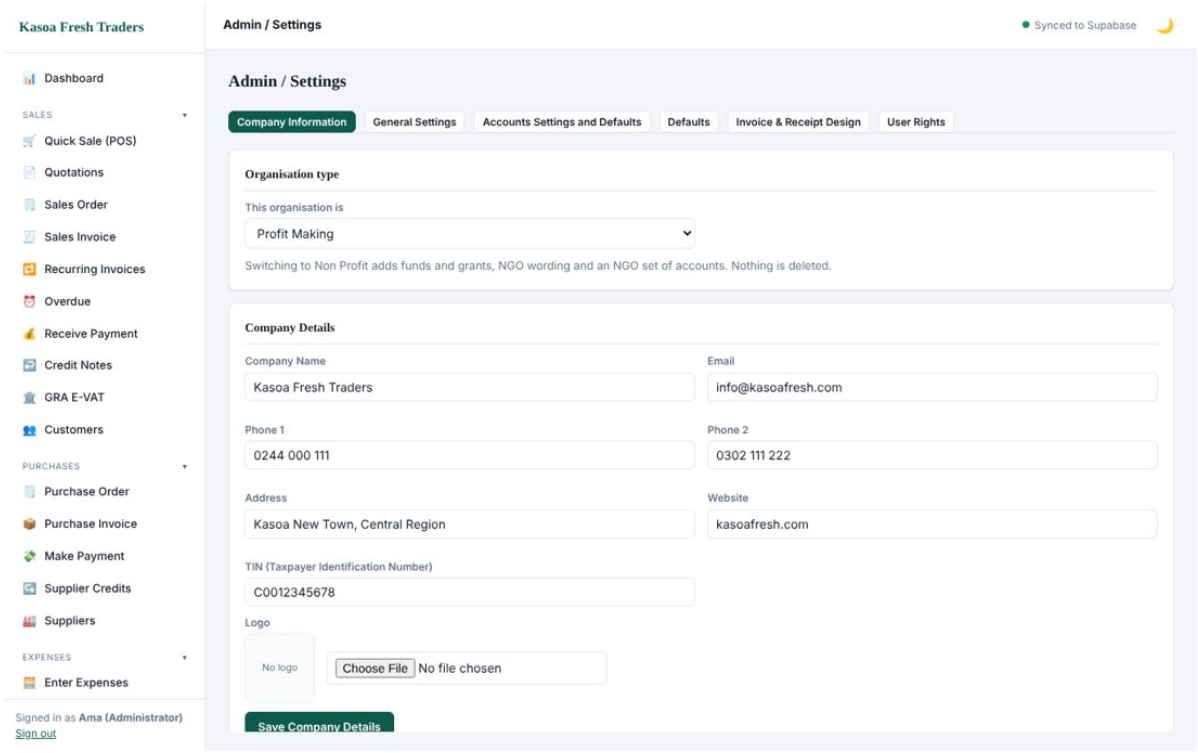

The Dashboard

The left menu lists every area you have rights to, in groups: Sales, Purchases, Expenses, Products, General, HR / Employees, Payroll, Reports and System. The top bar shows the sync status ("Synced") and a moon icon that switches between light and dark screens. Your name and role appear at the bottom of the menu together with **Sign out**.

3. Setting up your company

Open **Admin / Settings** from the menu. It has six tabs: Company Information, General Settings, Accounts Settings and Defaults, Defaults, Invoice & Receipt Design, and User Rights. Do the setup once, in this order, before recording transactions.

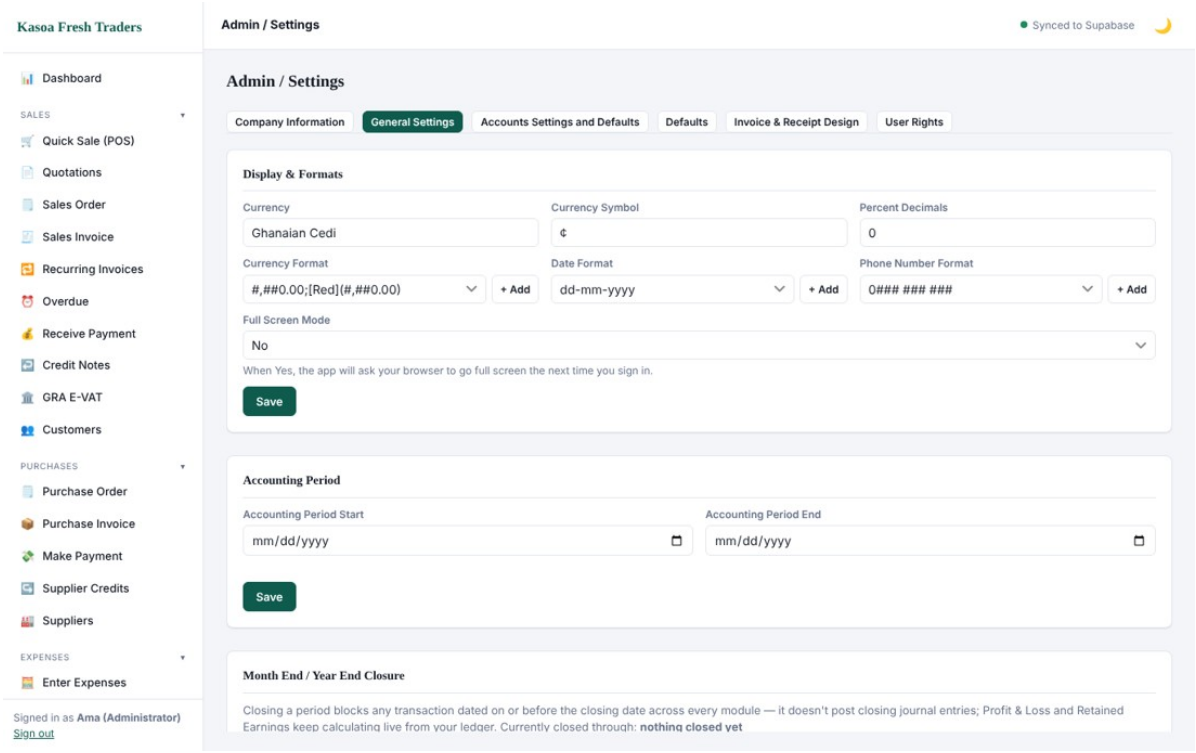

3.1 Company Information

Company Information tab

1. **Organisation type.** Choose **Profit Making** (the normal choice) or **Non Profit** (see section 12). You can switch later; nothing is deleted.
2. Fill in Company Name, Email, Phone 1 and 2, Address and Website. These print on invoices and reports.
3. Enter the **TIN** (Taxpayer Identification Number). It appears on tax invoices and GRA reports.
4. Choose a **Logo** file. A square or wide PNG or JPG works best.
5. Click **Save Company Details**.

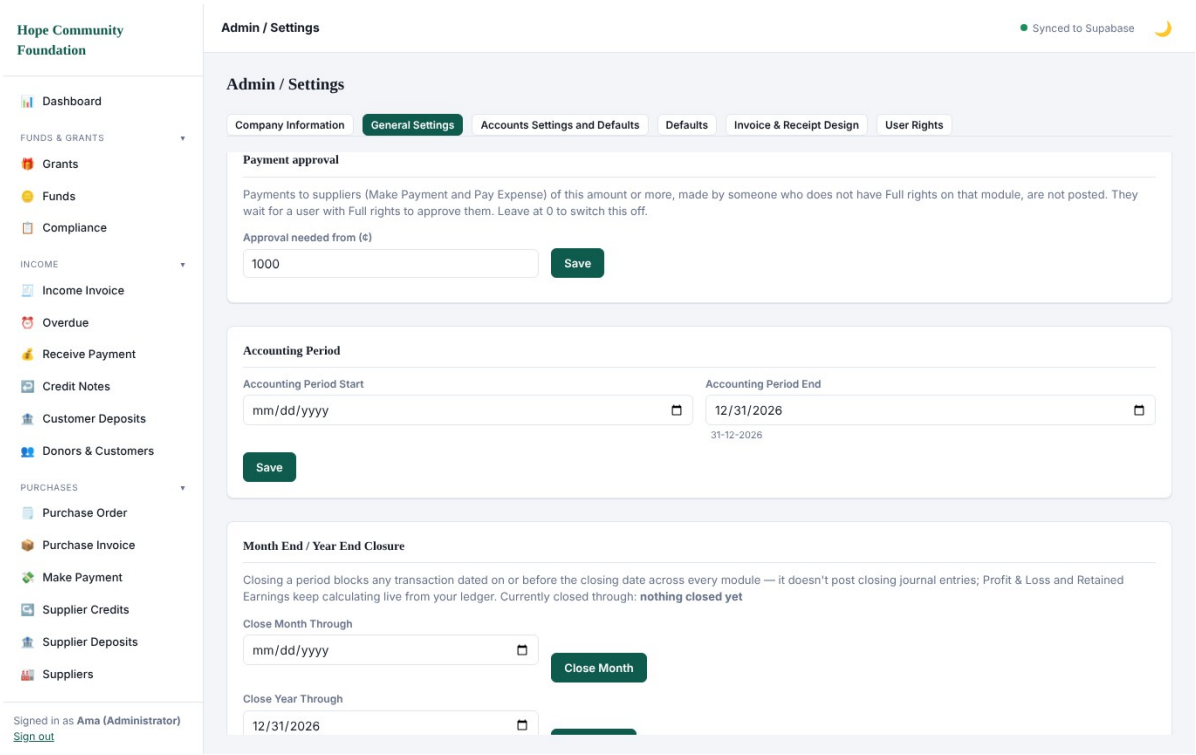

3.2 General Settings

General Settings tab

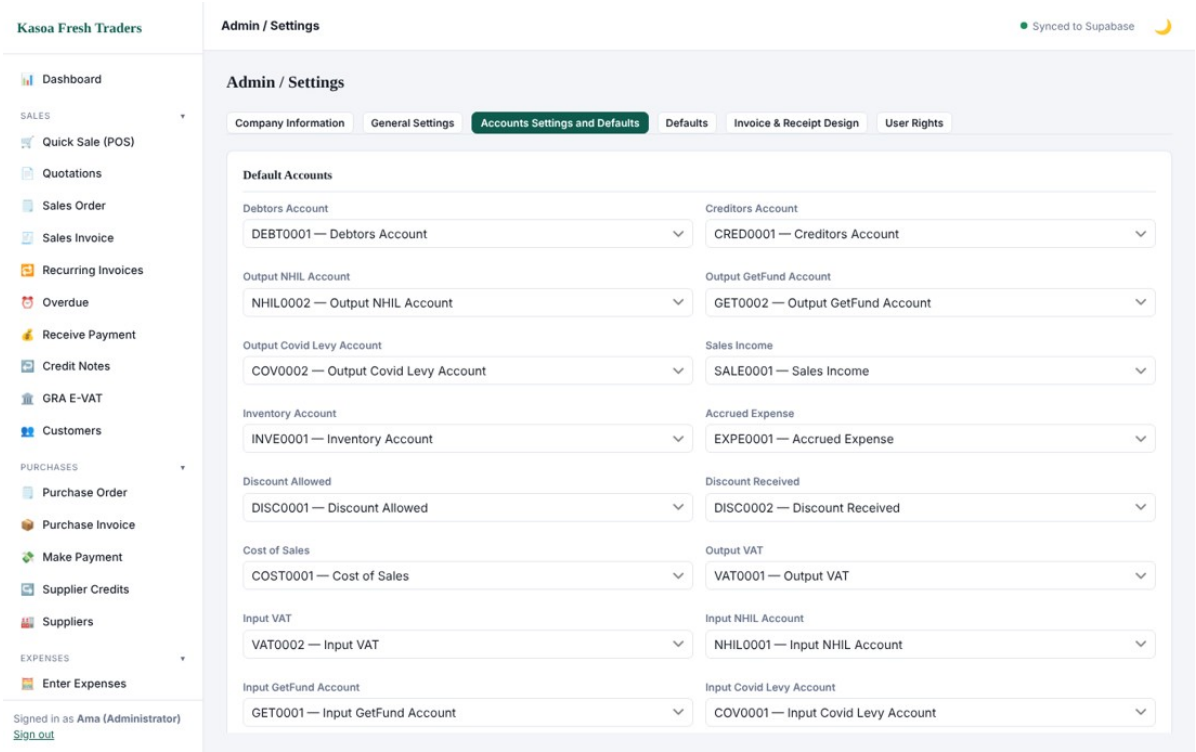

- **Display & Formats:** currency name and symbol (Ghanaian Cedi, ¢), number format, date format (dd-mm-yyyy is the default), phone number format and full-screen mode. Click **Save**.
- **Accounting Period:** set the start and end date of your financial year. Reports default to this period.
- **Month End / Year End Closure:** closing a period blocks any transaction dated on or before the closing date. It does not stop closing journal entries. See section 9.

Payment approval. Enter an amount to require approval for supplier payments (Make Payment and Pay Expense) of that amount or more when they are made by someone without Full rights on that module. Leave it at 0 to switch this off. See section 7.3.

Payment approval setting in General Settings

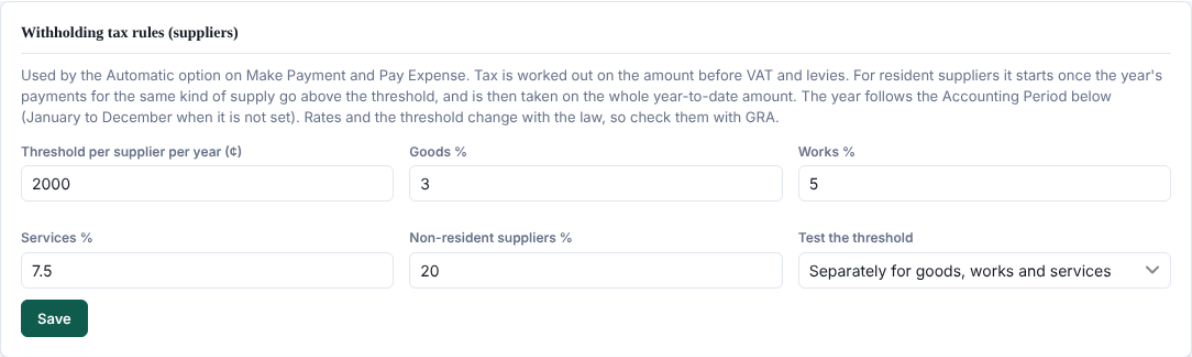

3.3 Accounts Settings and Defaults

Default accounts

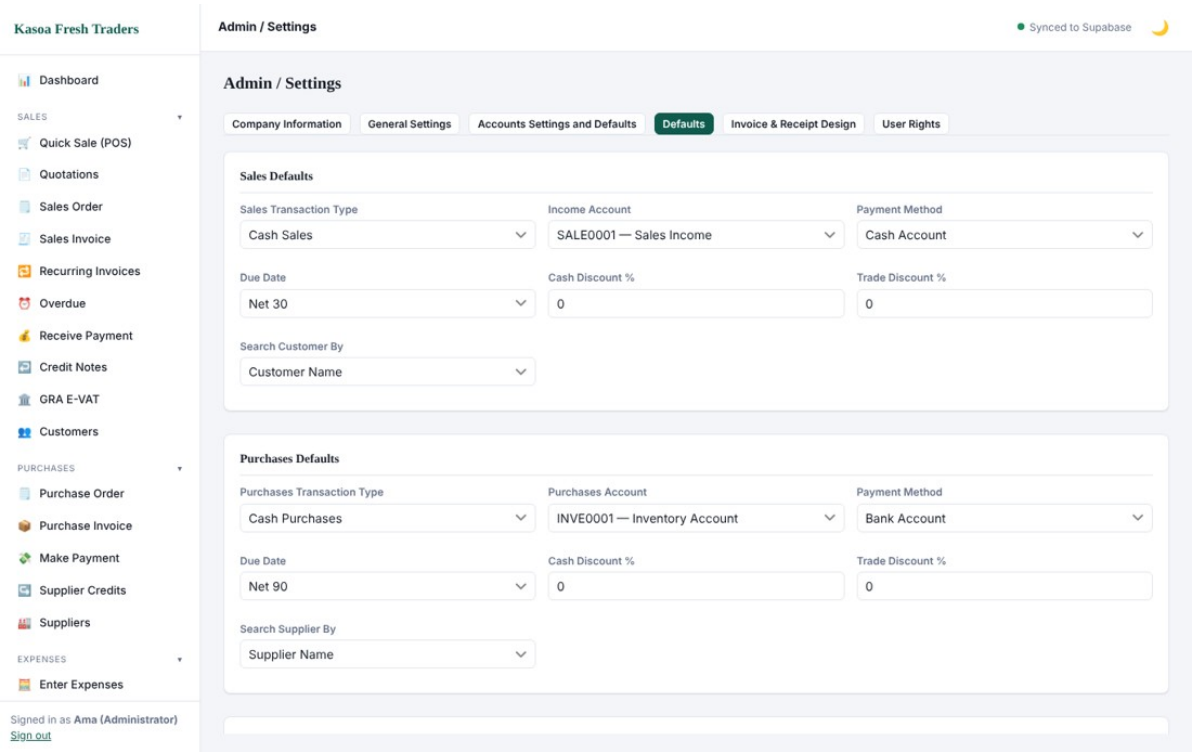

This tab tells the program which ledger account to use automatically: Debtors, Creditors, Sales Income, Inventory, Cost of Sales, Discount Allowed and Received, Accrued Expense, and the output and input tax accounts (VAT, NHIL, GetFund, COVID levy). The standard chart of accounts is already linked, so change these only if your accountant has changed the chart.

The **Withholding tax rules** panel on this tab holds the yearly threshold and the rates used by Make Payment and Pay Expense (section 7.8). The lists of **WithHolding Tax** rates for debtors and creditors now include 8%, 10%, 15% and 20%.

Withholding tax rules in Admin

3.4 Defaults

Sales and Purchases defaults

Defaults save typing. For Sales set the usual transaction type, income account, payment method, due date terms (for example Net 30), discounts, and whether you search customers by name or code. Purchases has the same set (for example Net 90). You can override any default on an individual transaction.

3.5 Invoice & Receipt Design

Choose the layout, colours and footer text of printed invoices, receipts and statements. Use **Preview** before saving.

3.6 Chart of accounts

Open the Accounts list from the menu (Ledger area) to see every account. Accounts are grouped as Asset, Liability, Equity, Income, Cost of Sales and Expense.

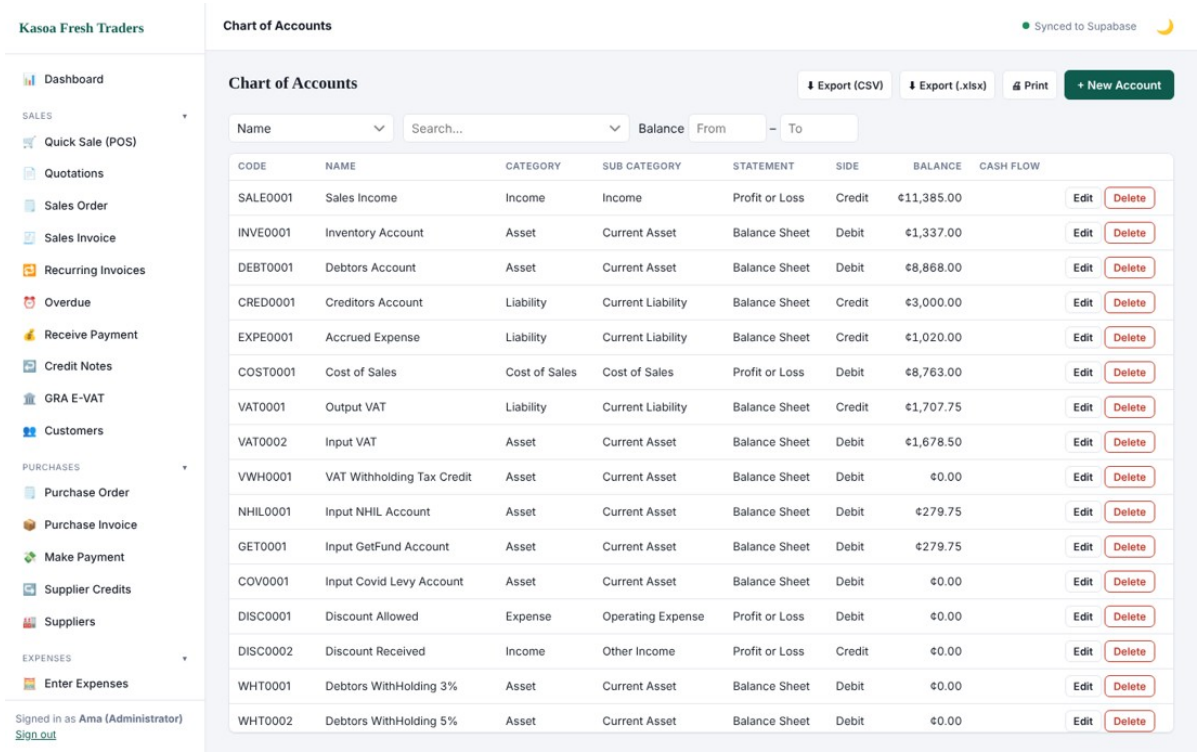

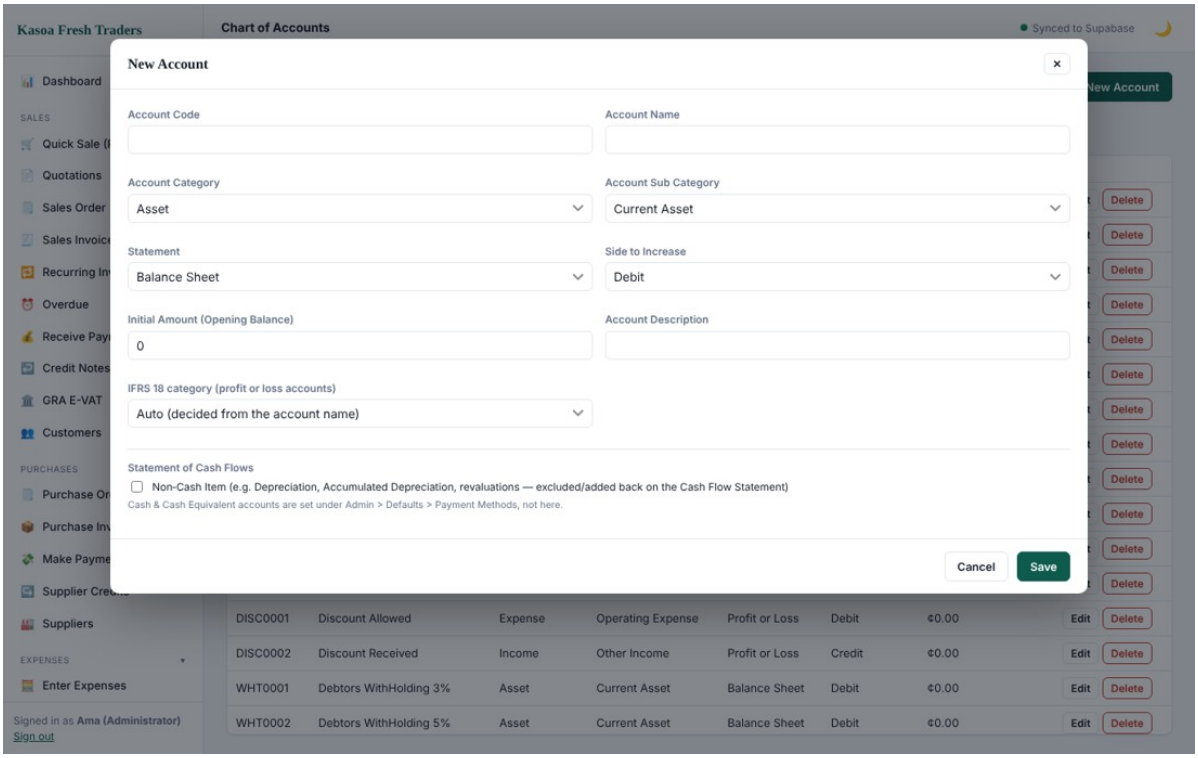

Chart of accounts

To add one, click **New account**, choose the category and sub-category, give it a name and save. The program assigns the code.

New account form

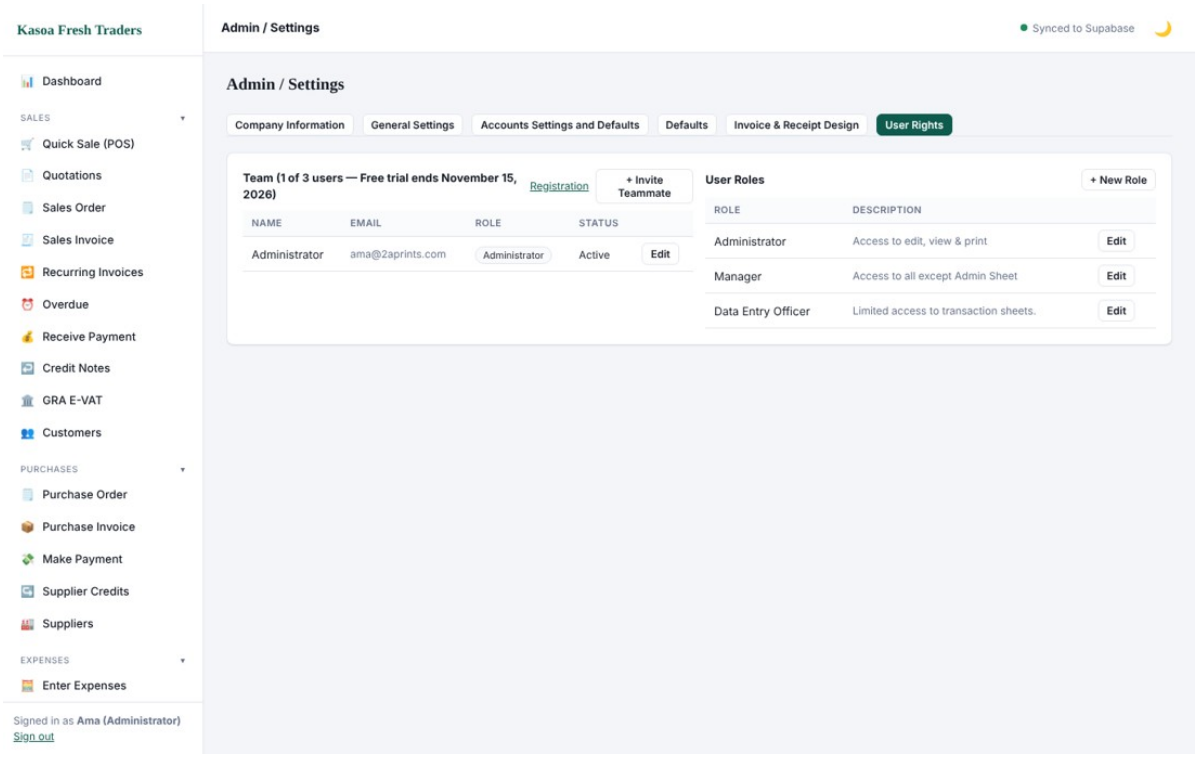

Do not delete an account that already has entries; make it inactive instead.

3.7 Opening balances

Bring your starting position into the books with a journal dated the day before you begin (section 9.1): debit cash, bank, stock, debtors and fixed assets, credit creditors, loans and capital. Opening customer and supplier balances are best entered as opening invoices so that ageing reports work.

4. Users, roles and rights

Every person who signs in is a user with a role. Only an Administrator can add users and change rights.

User Rights tab

4.1 Adding a user

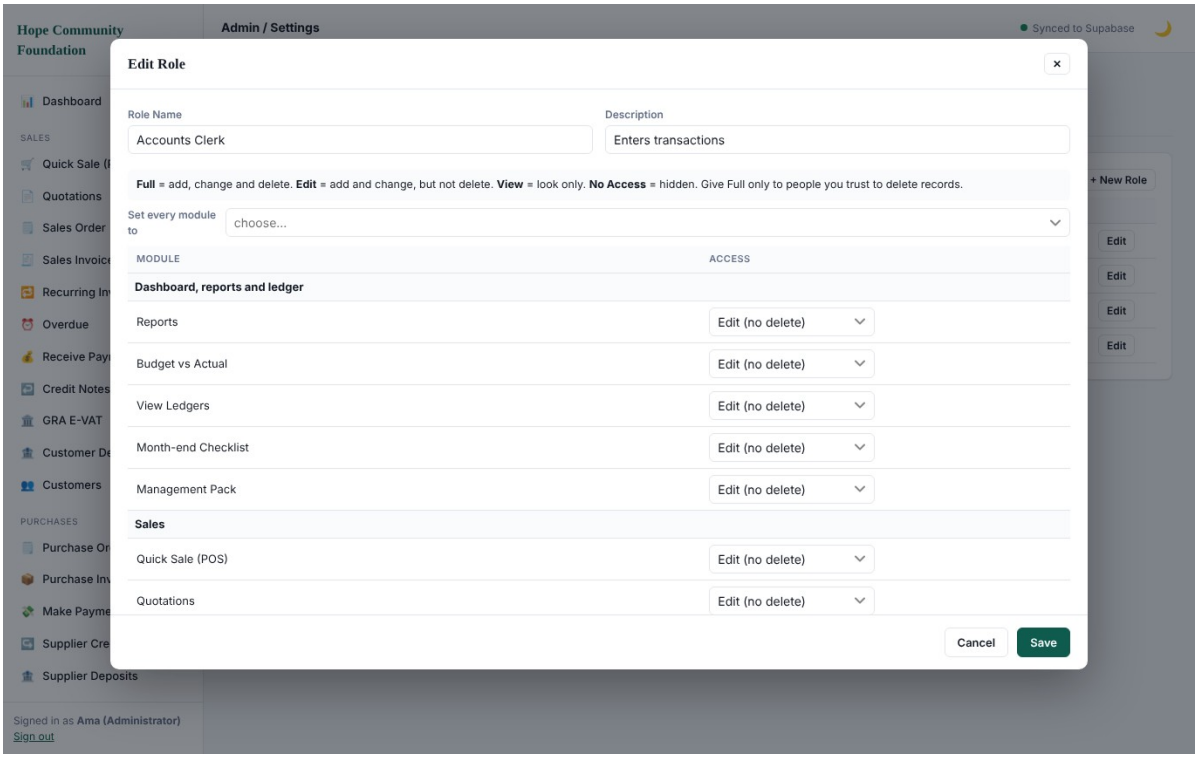

1. Open **Admin / Settings**, then **User Rights**.
2. Click **Add user**, enter the person's name and email, and choose a role.
3. Send them the sign-up link. When they register with that email they join your company with that role.

4.2 Roles and rights

A role is a list of rights. For each area (Sales, Purchases, Expenses, Products, Funds and Grants, Banking, Reports, HR, Payroll, System) you choose one of four levels:

- **Full**: add, change and delete.
- **Edit**: add and change, but not delete.
- **View**: look only.
- **No Access**: the menu item is hidden.

Only the Administrator role has Full by default. Every other role keeps Edit until an administrator chooses Full for it. Delete buttons are hidden for anyone who does not have Full on that module. The **Set every module to** box fills the whole list in one step, and each section of the list has its own heading.

Role form with the Full, Edit, View and No Access levels

Suggested roles:

Role	Typical rights
Administrator	Full rights on everything, including users and settings; the only role that can delete
Accountant	Edit on all transactions and reports (no deleting), no user management
Sales / Cashier	Sales, POS and receipts; view customers and stock
Store keeper	Stock, purchases view and transfers
HR / Payroll	HR and Payroll only (needs the Payroll add-on)
Viewer	View and reports only

Give each person the smallest set of rights they need. Review them whenever staff change, and remove access when someone leaves.

Because only Full can delete, other users correct mistakes with credit notes and reversing journals, or ask an administrator. In the desktop app, a safety copy of the books is saved to the Backup folder before a delete (at most once every 30 minutes). Set the Backup folder under Admin.

4.3 Accountability

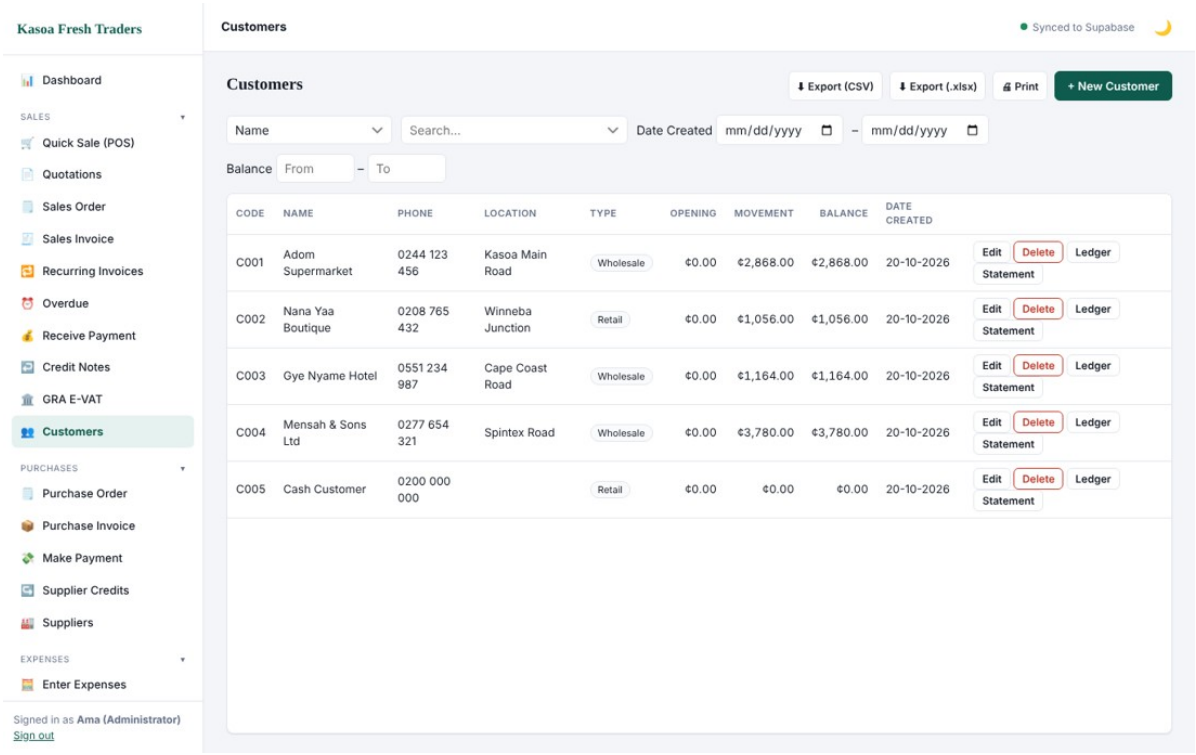

Every posting records who made it and when. The Audit Log (section 13) shows the history.

5. Customers, suppliers and products

Create these records before you sell or buy. They are the building blocks of every invoice.

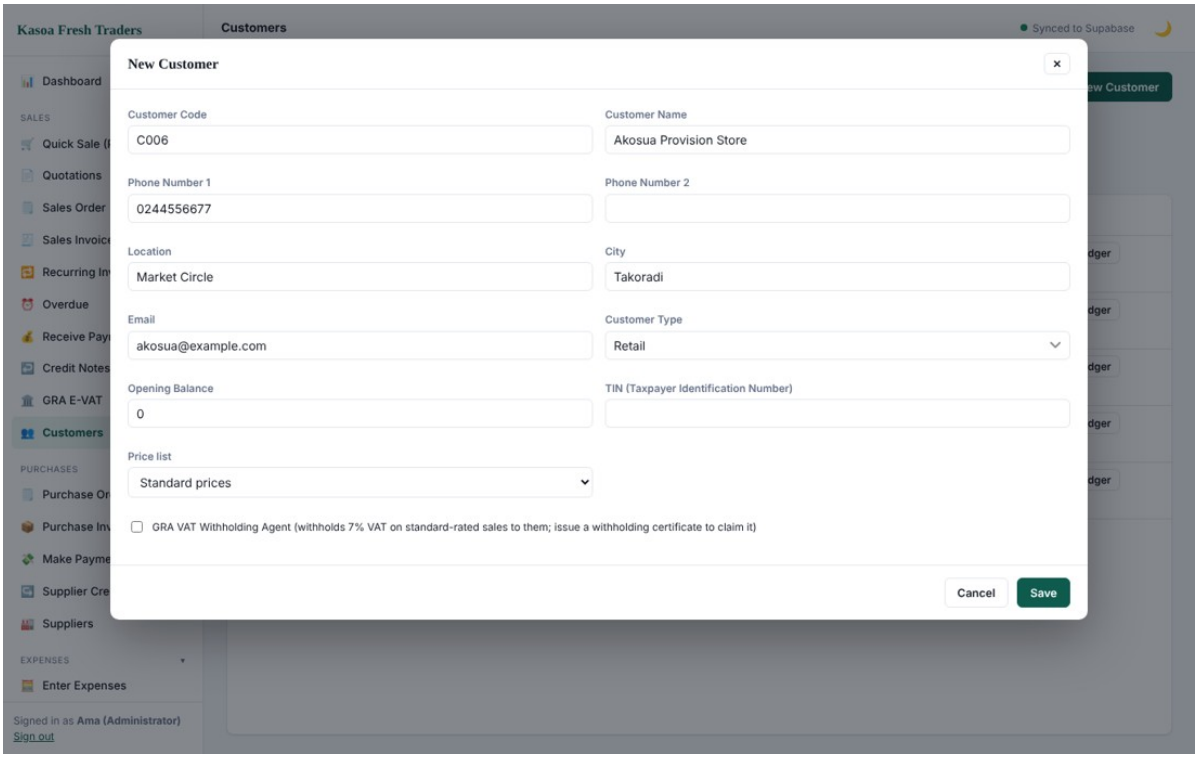

5.1 Customers

Open **Customers** under Sales.

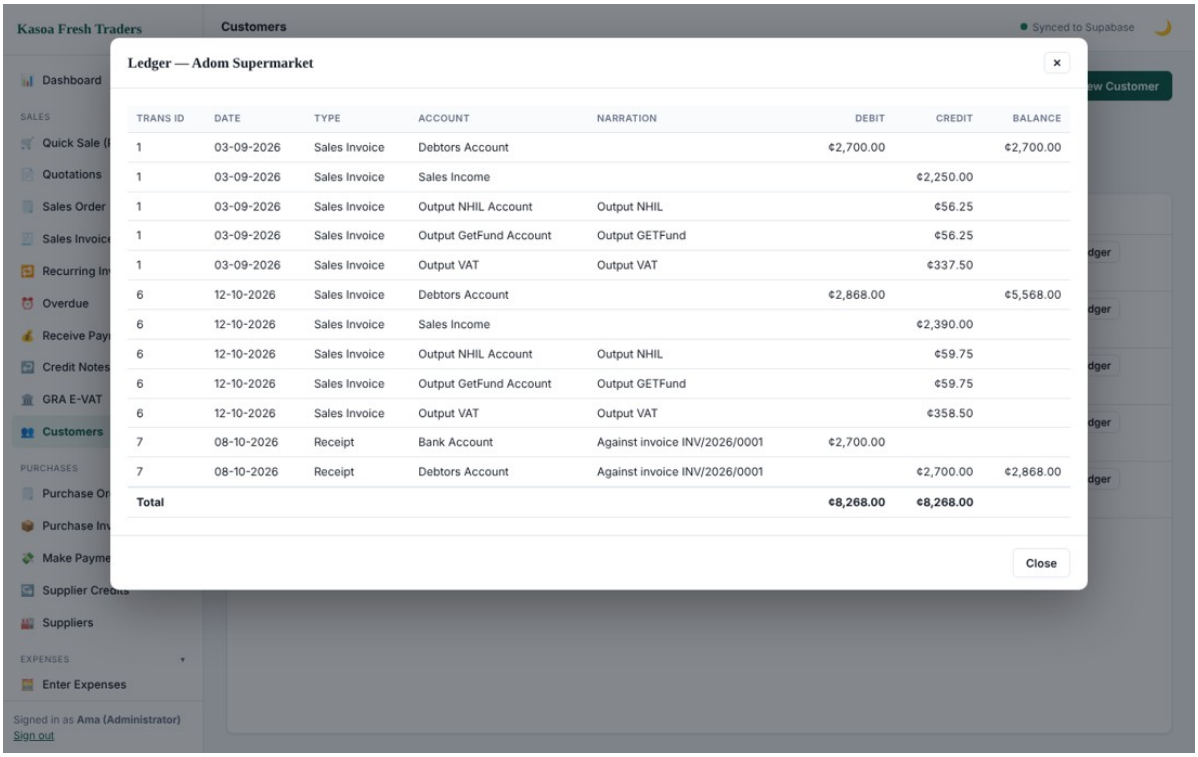

Customers list

1. Click **New customer**.
2. Enter a code and name. Add phone, email, address and TIN if the customer needs a tax invoice.
3. Set a credit limit and payment terms if you sell on credit. The program warns you (and can hold the sale) when a customer is over the limit or has overdue invoices.
4. Save.

Customer form

Open a customer's ledger to see every invoice, receipt and credit note, with a running balance. You can print or share it as a statement.

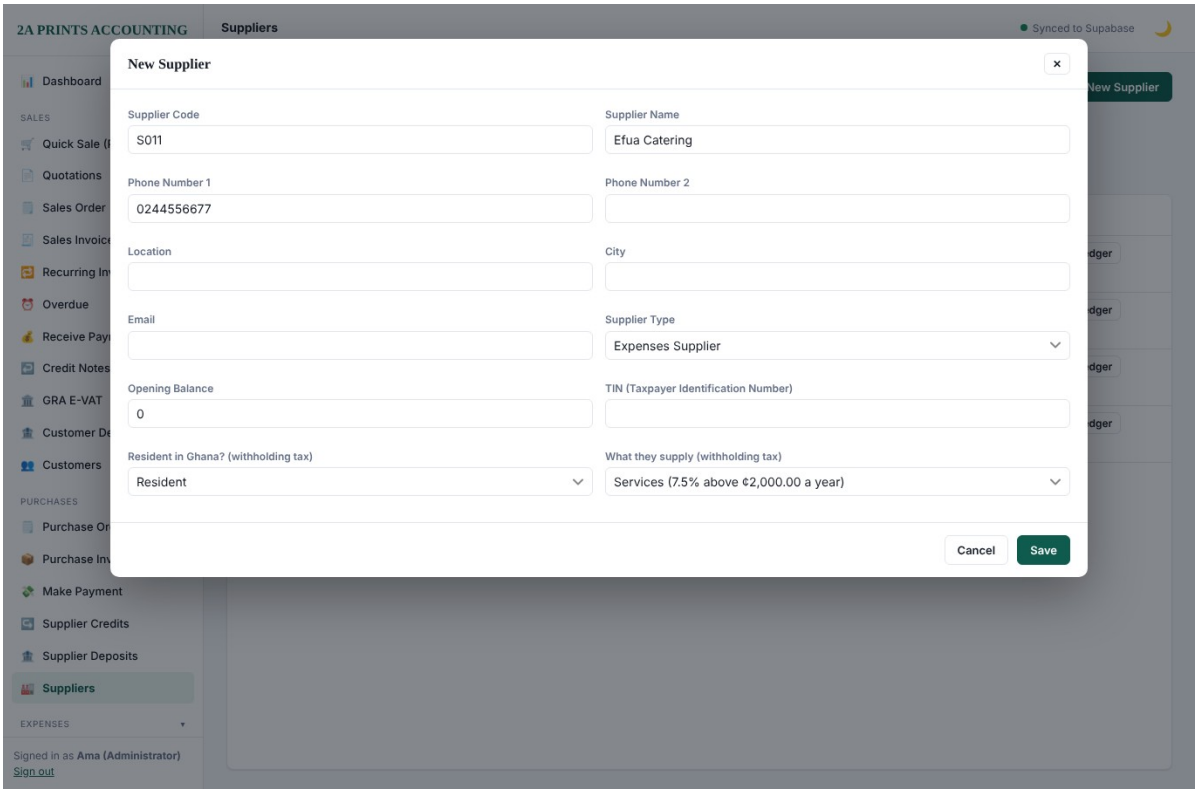

Customer ledger

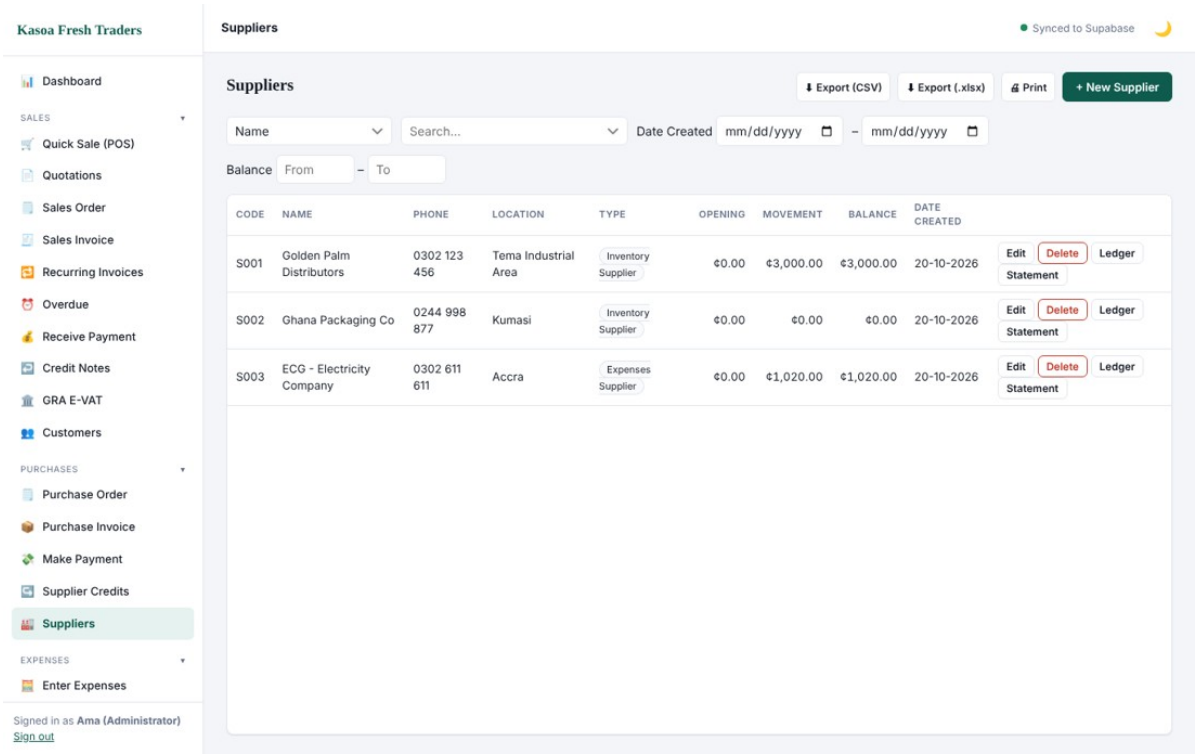

5.2 Suppliers

Open **Suppliers** under Purchases. The form is the same as for customers: code, name, contact details, TIN and terms. Choose the supplier type (for example Expenses Supplier or Goods Supplier) so that it appears in the right pick-lists.

On a supplier, also choose **Resident** or **Non-resident**, and **What they supply** (Goods, Works, Services or Not subject). These set the withholding tax on payments to that supplier (section 7.8). A new Inventory Supplier starts as Goods.

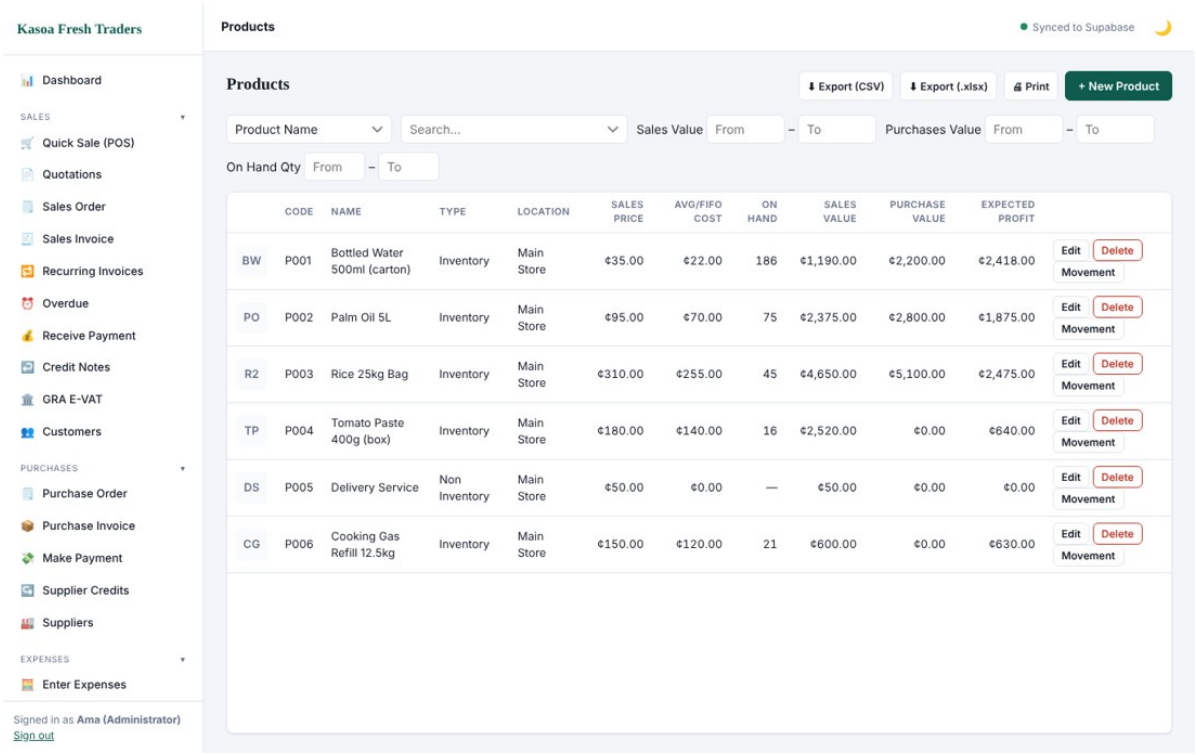

Supplier form with the withholding tax fields

Suppliers list

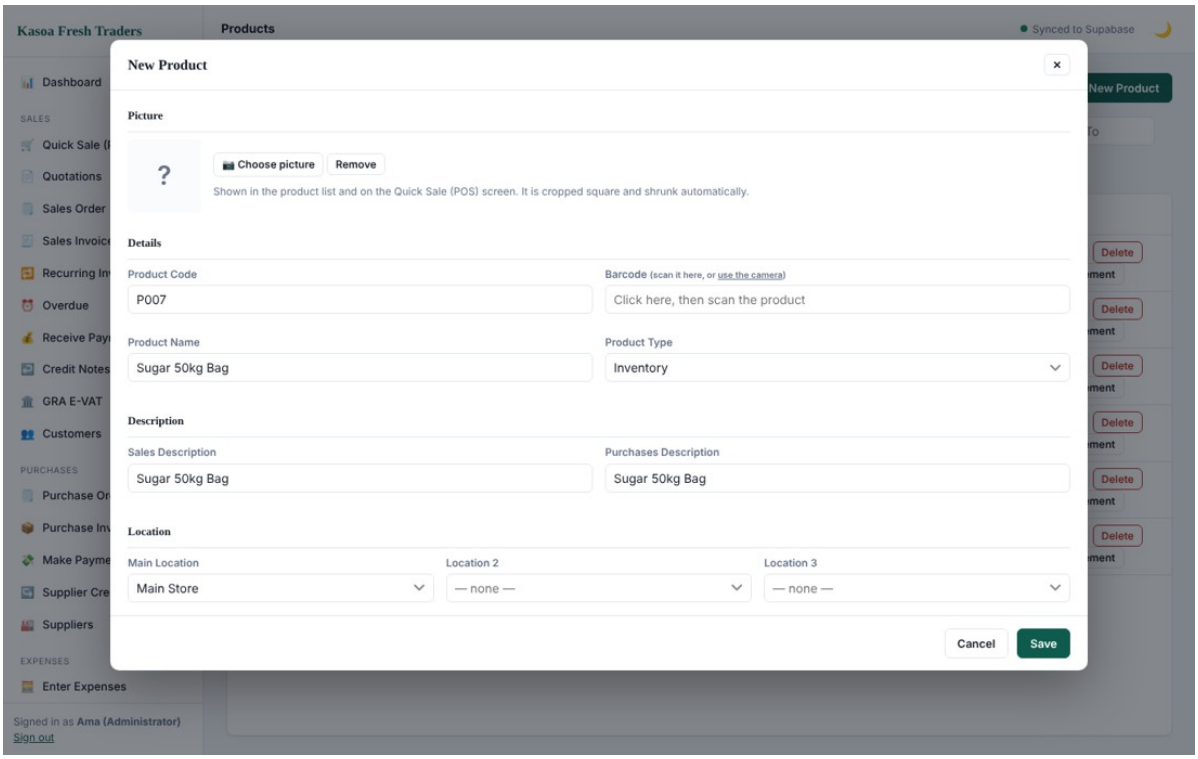

5.3 Products and services

Open the products list from the Products group in the menu.

Products list

1. Click **New product**.
2. Enter a code, name and unit.
3. Choose whether it is a stocked item (quantity tracked) or a service (no stock).
4. Enter the **sales price** and the latest cost, and the tax treatment.
5. For stocked items enter the opening quantity and its value. The program uses weighted average cost.
6. Save.

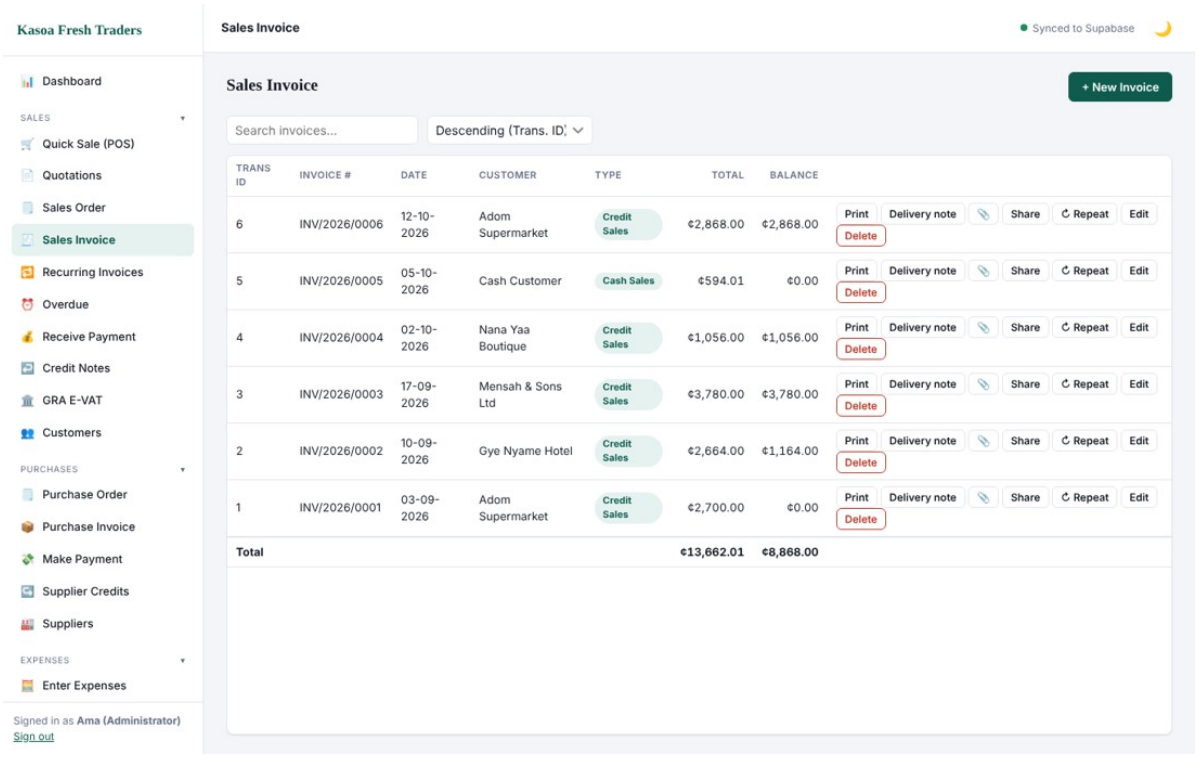

Product form

Tips: use short unique codes; keep names consistent so that searching is easy; set a re-order level if you want low-stock warnings.

6. Selling

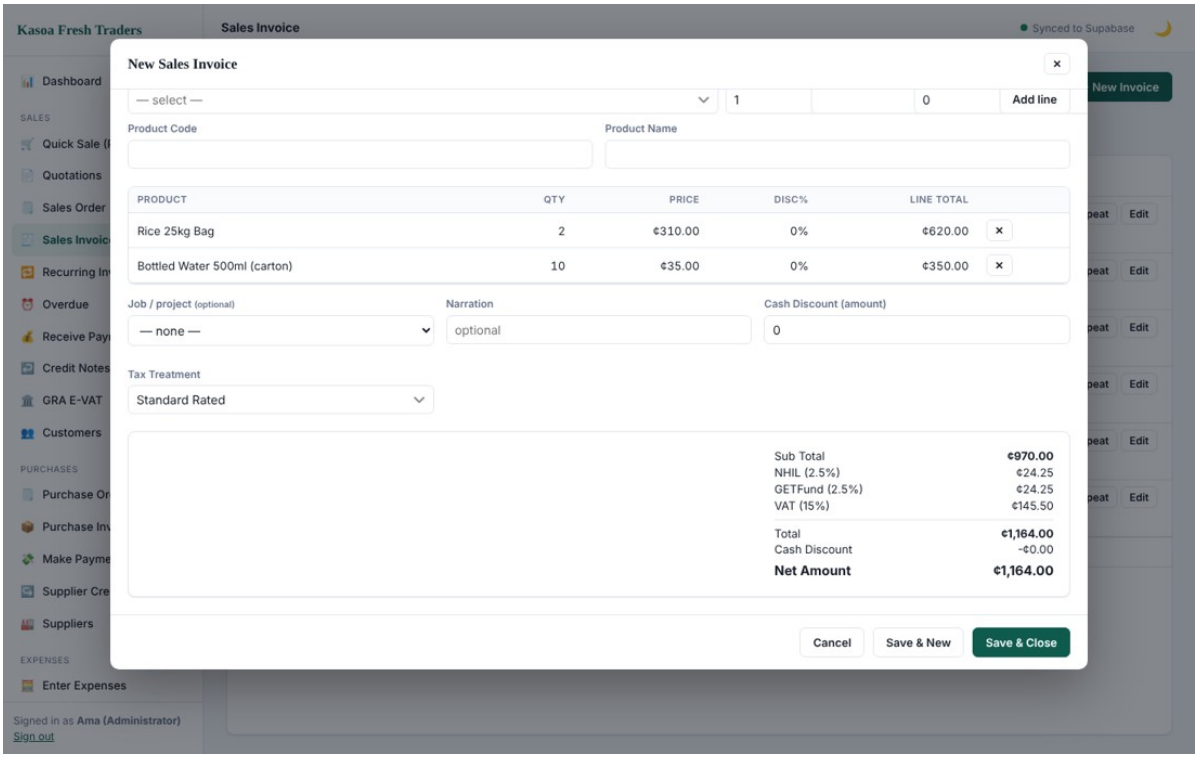

All sales are under the **Sales** group in the menu.

Sales Invoice list

6.1 Raising a sales invoice

1. Click **Sales Invoice**, then **New**.
2. Pick the customer. Date, terms and payment method come from your defaults.
3. Add lines: choose a product, enter quantity and price. The program fills the description and tax.
4. Add a discount if needed. VAT, NHIL, GetFund and COVID levy are calculated automatically from the product's tax setting.
5. Check the totals at the bottom, then **Save & Close** (or **Save & New** to continue).

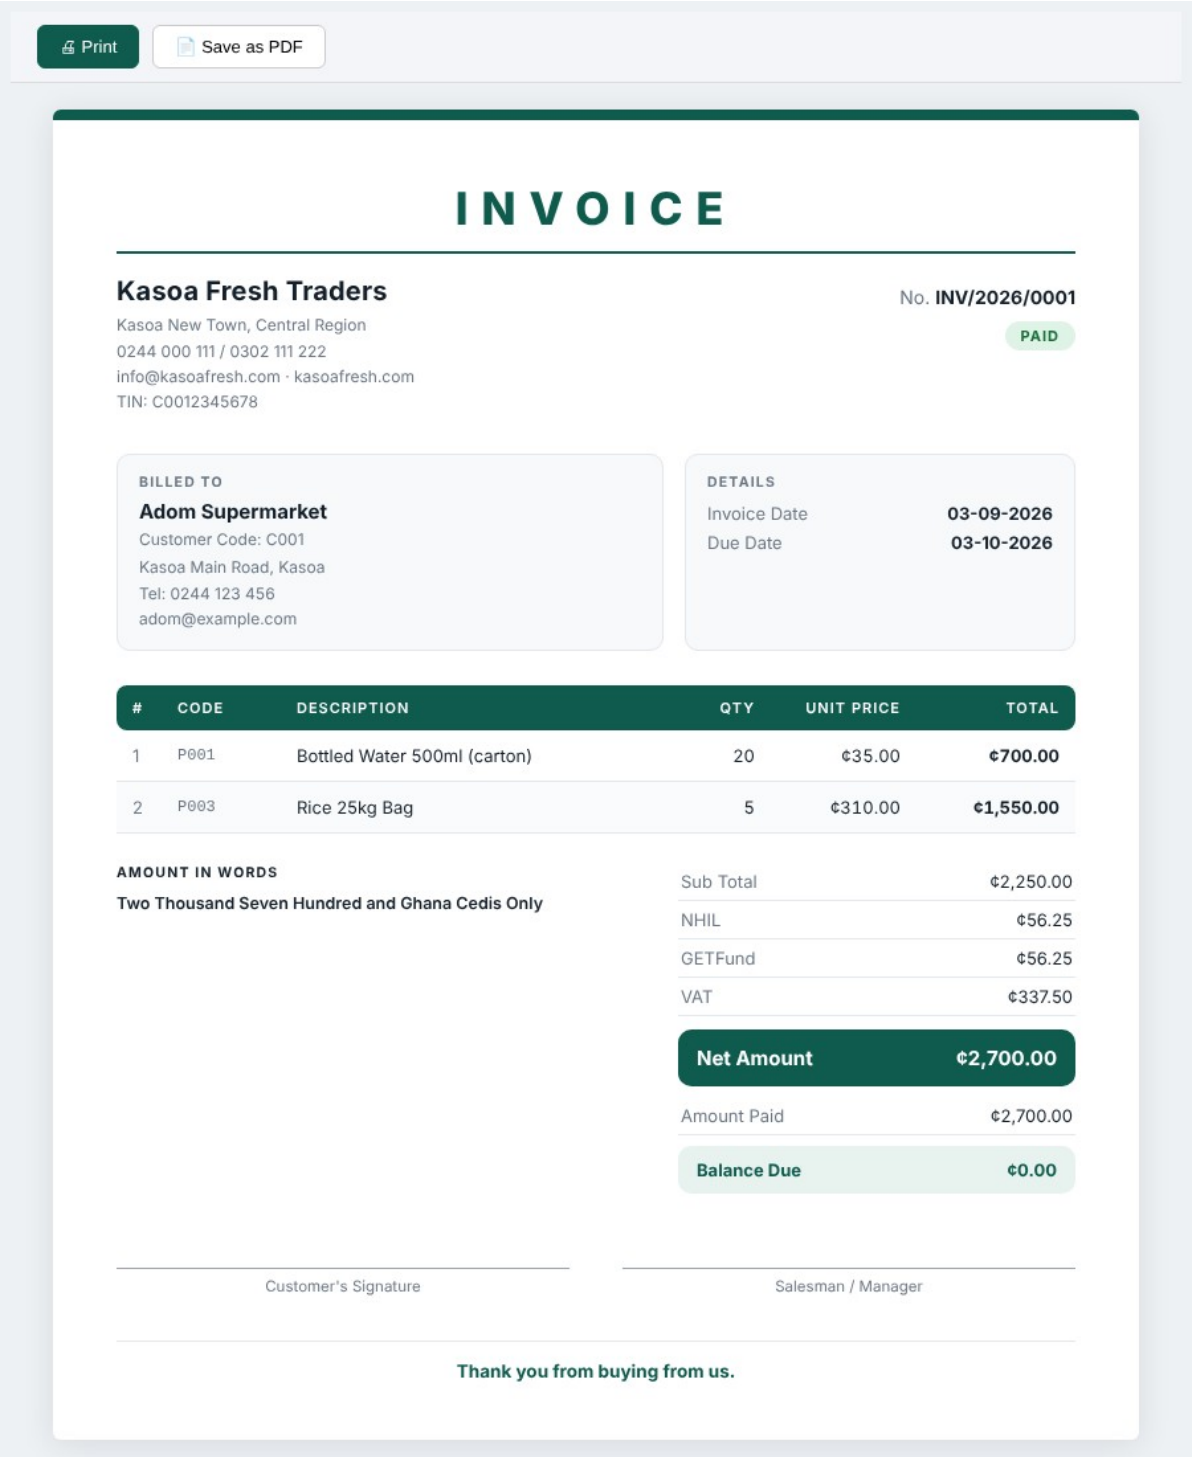

Sales form with totals

Saving posts the entries: debit Debtors (or cash/bank for a cash sale), credit Sales Income and the output tax accounts, and it reduces stock and records cost of sales.

6.2 Printing and sharing

Open the invoice and click **Print** or **Save as PDF**. Use **Share** to send it by email or WhatsApp.

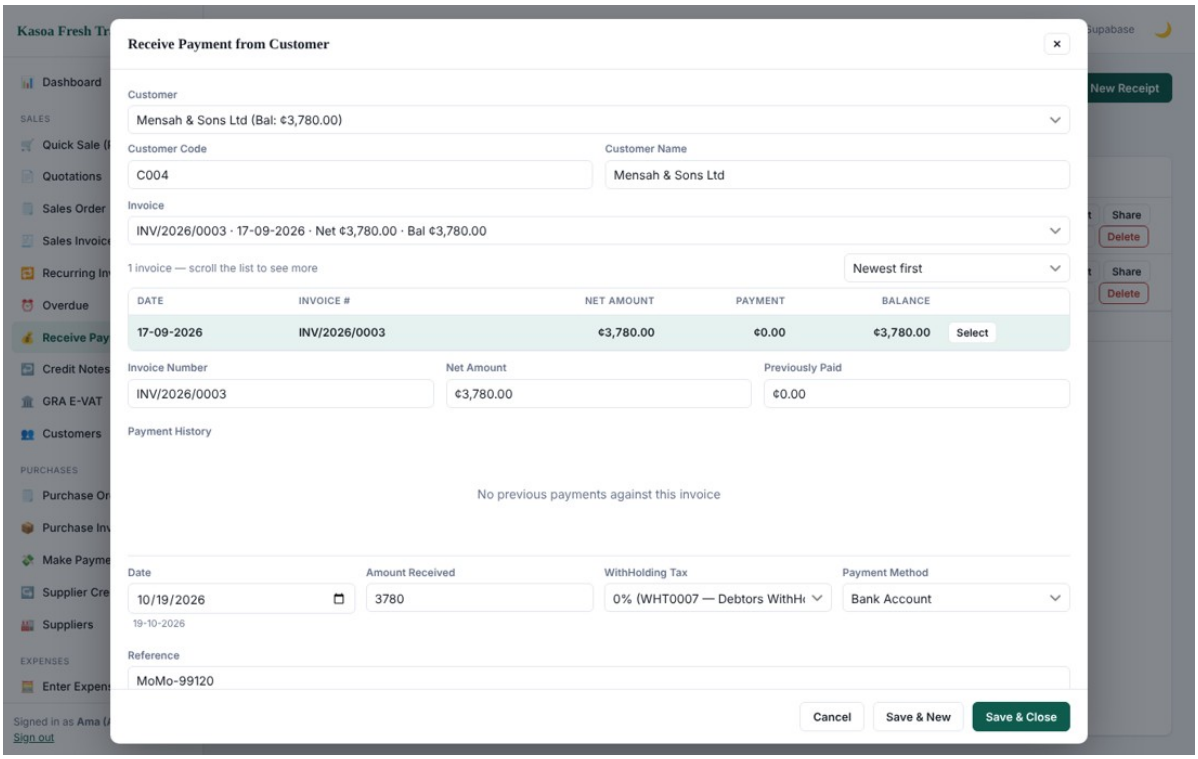

Printed invoice

6.3 Receiving payment

Open **Receive Payment**, choose the customer, pick the invoices being paid, enter the amount and the account it was paid into (cash, bank or mobile money), and save. Part payments are allowed. The invoice status changes to Part Paid or Paid.

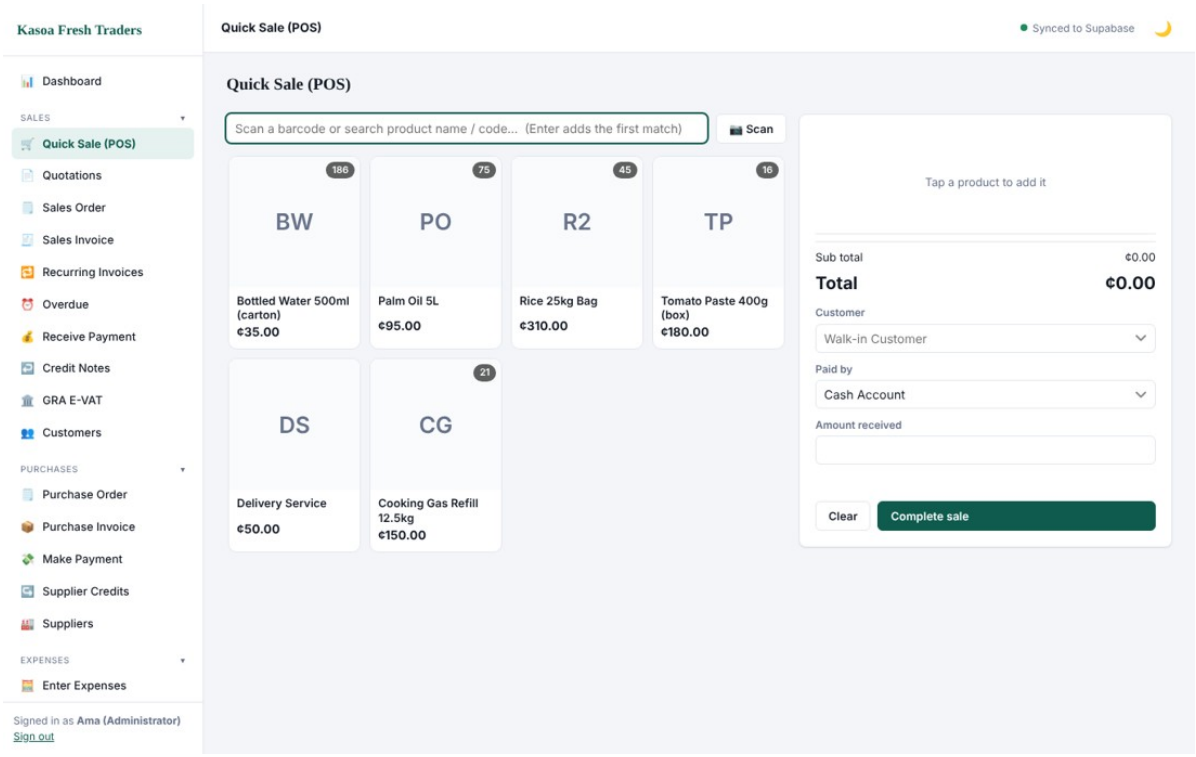

If a customer withholds tax from you, choose the rate in the **WithHolding Tax** list. The tax is worked out on the amount before VAT and levies, and the screen shows the figure.

Receive payment

6.4 Quick Sale (POS)

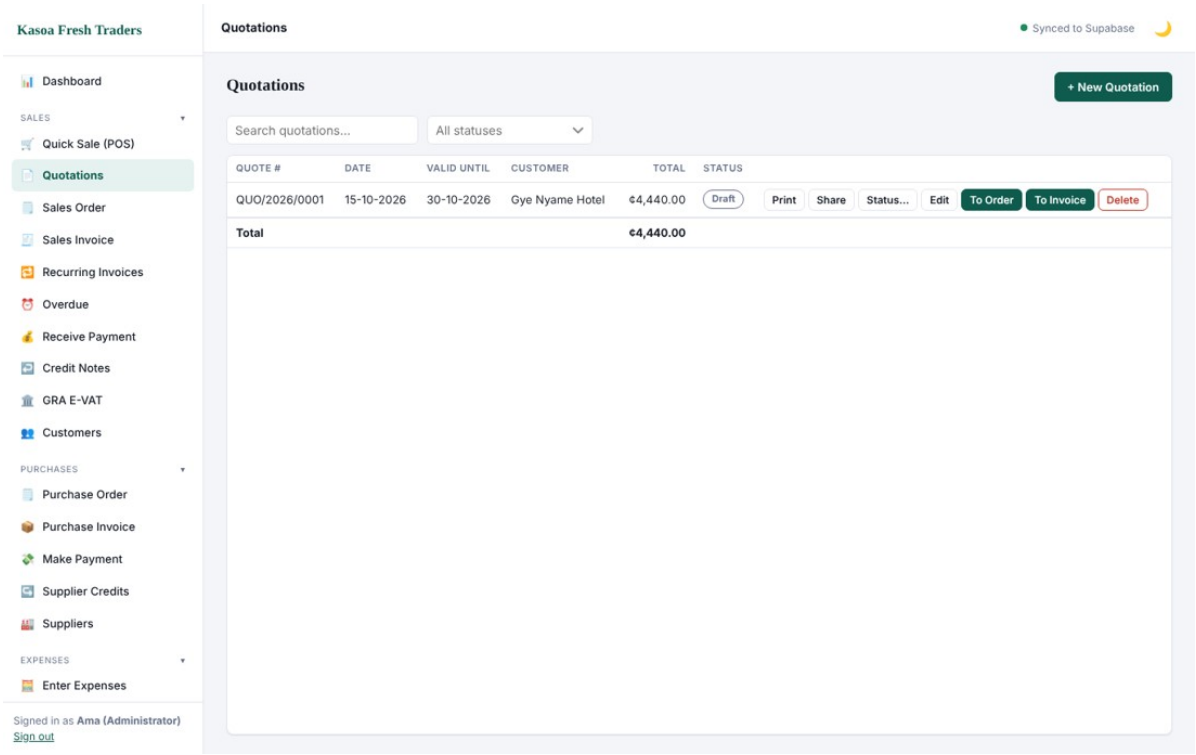

Use **Quick Sale (POS)** at the counter. Tap products to add them, choose the payment method and complete the sale. A receipt prints and stock reduces immediately. At the end of the day use the cash-up screen to count the till.

POS

6.5 Quotations and sales orders

A **Quotation** is an offer that posts nothing. A **Sales Order** records a confirmed order. Convert either into an invoice when the goods or services are delivered, so you do not retype lines.

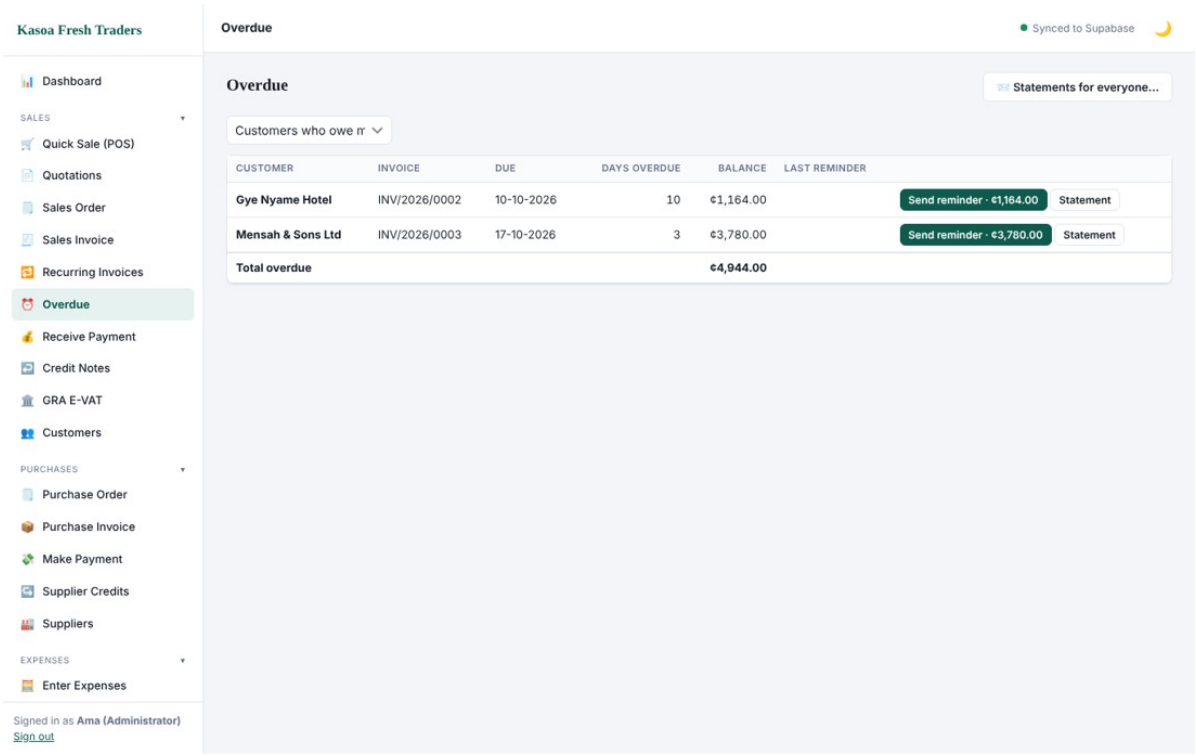

Quotations

6.6 Recurring invoices

For rent, retainers or subscriptions, create a **Recurring Invoice**: choose customer, lines and frequency (weekly, monthly, and so on). The program prepares the invoice on each due date for you to confirm.

6.7 Overdue invoices and credit control

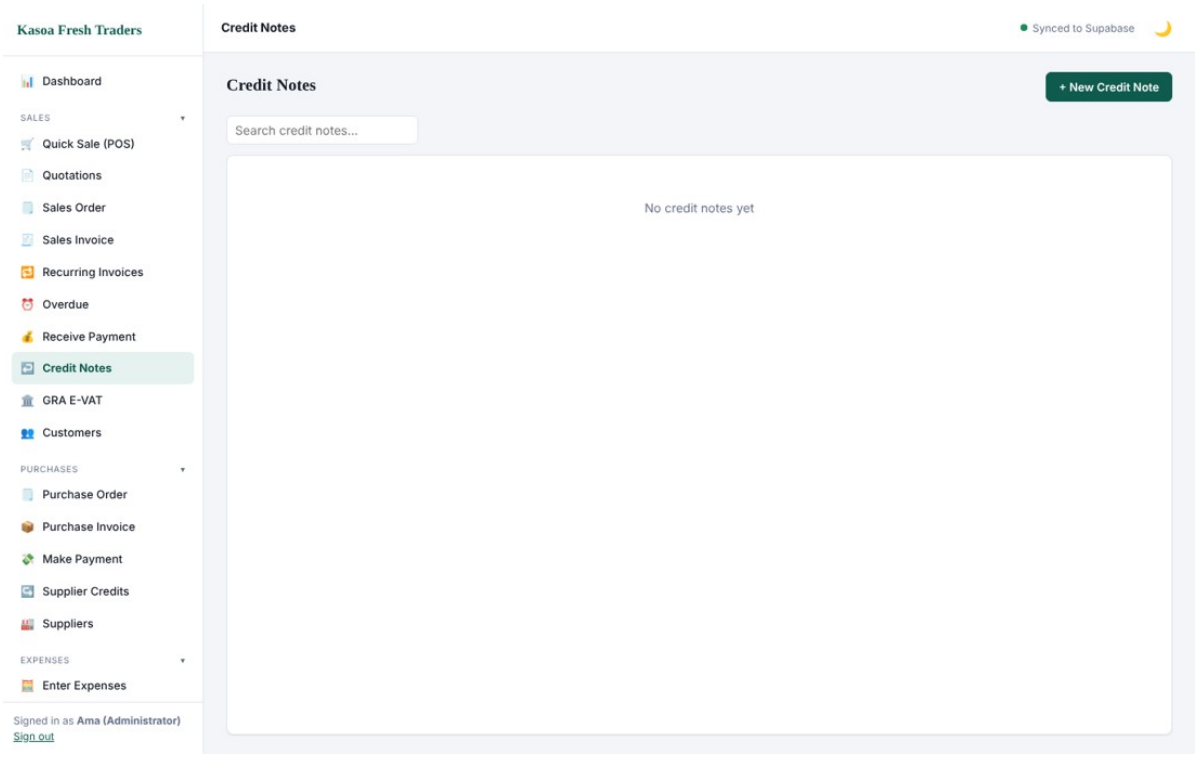

Overdue lists every unpaid invoice past its due date, oldest first, with days late. Use it every week to chase payments. If a customer has an overdue invoice the program warns you before a new sale, and a user with the right can override.

Overdue

6.8 Credit notes

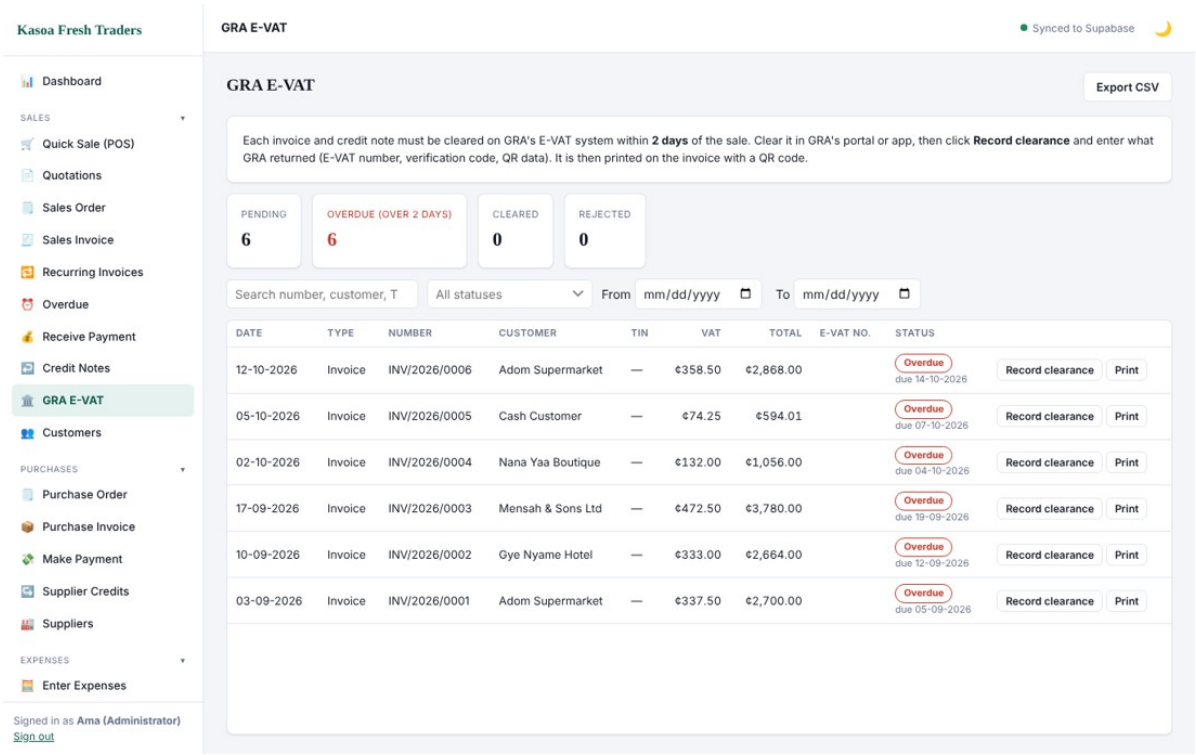

When a customer returns goods or is overcharged, raise a **Credit Note** against the invoice. It reduces what they owe, returns stock where applicable and reverses tax. Never edit a posted invoice to do this.

Credit notes

6.9 GRA E-VAT

If your business is registered for E-VAT, open **GRA E-VAT** to see invoices ready to send and their submission status. Keep your TIN correct in Company Information.

6.10 Customer deposits

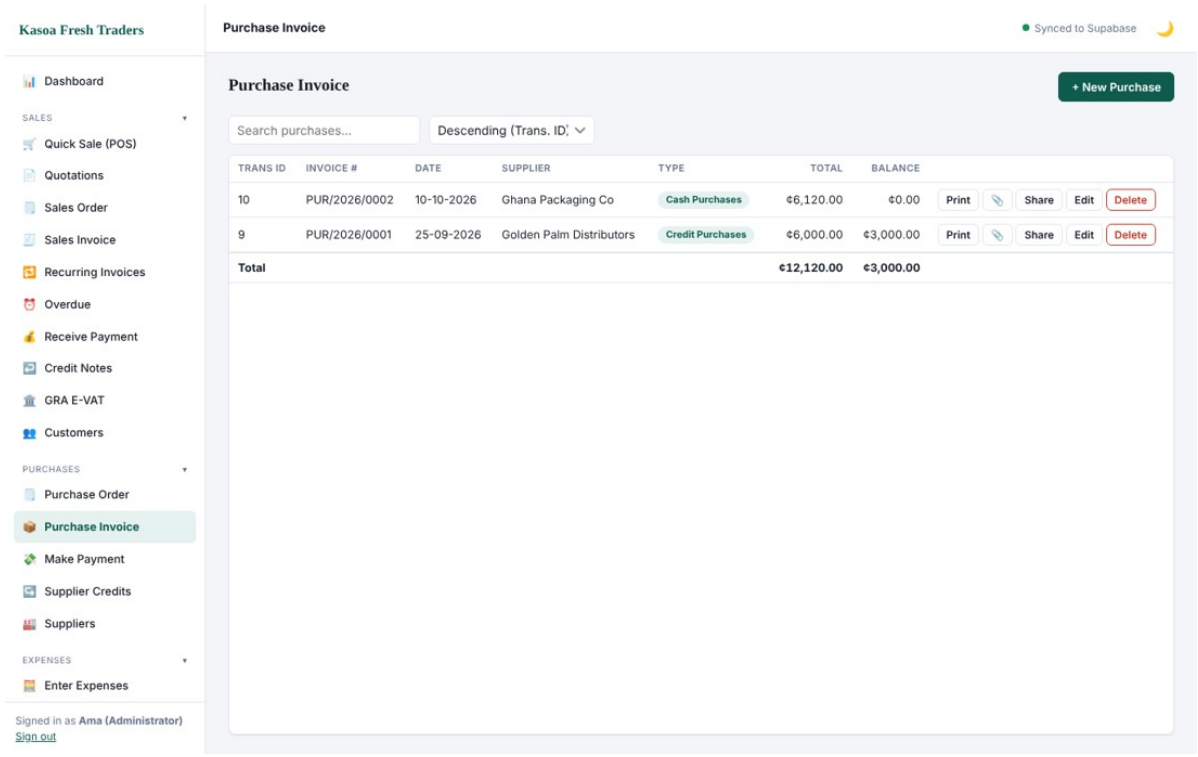

Use **Customer Deposits** under Sales when a customer pays before you invoice. The money is kept as a liability (the Customer Deposits account is created the first time you use it). When you raise the invoice, apply the deposit to it, or refund what is left.

7. Buying and expenses

7.1 Purchase orders

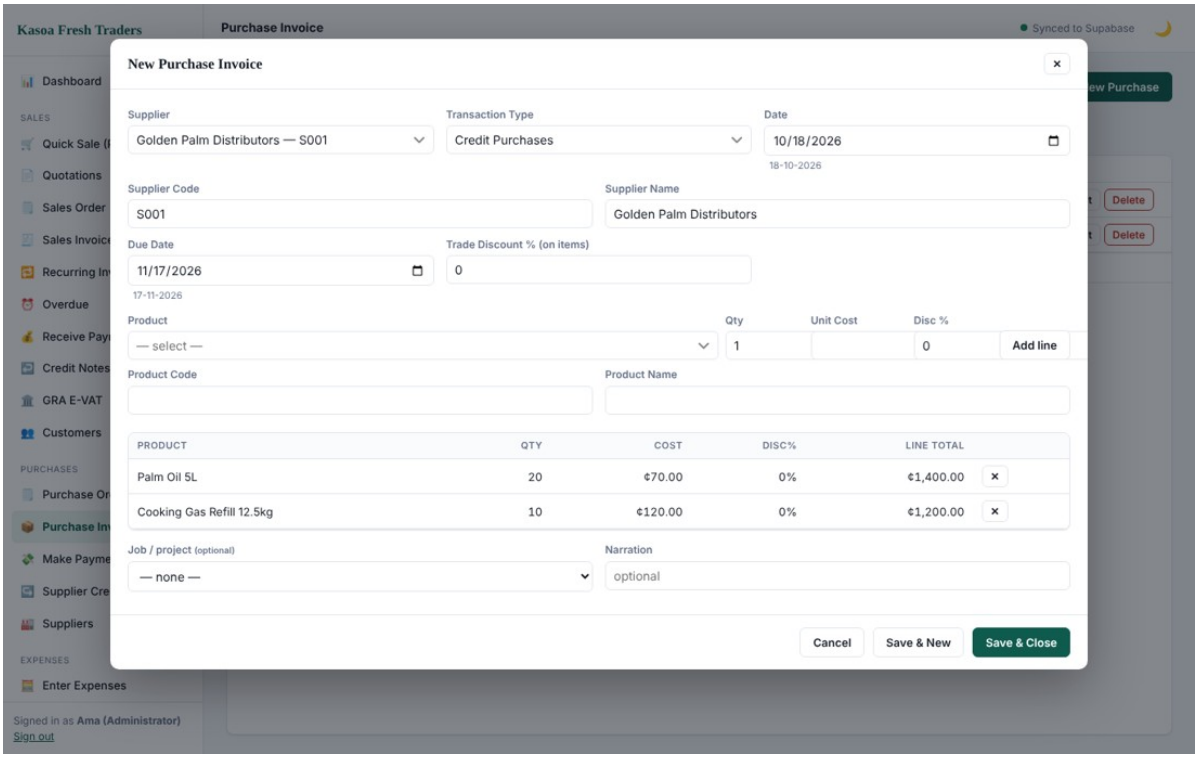

A **Purchase Order** tells a supplier what you want to buy. It posts nothing. When goods arrive, convert it into a purchase invoice.

7.2 Purchase invoices

Purchase invoice list

1. Open **Purchase Invoice**, then **New**.
2. Choose the supplier and the transaction type: **Credit Purchases** (you will pay later) or **Cash Purchases** (paid now, choose the payment account).
3. Enter the supplier's invoice number exactly as printed on their invoice.
4. Add product lines with quantity and cost, plus any input tax.
5. Save.

Purchase form

Stock increases and the latest cost updates. For a credit purchase the supplier's balance (Creditors) goes up.

7.3 Paying suppliers

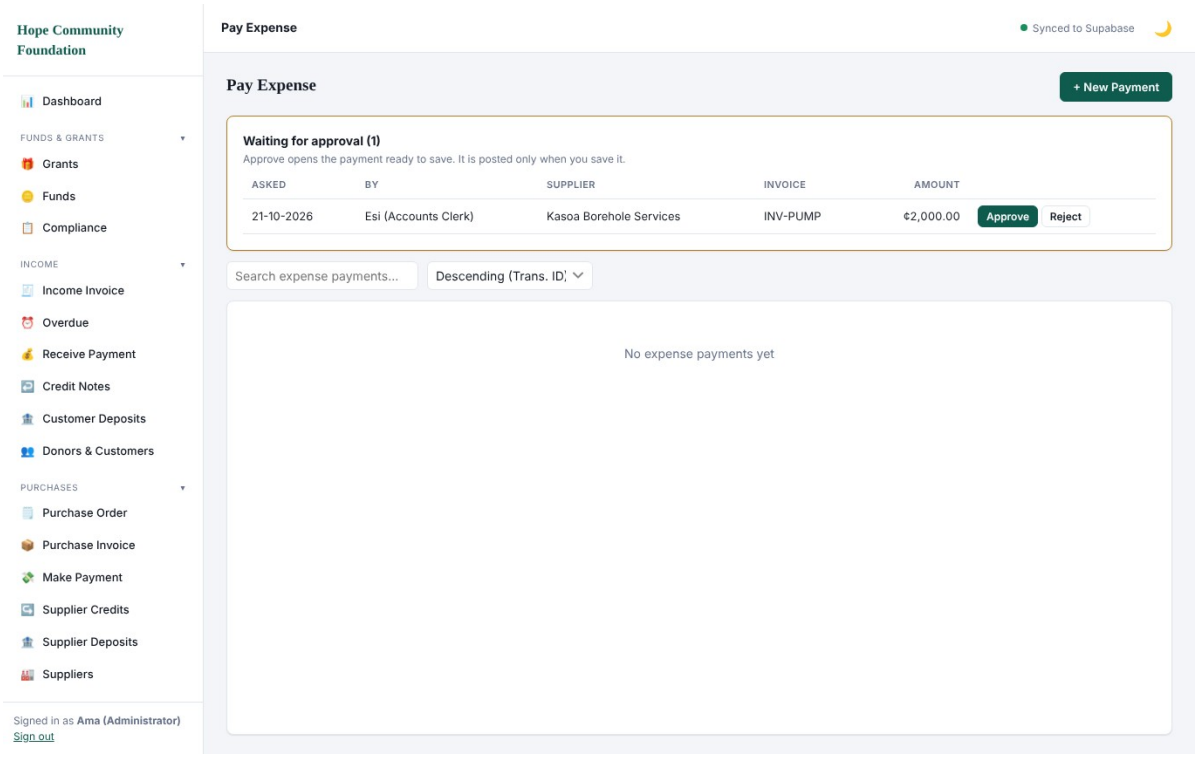

Open **Make Payment**, choose the supplier, tick the invoices you are paying, enter the amount, payment method and account, and save. Withholding tax is worked out for you from the supplier's kind of supply; see section 7.8. It is recorded for the WHT register (section 10).

Make payment

The invoice list shows invoices with a balance first. Use the filter to show fully paid invoices or all of them.

If your administrator has set a payment approval limit (section 3.2), a payment at or above that amount made by someone without Full rights is not posted. It is sent for approval and appears in a **Waiting for approval** box above the list. A user with Full rights clicks **Approve**, which opens the payment ready to save; it is posted only when they save it. **Reject** cancels the request, and the person who asked can **Withdraw** it. The same applies to Pay Expense.

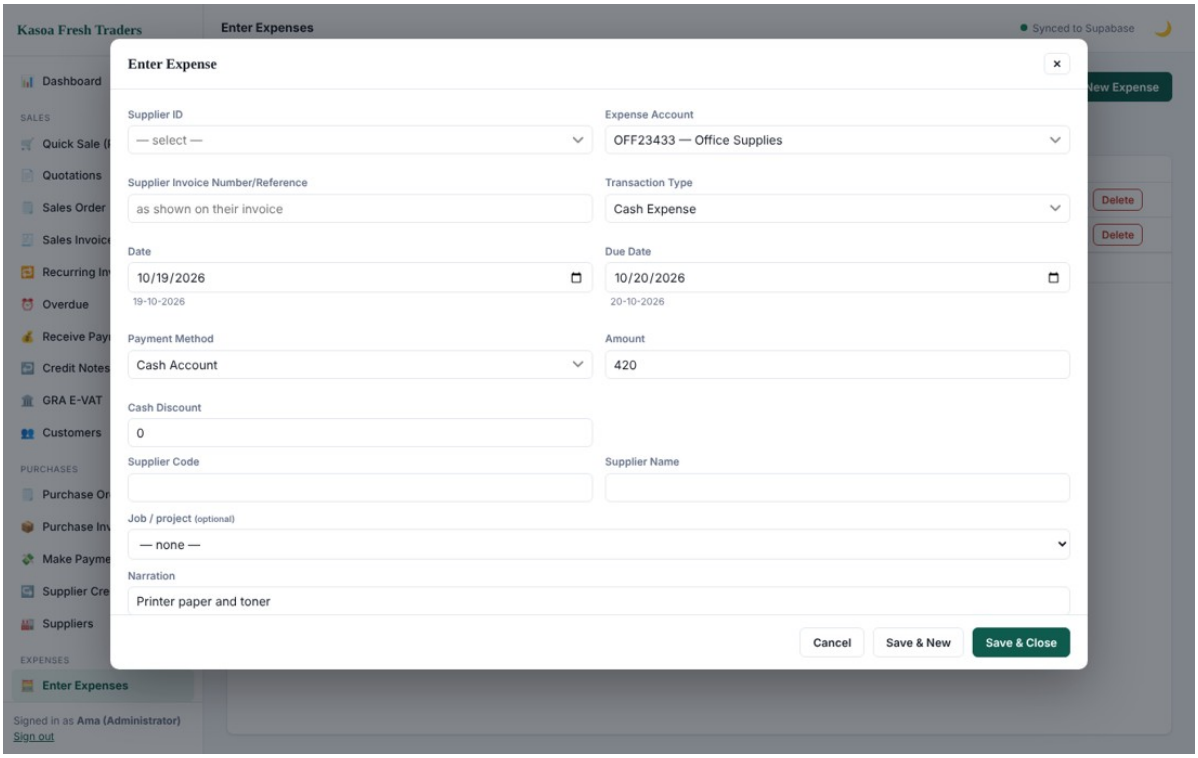

Pay Expense with a payment waiting for approval

7.4 Supplier credits

Use **Supplier Credits** when you return goods or the supplier gives a discount after invoicing. It reduces what you owe.

7.5 Expenses

Use **Enter Expenses** for costs that are not stock: rent, fuel, salaries paid outside payroll, airtime, repairs and so on.

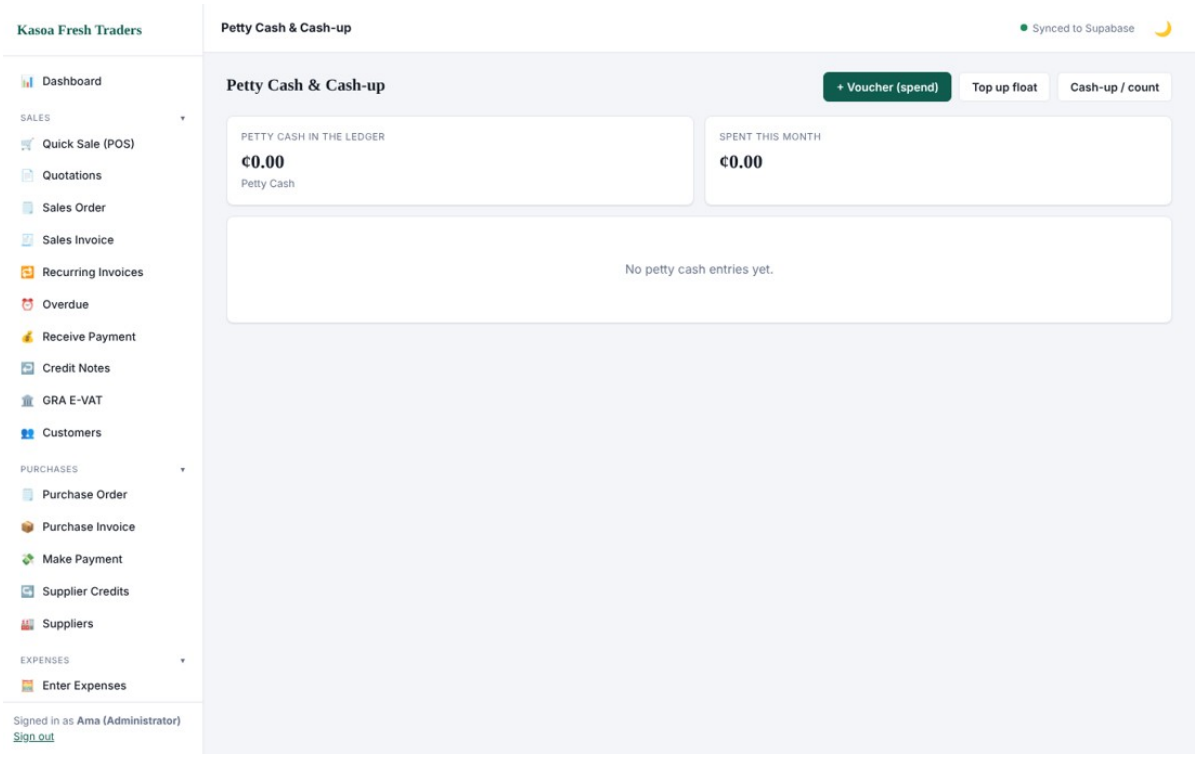

Expense form

1. Open **Enter Expenses** and click **New**.
2. Choose the **Supplier**, the **Expense Account** (for example Administration Costs) and the **Transaction type**: Cash Expense (paid now) or a credit expense.
3. Enter the supplier invoice or reference number, date and due date.
4. For a cash expense choose the payment method and account.
5. Enter the amount and a narration, then save.

A credit expense is later paid with **Pay Expense** so that it clears from the supplier's balance.

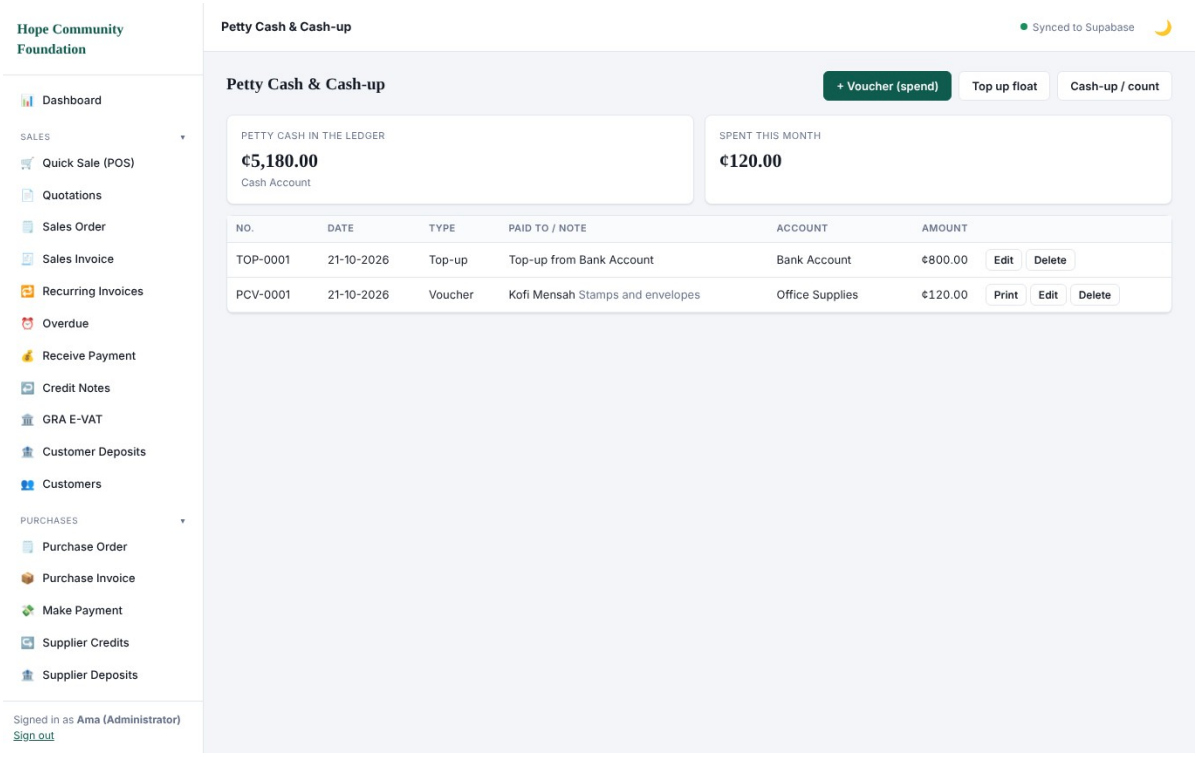

7.6 Petty cash

Use the petty cash screens to record the float, spend from it and top it up. The balance always equals the cash in the box.

Petty cash

Click **Edit** on a voucher or a top-up to correct it; its ledger entries are posted again and the cash balance is checked. A cash-up count cannot be edited, but an administrator can delete it. The voucher form has **Save & New** for entering several vouchers in a row.

Petty cash list with Edit buttons

7.7 Supplier deposits

Use **Supplier Deposits** under Purchases when you pay a supplier in advance. The money is kept as an asset (the Supplier Deposits account is created the first time you use it). When the supplier's invoice arrives, apply the deposit to it, or record a refund if the supplier returns the money.

7.8 Withholding tax on supplier payments

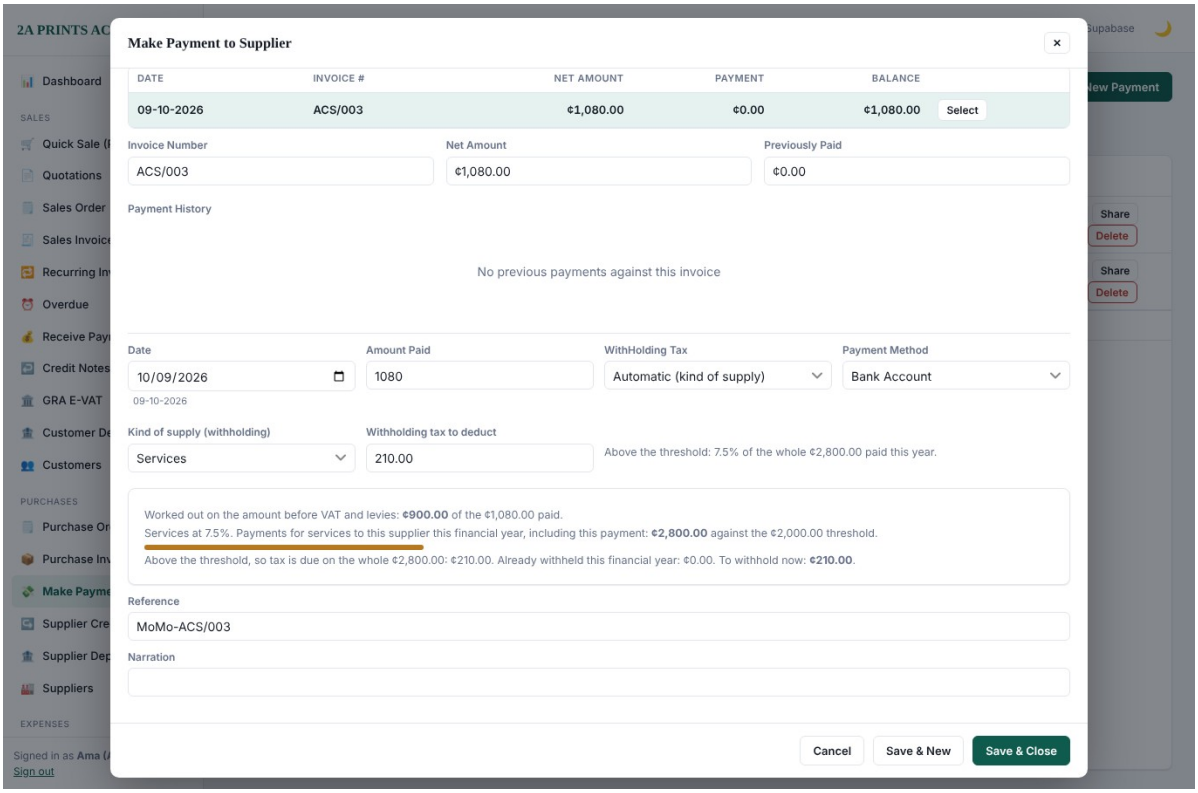

Make Payment and Pay Expense work out Ghana withholding tax for you. The rules are kept on the supplier and in Admin, and every figure can be checked on the payment screen.

Set up once. On each supplier (section 5.2) choose Resident or Non-resident, and what they supply: Goods (3%), Works (5%), Services (7.5%) or Not subject. In Admin, Accounts Settings and Defaults (section 3.3), the Withholding tax rules panel holds the yearly threshold (GHS 2,000), the three rates, the non-resident rate (20%), and whether the threshold is tested separately for goods, works and services or on all supplies together.

How it is worked out.

- Tax is worked out on the amount **before VAT and levies**, not on the amount paid.
- For a resident supplier nothing is withheld until the payments for the same kind of supply, in the financial year, go above the threshold. A total of GHS 2,000 or less is exempt.
- The payment that takes the total above the threshold is taxed on the **whole** year-to-date amount. Later payments are taxed at the flat rate. What was already withheld is taken off, so the figures always add up.
- A non-resident supplier is taxed at the non-resident rate from the first cedi.
- The financial year is the Accounting Period in Admin, General Settings (January to December if it is not set). The totals start again each year.

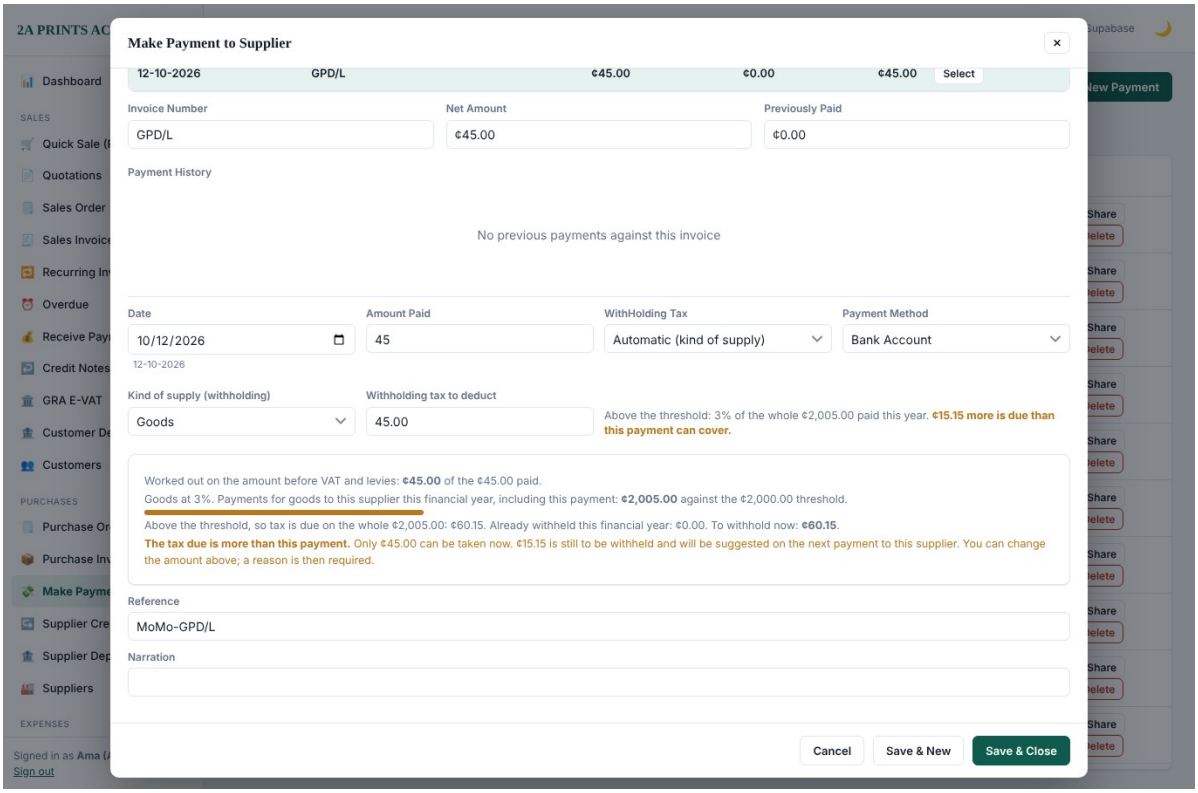

Example (services, 7.5%). Three payments to the same supplier, before VAT: GHS 1,000, then 900, then 900. The first two are below GHS 2,000, so nothing is withheld. The third brings the total to GHS 2,800, so the tax is 7.5% of 2,800 = GHS 210, which is taken from that payment. A fourth payment of GHS 500 is taxed at 7.5% = GHS 37.50.

Make Payment where the threshold has been passed

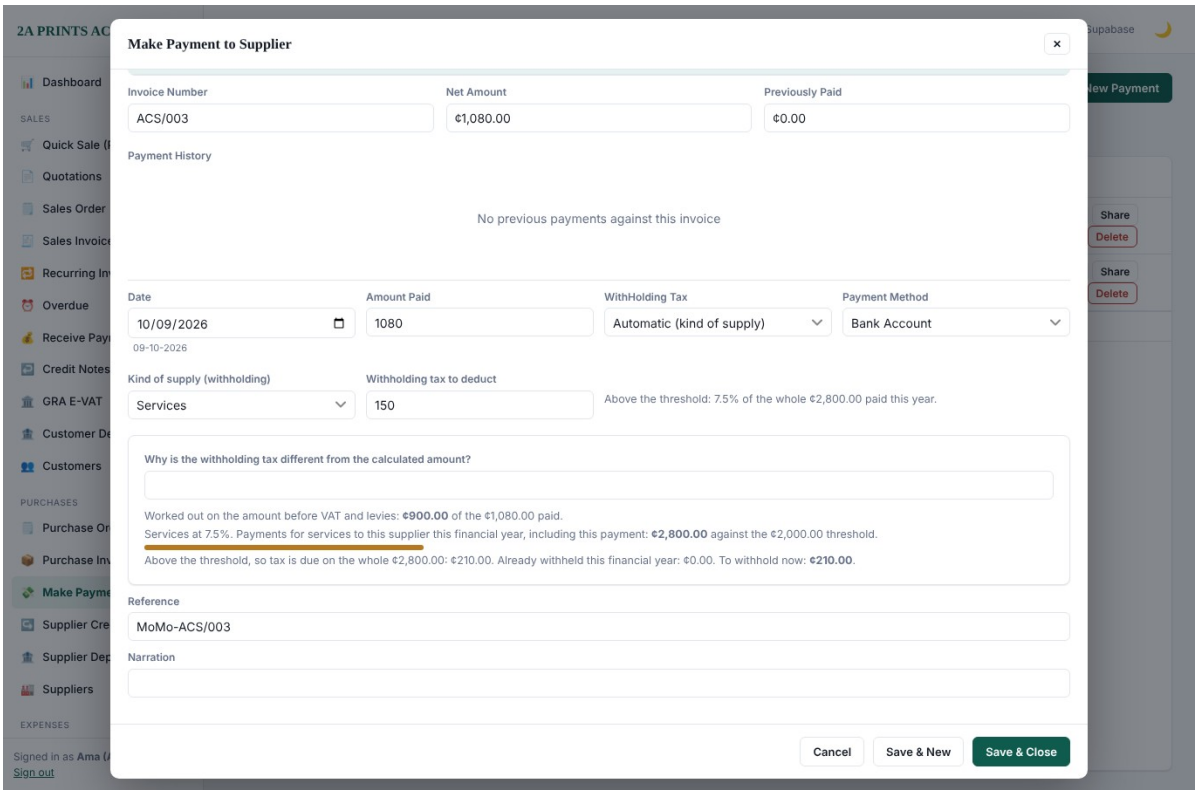

On the payment screen. The kind of supply and the amount to deduct sit beside the amount paid, with a one-line explanation. The box below shows the year-to-date total against the threshold, the tax due and what was already withheld. Instead of Automatic you can pick a fixed rate in the **WithHolding Tax** list, for example 8% for residential rent, 10% for commission, or 15% for commercial rent or royalties. A fixed rate is also worked out on the amount before VAT.

When the tax is more than the payment. If a small payment pushes the total over the threshold, the tax due can be more than the payment itself. The program deducts only what the payment can cover, shows a warning, and keeps the rest as still to be withheld. It is suggested again on the next payment to that supplier. This is the program's own cautious rule, because the tax rules do not say what to do in this case. Ask GRA or your tax adviser if you need a different treatment.

A payment where the tax due is more than the payment

Changing the amount. You may type a different amount, for example when you settle a shortfall another way. The program then asks for a reason, which is saved with the payment and shows in the audit log.

Reason asked when the amount is changed

Tracking. The WHT Threshold Tracker report (section 10.5) lists each supplier's payments against the threshold. The WHT Register shows the base and the tax for every payment, and a Certificate can be printed for each one.

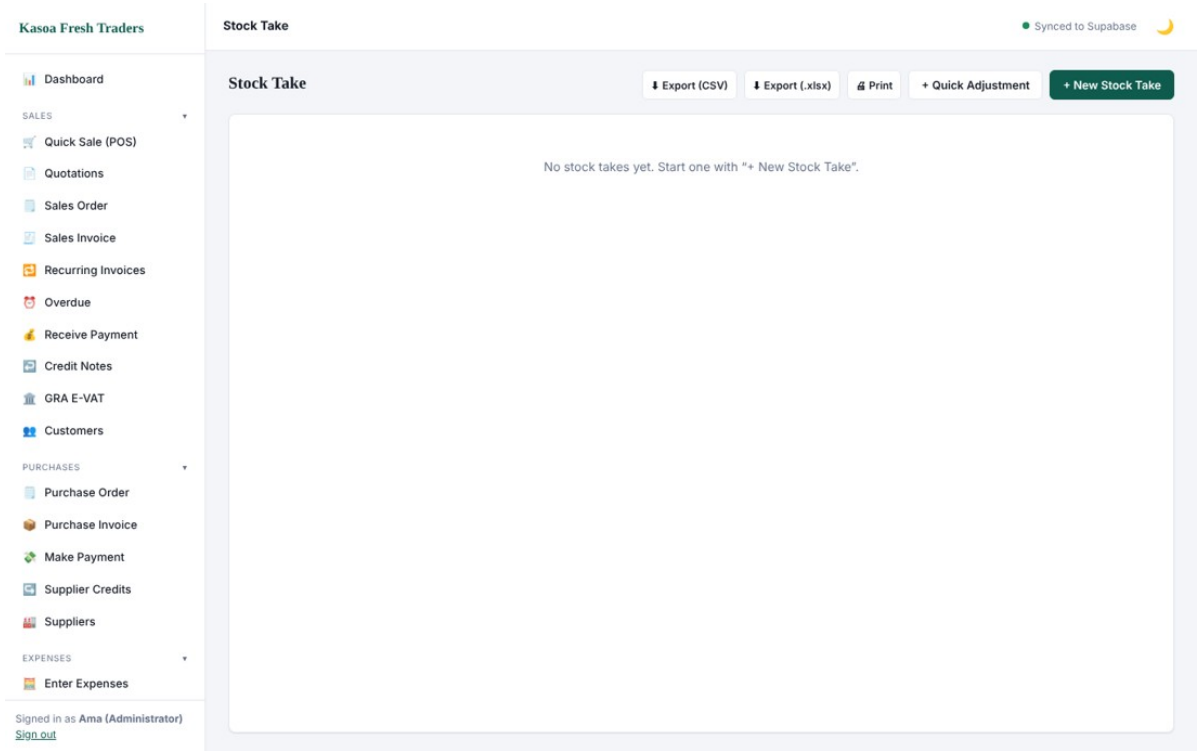

Good to know. Withholding is worked out on payments made through Make Payment and Pay Expense, and also on Cash Purchases and Cash Expenses. When the transaction type is Cash, the same withholding box appears on the purchase or expense form, and the tax is taken from the cash paid (the bank or cash account is credited with the amount less the tax). Credit purchases and credit expenses are taxed when you pay them. Cash purchases and expenses count in the supplier's yearly total together with the payments. Those saved before version 2.1.3 are not counted, and payments recorded before 2.1.3 count at the amount paid. The rules follow the GRA Practice Note on Withholding of Tax. Rates and the threshold change with the law, so check them with GRA.

8. Stock

Stock is valued at weighted average cost and updates automatically when you post purchases, sales, credit notes and adjustments.

8.1 Stock take

Count physical stock and compare it with the system.

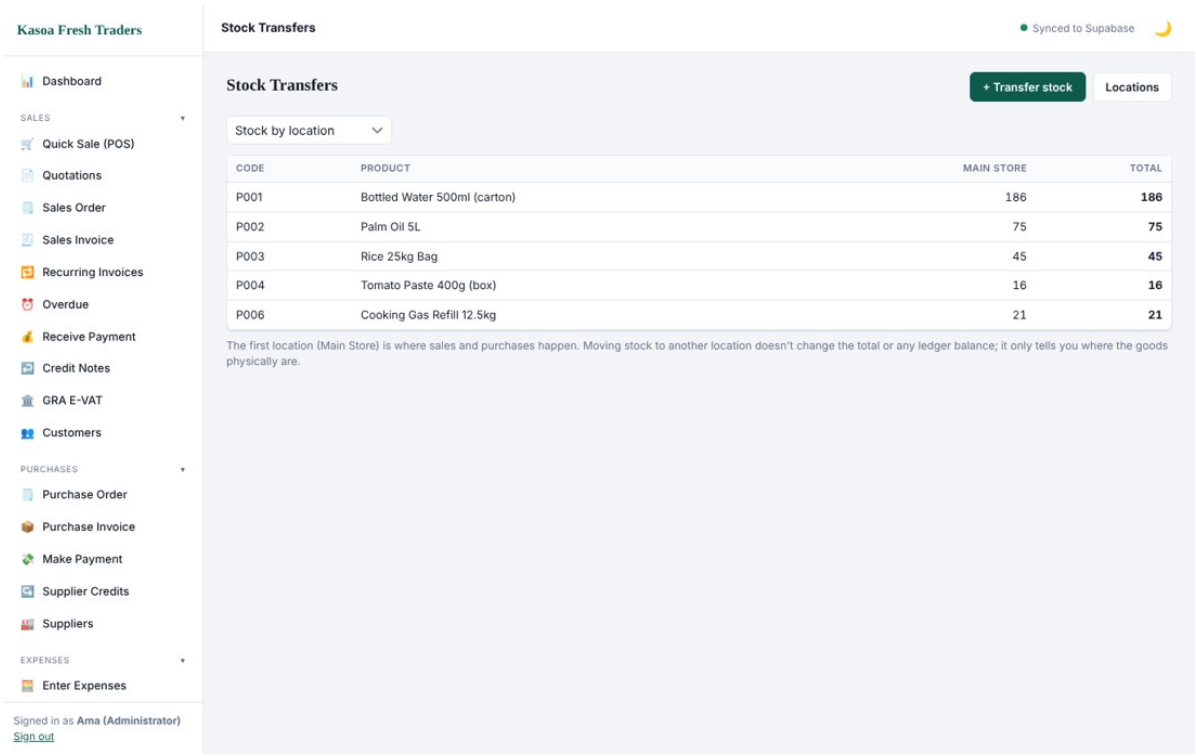

Stock take

1. Open **Stock Take** and start a new one.
2. Enter the counted quantity for each product.
3. Review the differences. A positive difference is a gain, a negative one a loss.
4. Post the take to adjust quantities and book the gain or loss.

Use **Quick Adjust** for a single product (damaged or expired goods, for example).

8.2 Transfers

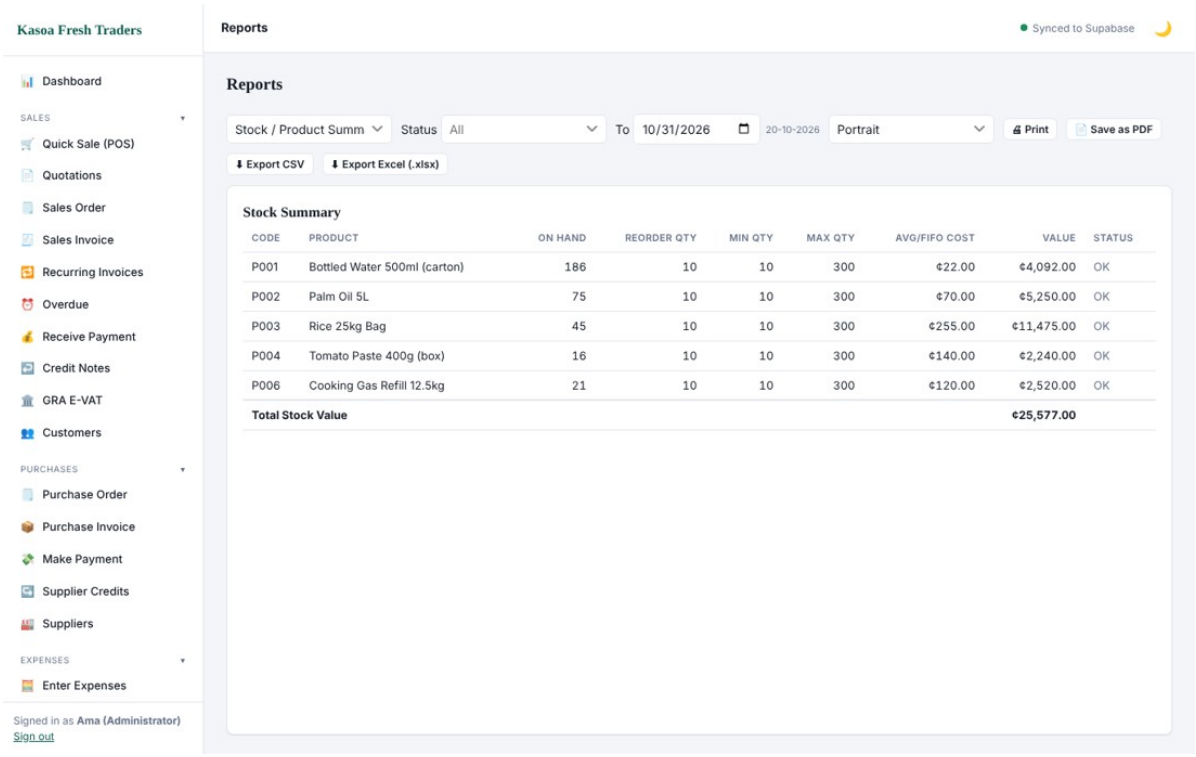

Move stock between stores or branches without changing its value.

Transfers

8.3 Stock reports

The Stock Summary report shows quantity and value per product. Use it to check your Inventory account in the Trial Balance: the two should agree. See section 10.

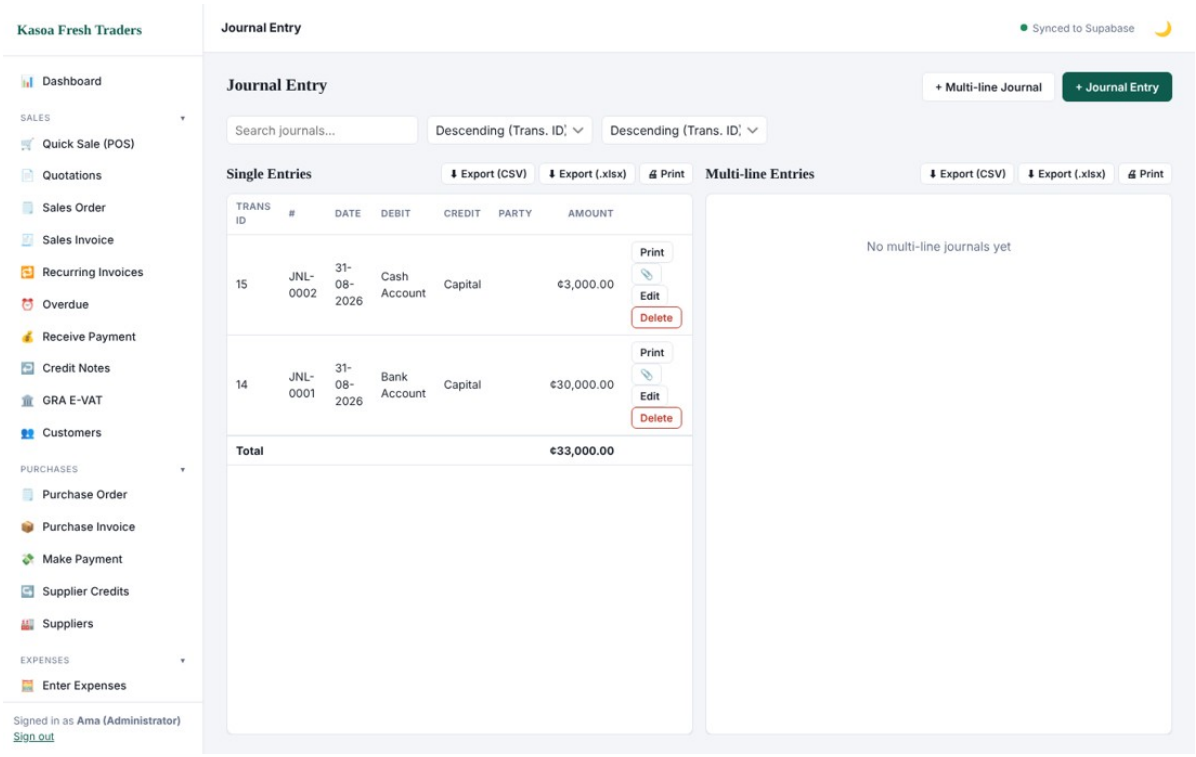

Stock summary

9. Banking, journals, ledger, fixed assets and month-end

9.1 Journals

A journal moves value between accounts directly. Use it for opening balances, capital introduced, corrections and year-end adjustments.

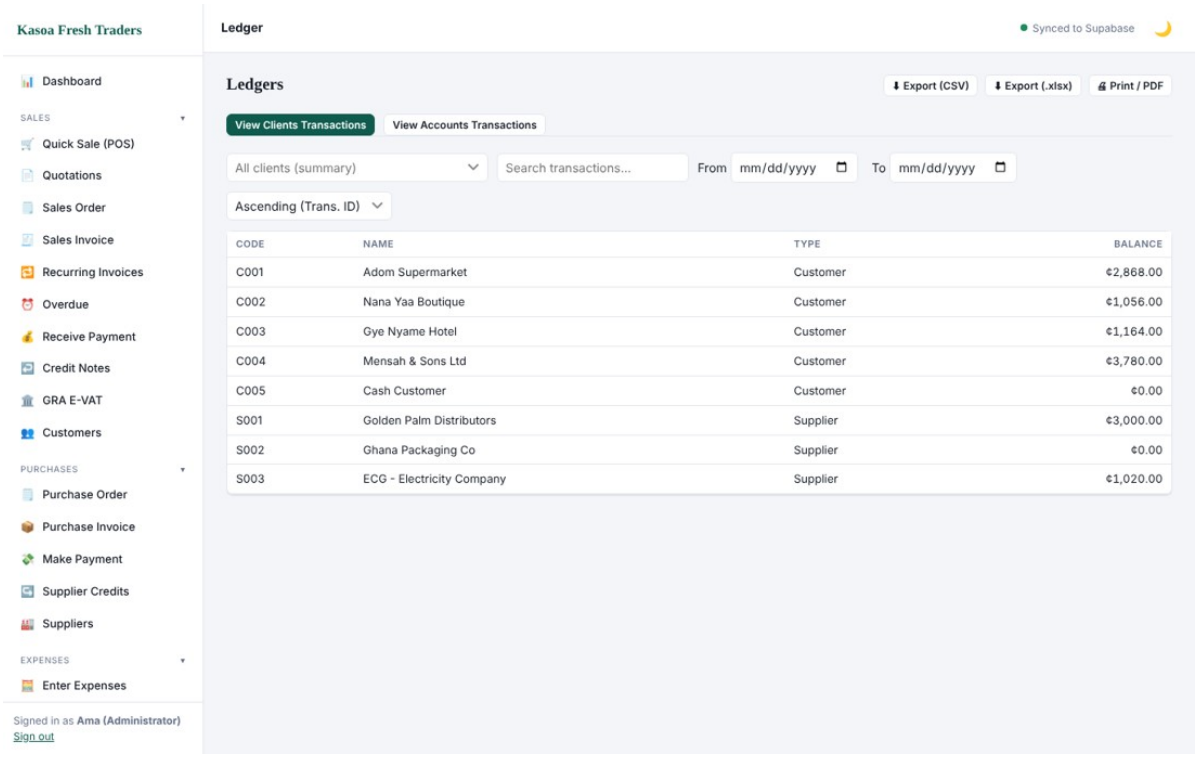

Journal entry

1. Open **Journal Entry**.
2. For a simple journal choose the account to debit, the account to credit, the amount and a narration. For a multi-line journal use the multiple journal form.
3. The total debits must equal the total credits. Save.

9.2 The ledger

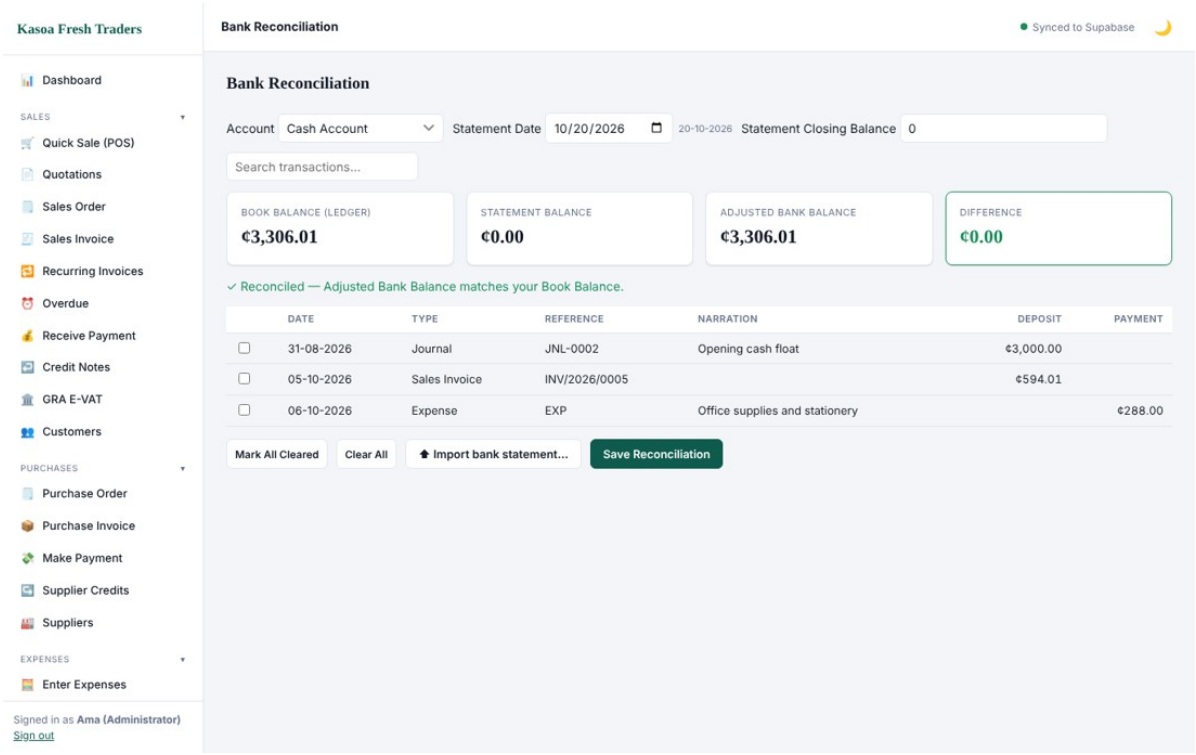

Open the **Ledger** to see the entries of any account in date order with a running balance. Click a line to open the source transaction.

Ledger

9.3 Bank reconciliation

Reconcile each bank account monthly against the bank statement.

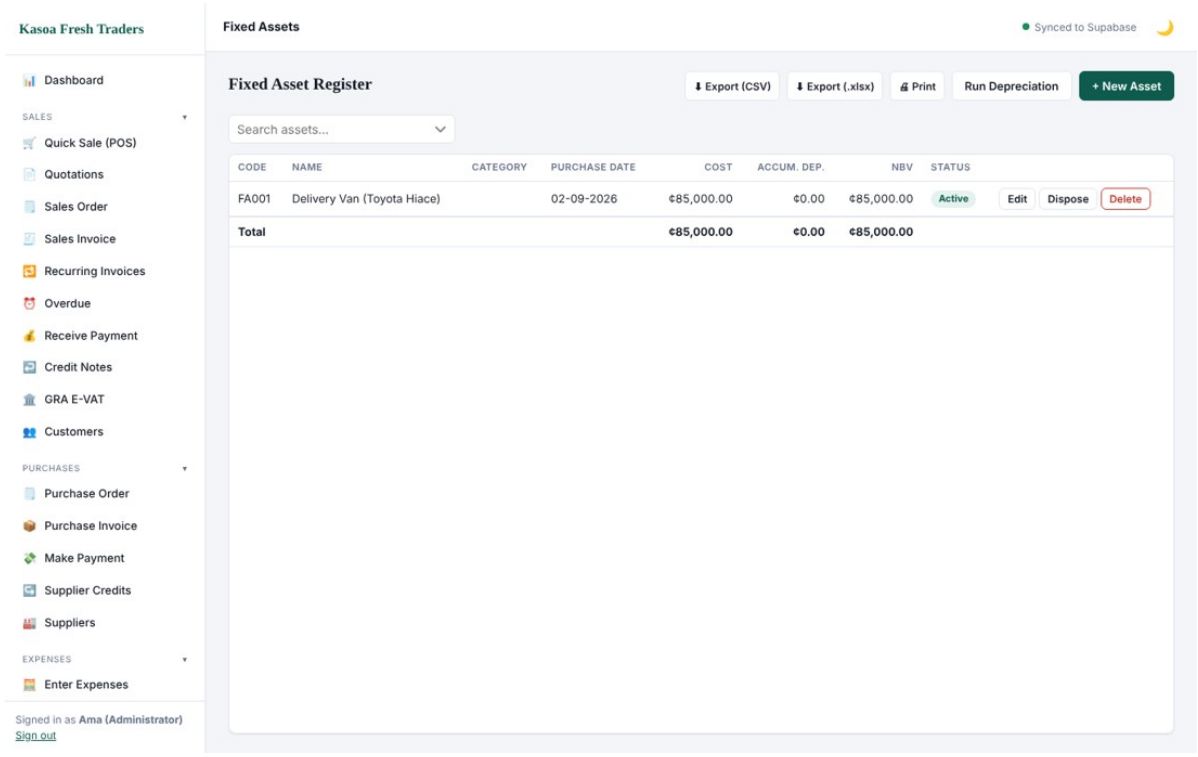

Bank reconciliation

1. Open **Bank Reconciliation** and choose the account and statement date.
2. Enter the statement closing balance.
3. Tick every line that appears on the bank statement.
4. When the difference is zero, save the reconciliation.

Items you have not ticked are outstanding (cheques not yet cashed, deposits in transit). Statement lines can be imported from a file to save ticking.

9.4 Fixed assets and depreciation

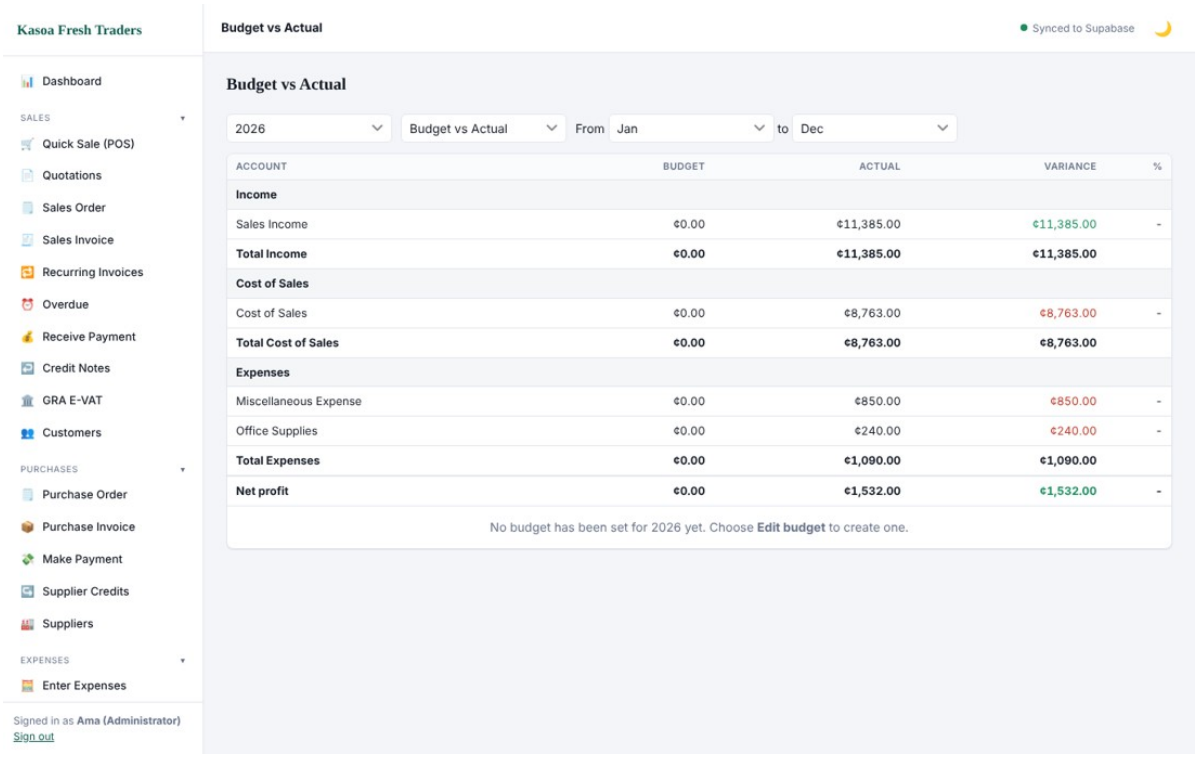

Fixed assets

Register each asset with its cost, date, depreciation method and rate. Run depreciation for the period; the program posts the depreciation expense and accumulated depreciation. Record disposals when an asset is sold or scrapped.

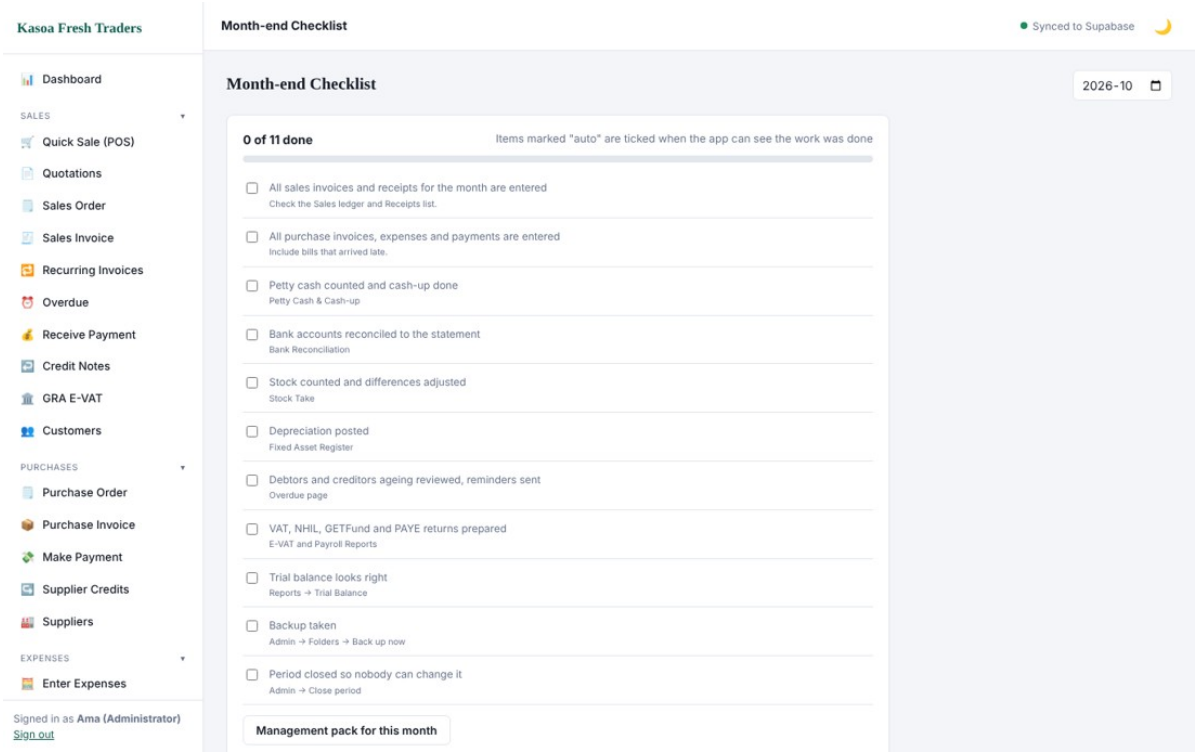

9.5 Budgets

Set a budget per account and period, then compare it with actuals.

Budget

9.6 Month-end checklist

Month end

1. Post every invoice, receipt, payment and expense for the month.

2. Reconcile every bank and mobile-money account.
3. Count petty cash and stock where needed.
4. Run depreciation and any accrual or prepayment journals.
5. Print the Trial Balance and check that it balances.
6. Review VAT and the monthly GRA returns (section 10).
7. Close the period in **Admin / Settings, General Settings, Month End / Year End Closure**. After this, nobody can post to dates on or before the closing date.

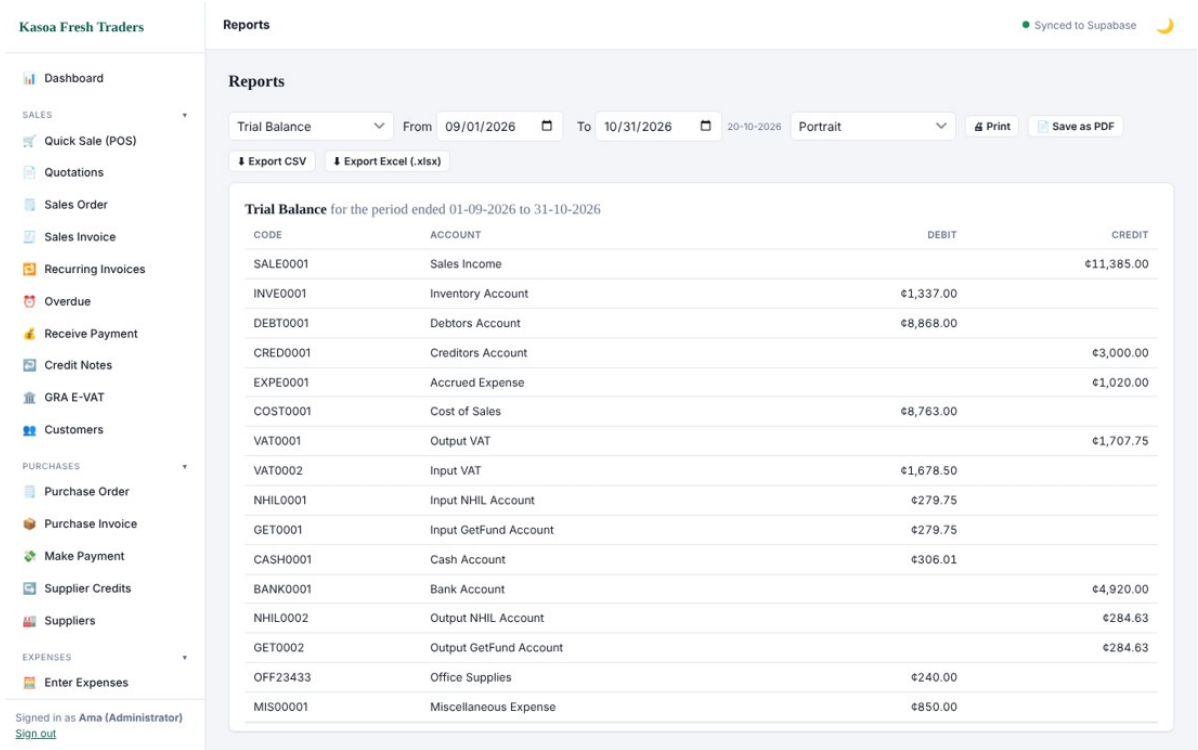

At year end close the final month the same way. Profit and Loss and Retained Earnings continue to calculate from the ledger.

10. Reports

Open **Reports** from the menu. Choose a report from the list at the top, set the **From** and **To** dates, and choose Portrait or Landscape. Every report can be printed, saved as PDF, or exported to CSV or Excel (.xlsx).

Report	What it tells you	Use it for
Trial Balance	Debit and credit balance of every account	Checking the books balance before reporting
Profit & Loss	Income less cost of sales and expenses	Whether you made a profit
Balance Sheet	Assets, liabilities and equity at a date	Your financial position
Cash Flow	Cash in and out by source	Why cash changed
VAT Reconciliation	Output tax less input tax	Preparing the VAT return
GRA Monthly Returns	Totals formatted for monthly GRA filing	PAYE, SSNIT, WHT and VAT filing
WHT Register	Withholding tax deducted from payments	Remitting to GRA
Aged Debtors / Creditors	Who owes you and whom you owe, by age	Collections and payment planning
Customer Sales, Expenses History	Sales per customer, spending per account	Analysis
Stock Summary	Quantity and value per product	Stock control
Tax Estimate	Estimated income tax on profit	Planning tax payments

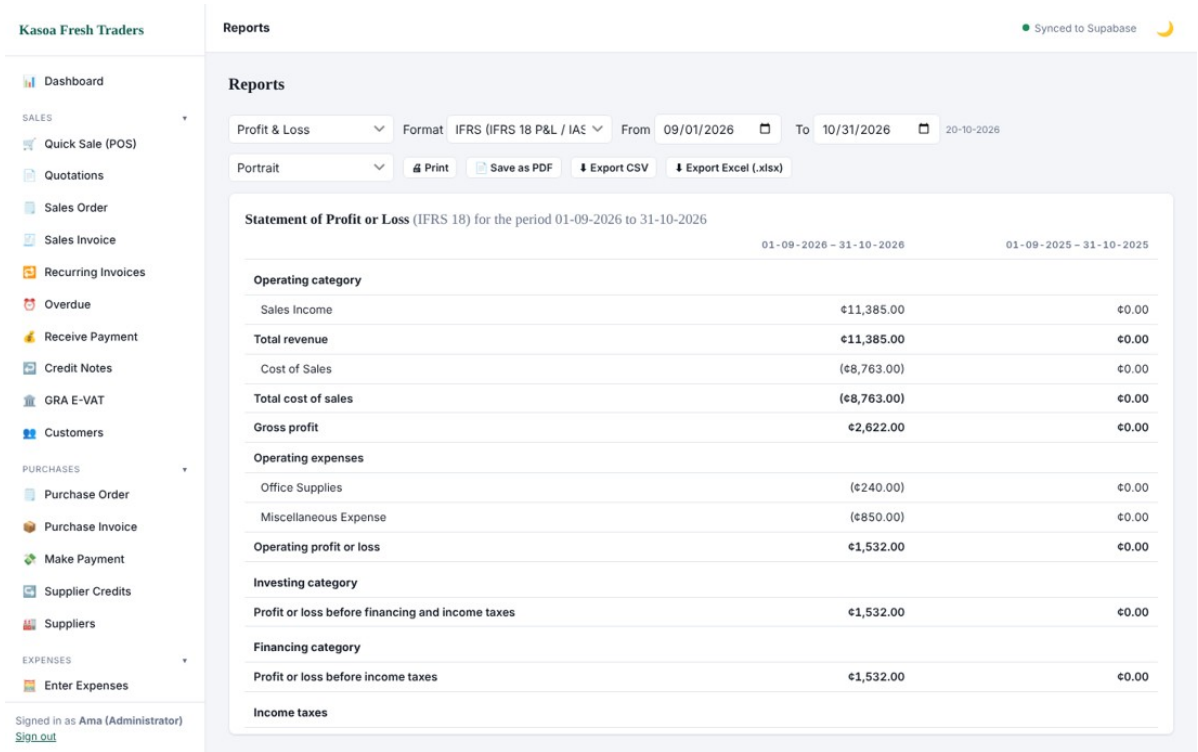

10.1 Trial Balance

Trial Balance

Total debits must equal total credits. If they do not, contact support before reporting.

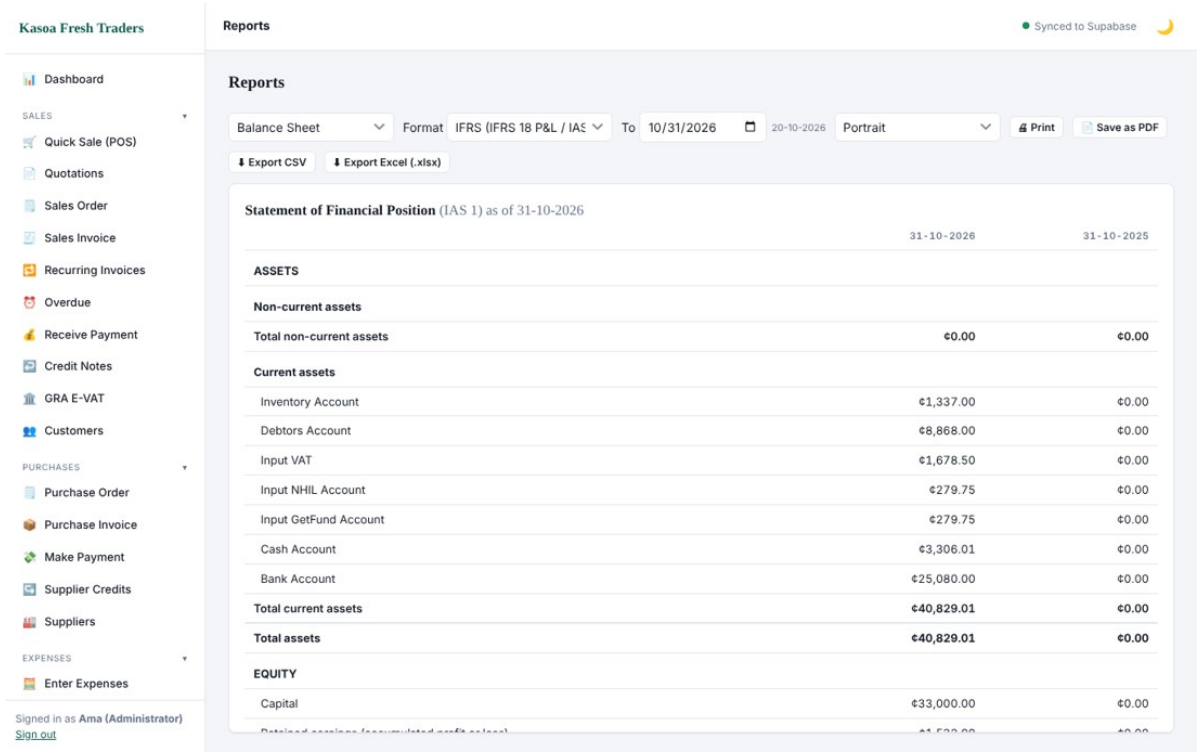

10.2 Profit & Loss

Profit and Loss

It shows Sales, less Cost of Sales equals Gross Profit, less Expenses equals Net Profit. Use the format switch for the classic layout. Click a line to see its transactions.

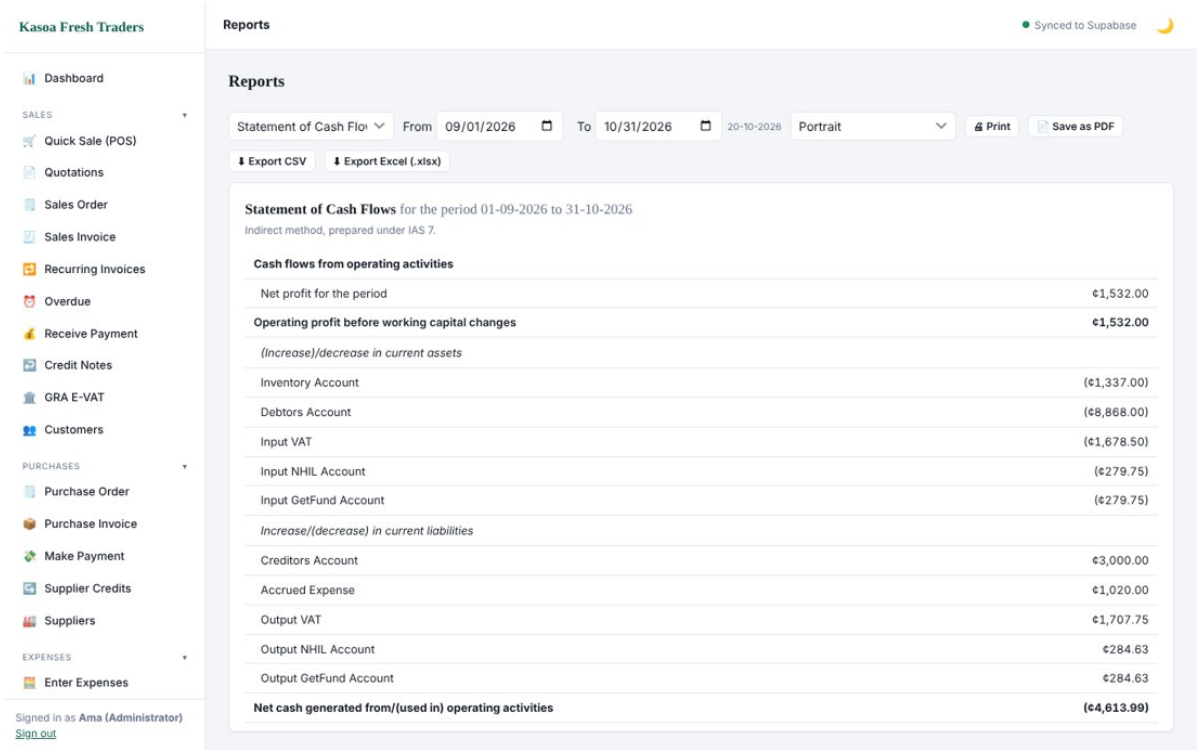

10.3 Balance Sheet

Balance Sheet

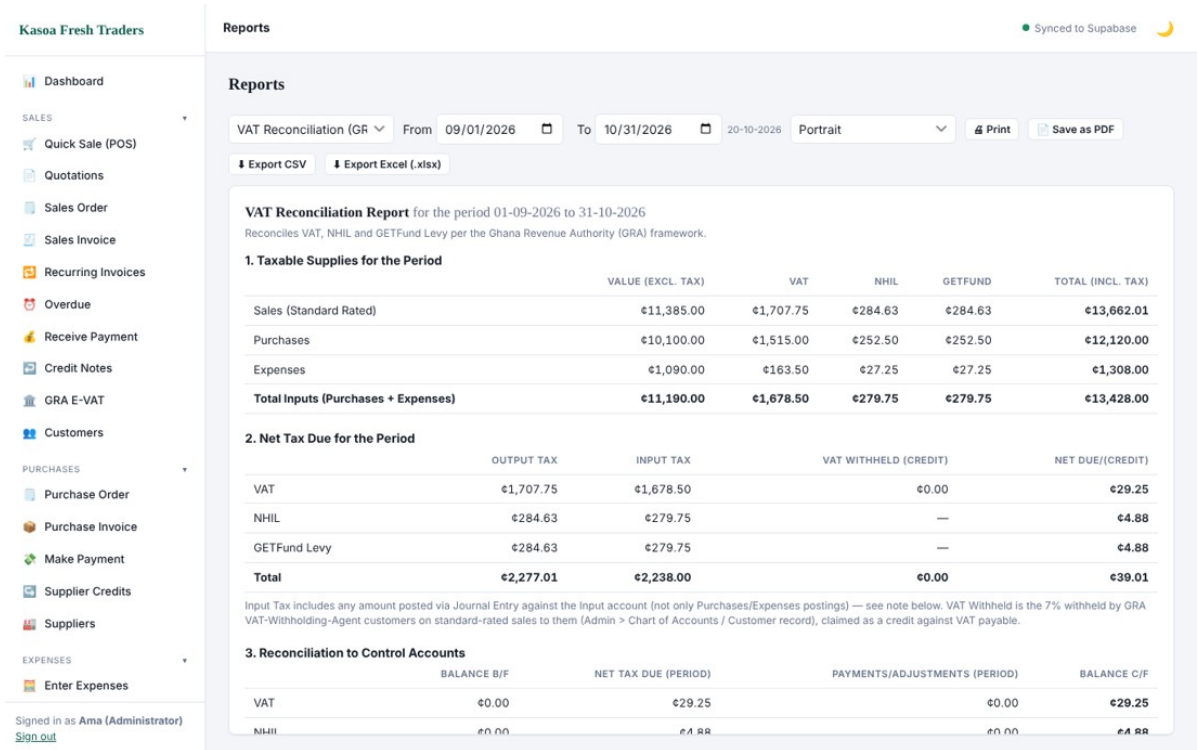

Assets must equal Liabilities plus Equity. Current-year profit is included in equity automatically.

10.4 Cash Flow

Cash Flow

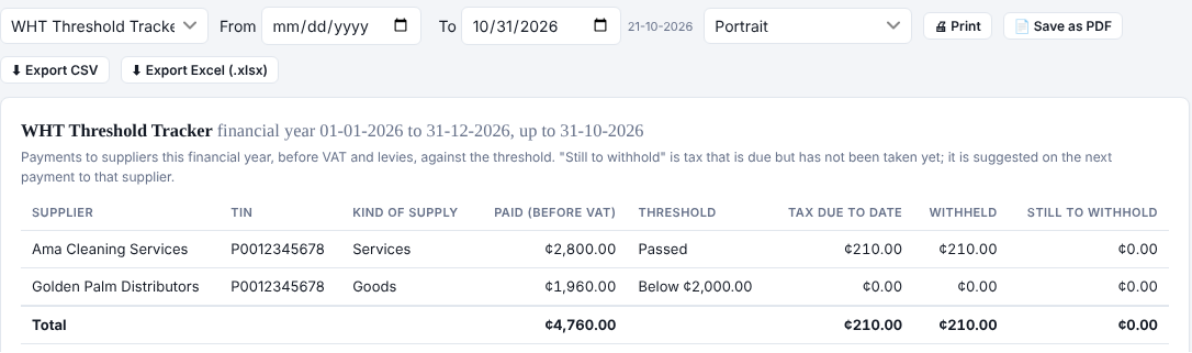

10.5 VAT reconciliation and GRA returns

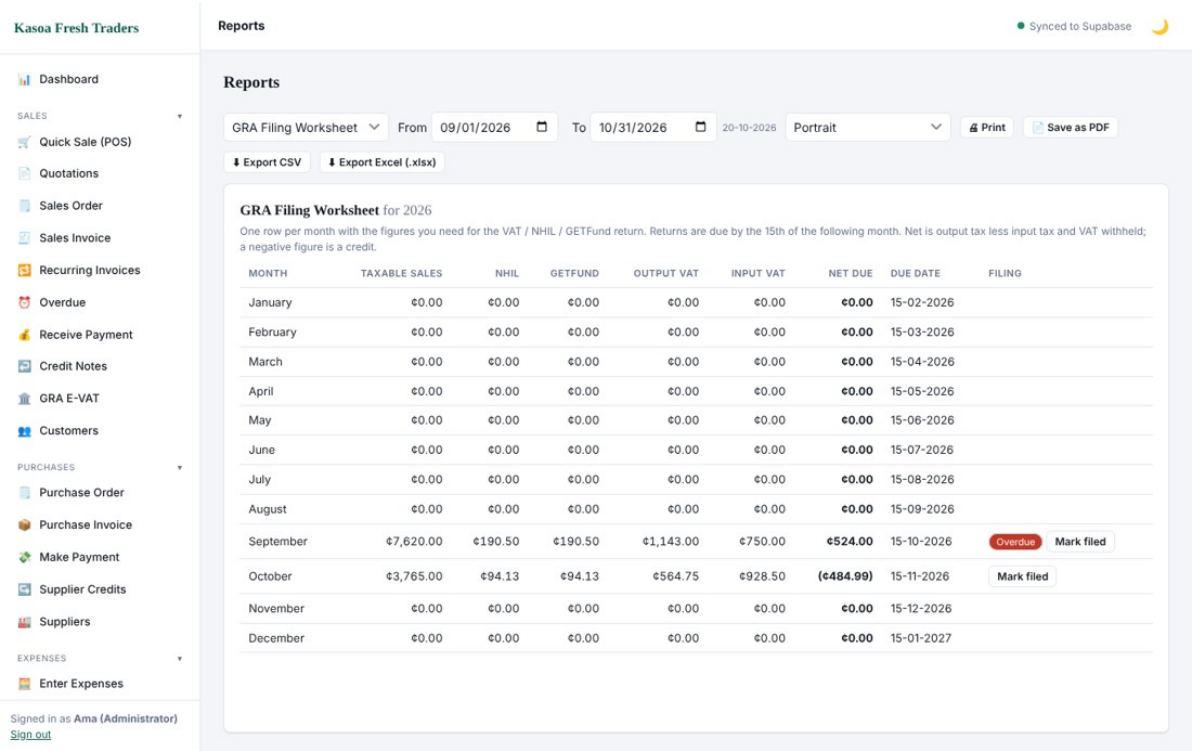

VAT reconciliation

The VAT report separates output VAT, NHIL, GetFund and COVID levy from the input amounts you can claim. The GRA Monthly report brings the month's tax figures together so that you can copy them into the GRA portal.

The **WHT Register** lists the tax withheld from suppliers and by customers, with the amount before VAT it was worked out on. The **WHT Reconciliation** shows what you owe GRA and what customers have withheld from you, by rate. The **WHT Threshold Tracker** shows each supplier's payments in the financial year against the GHS 2,000 threshold, the tax due, what has been withheld and what is still to withhold (section 7.8). Tax withheld from suppliers is due to GRA by the 15th of the following month.

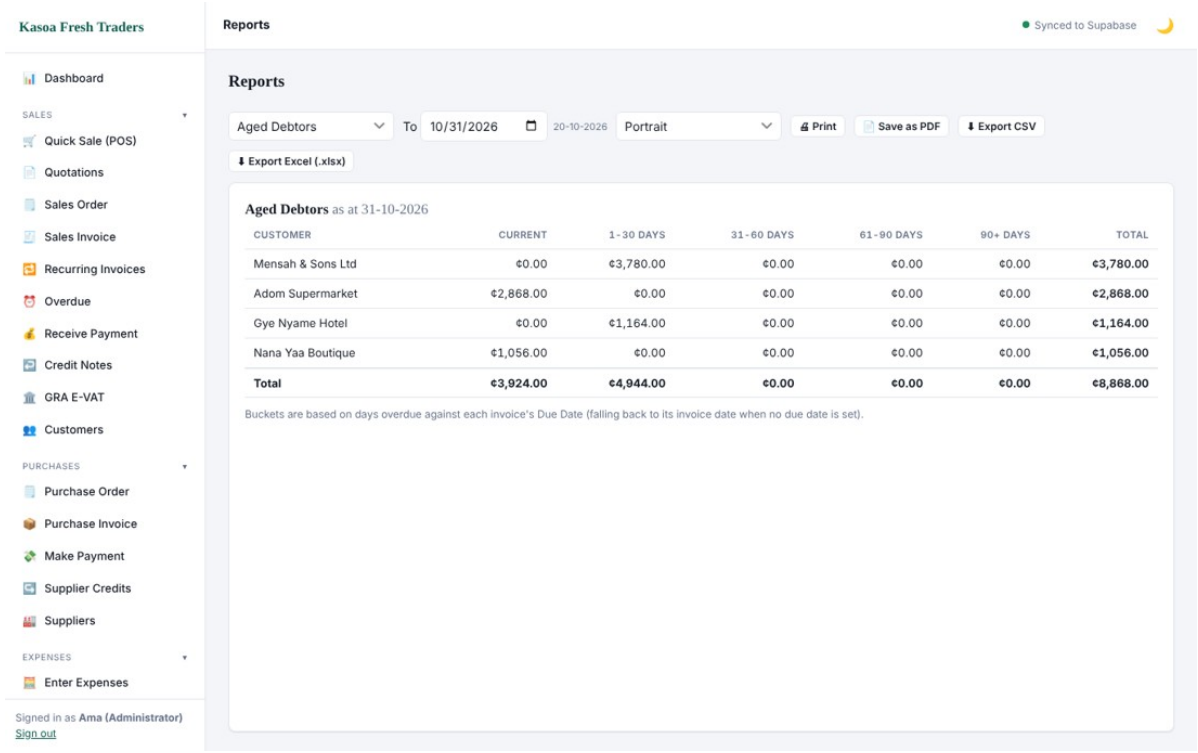

WHT Threshold Tracker

GRA monthly returns

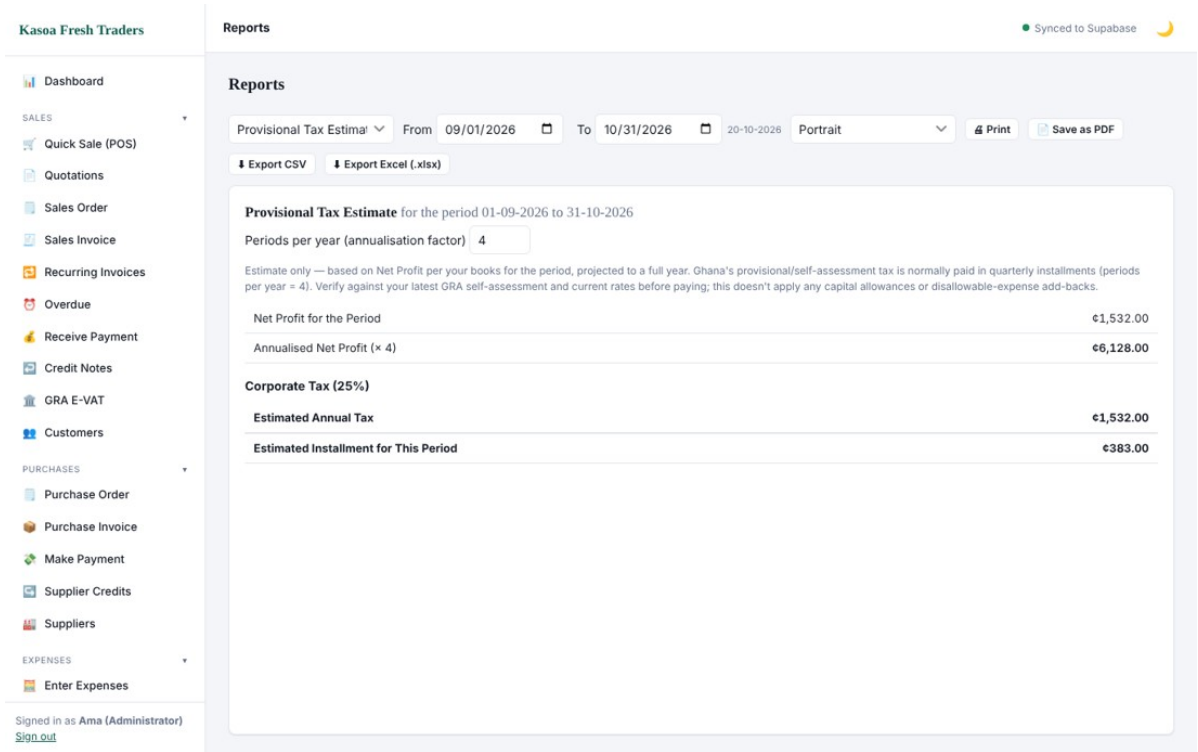

10.6 Aged debtors

Aged debtors

Buckets show current, 30, 60, 90 and over-90-day balances per customer.

10.7 Tax estimate

Tax estimate

The estimate is a planning aid, not a tax computation. Your accountant must confirm the figure before you pay or file.

10.8 Management pack

The management pack prints the key reports together with a cover page for owners, banks and auditors.

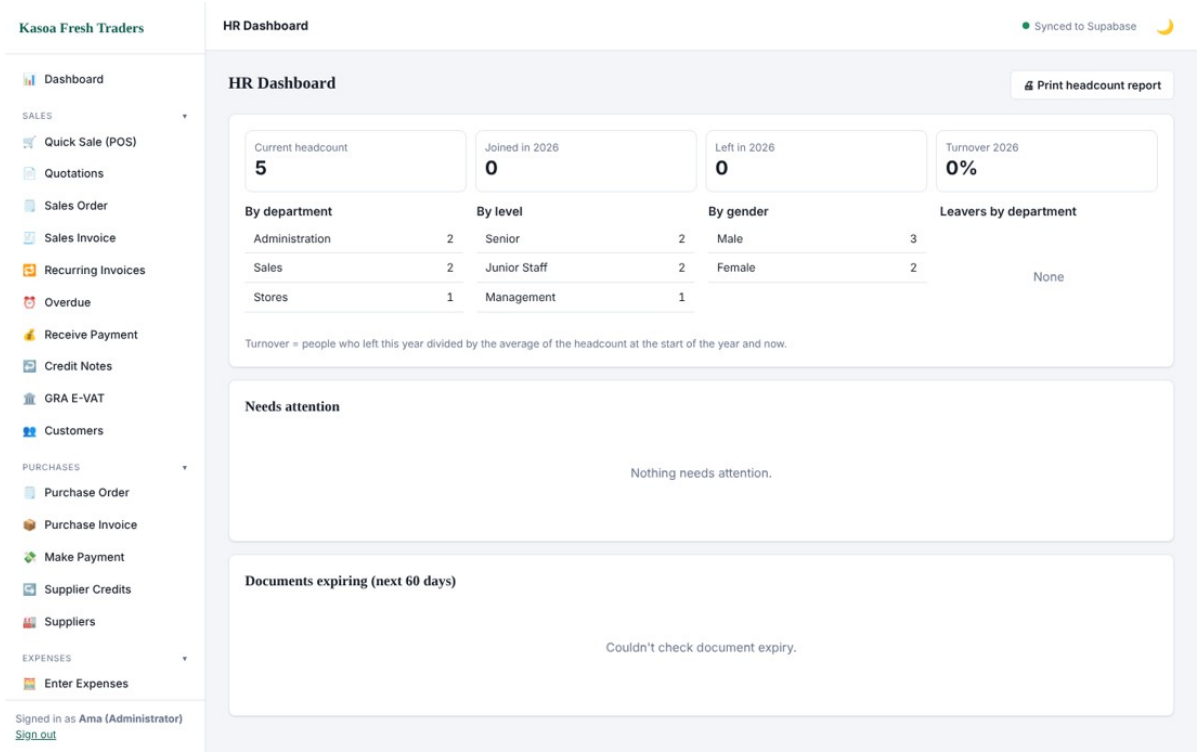

10.9 Exporting and printing

Use **Print** for paper and **Save as PDF** for a file. **Export CSV** and **Export Excel** give you the table for further analysis. Dates in exports follow your General Settings format.

11. HR and Payroll

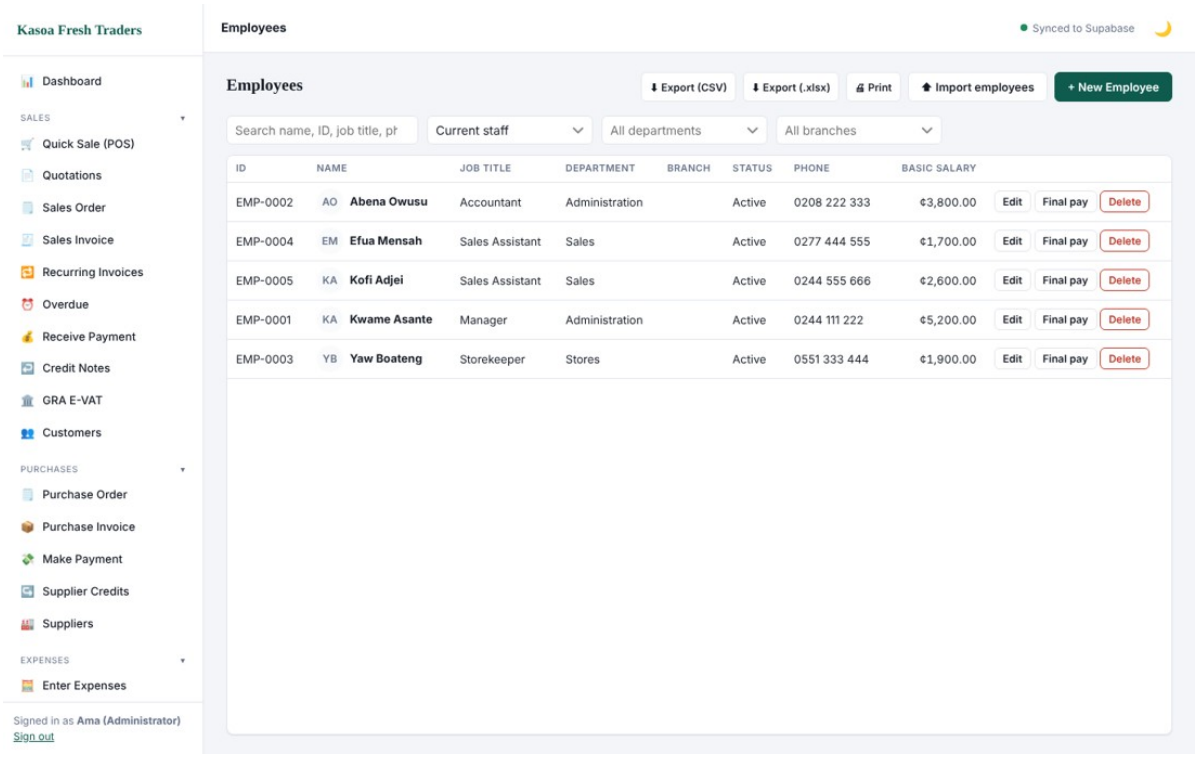

HR and Payroll are optional. HR (staff records, leave, loans, attendance) is part of the main program. **Payroll** (payslips, PAYE, SSNIT) is a paid add-on that needs its own licence. Give access only to people who may see staff pay.

11.1 HR dashboard and employees

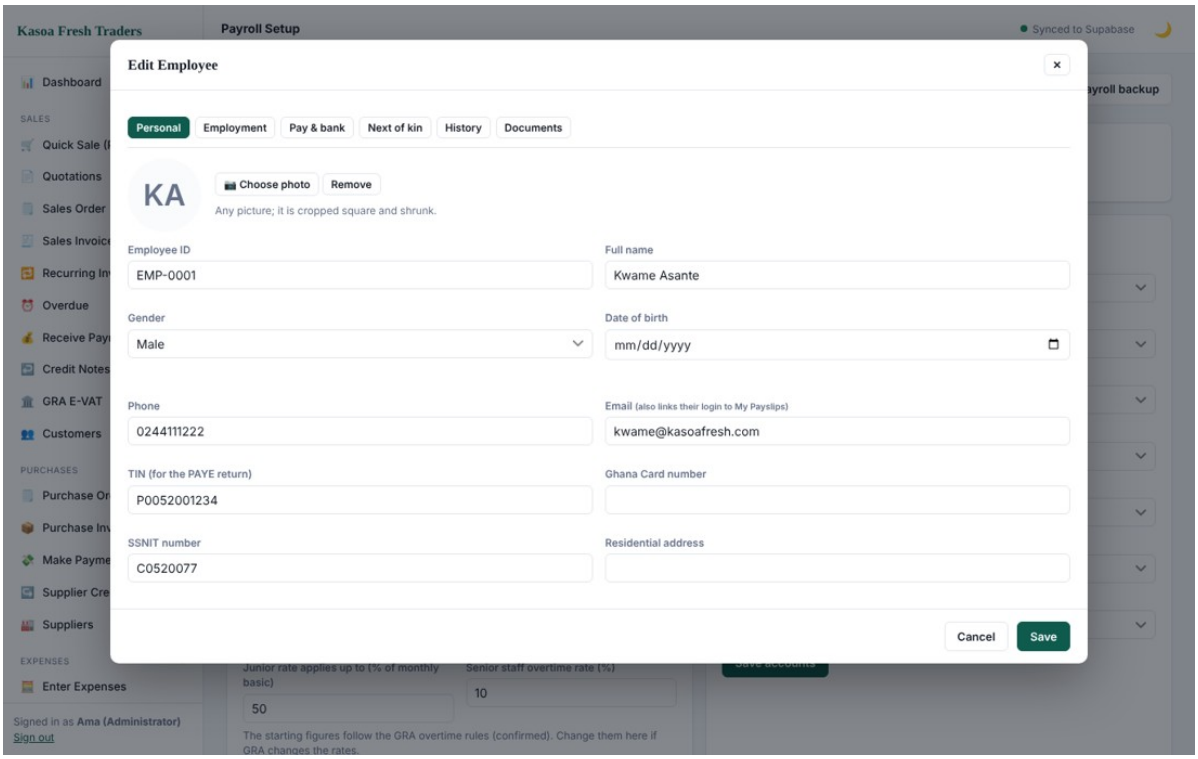

HR dashboard

Open **Employees** to see your staff, then click **New employee**.

Employees

1. Enter personal details: full name, gender, date of birth, phone and address.
2. Enter job details: department, position, start date and employment type.
3. Enter pay details: basic salary and allowances, bank details, SSNIT number and TIN.
4. Save.

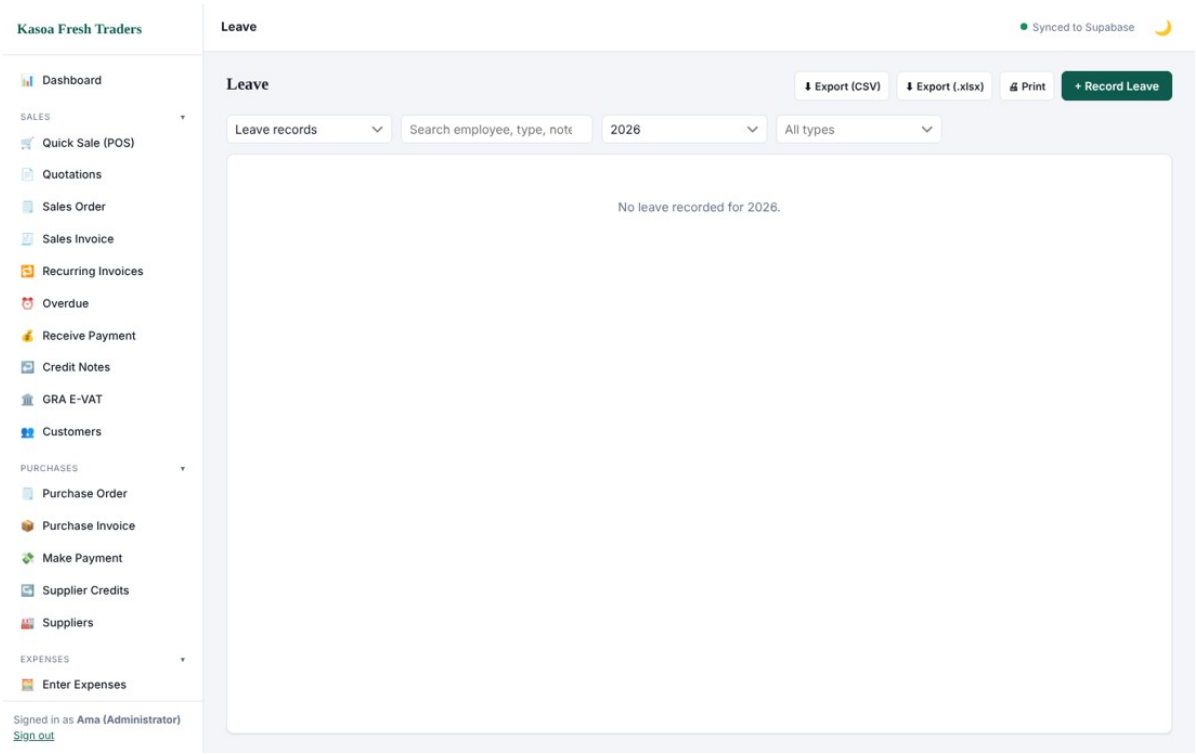

Employee form

You can import many employees from a spreadsheet using the import option on the Employees screen.

11.2 Leave, requests, loans and attendance

- **Leave:** record leave types and balances; approve or reject requests. Approved leave updates the balance.
- **Requests:** staff requests waiting for a manager's decision.
- **Loans:** record staff loans and monthly deductions. Payroll deducts them automatically.
- **Attendance:** daily check-in and check-out records.

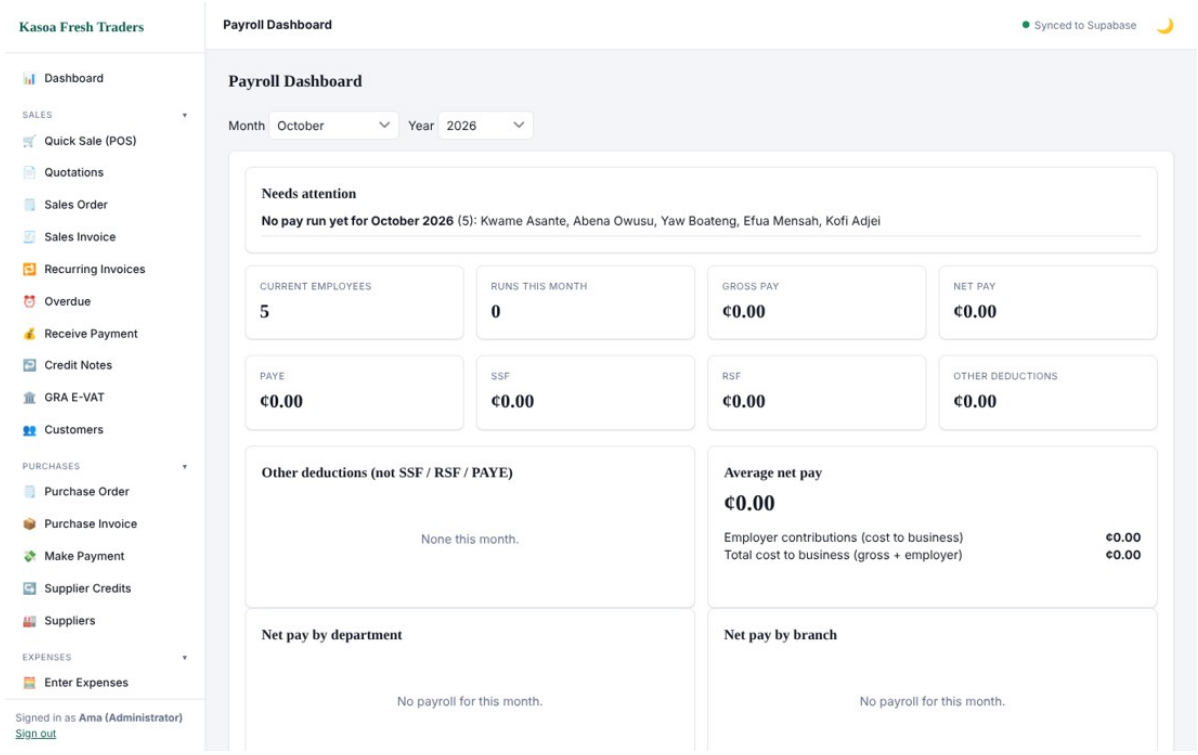

Leave

11.3 Payroll setup

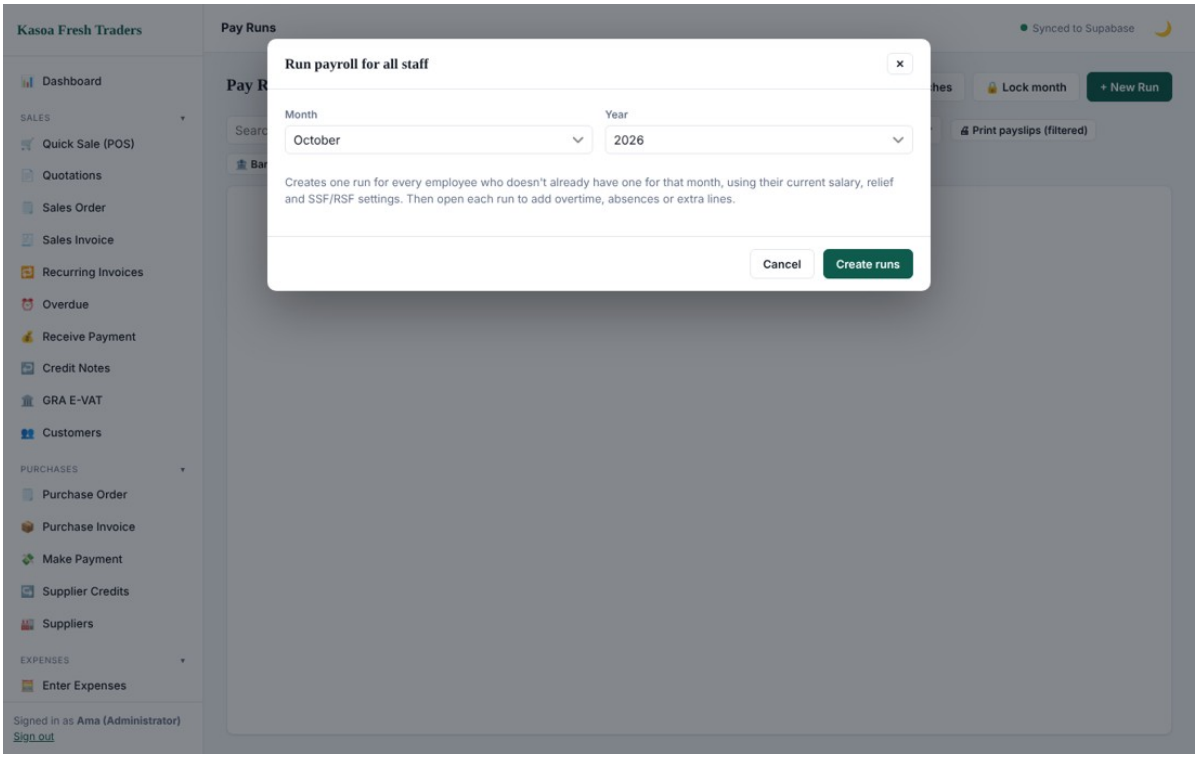

Before the first pay run confirm the tax tables (PAYE bands and SSNIT rates) in **Payroll Setup** and the accounts payroll posts to.

11.4 Running payroll

Payroll dashboard

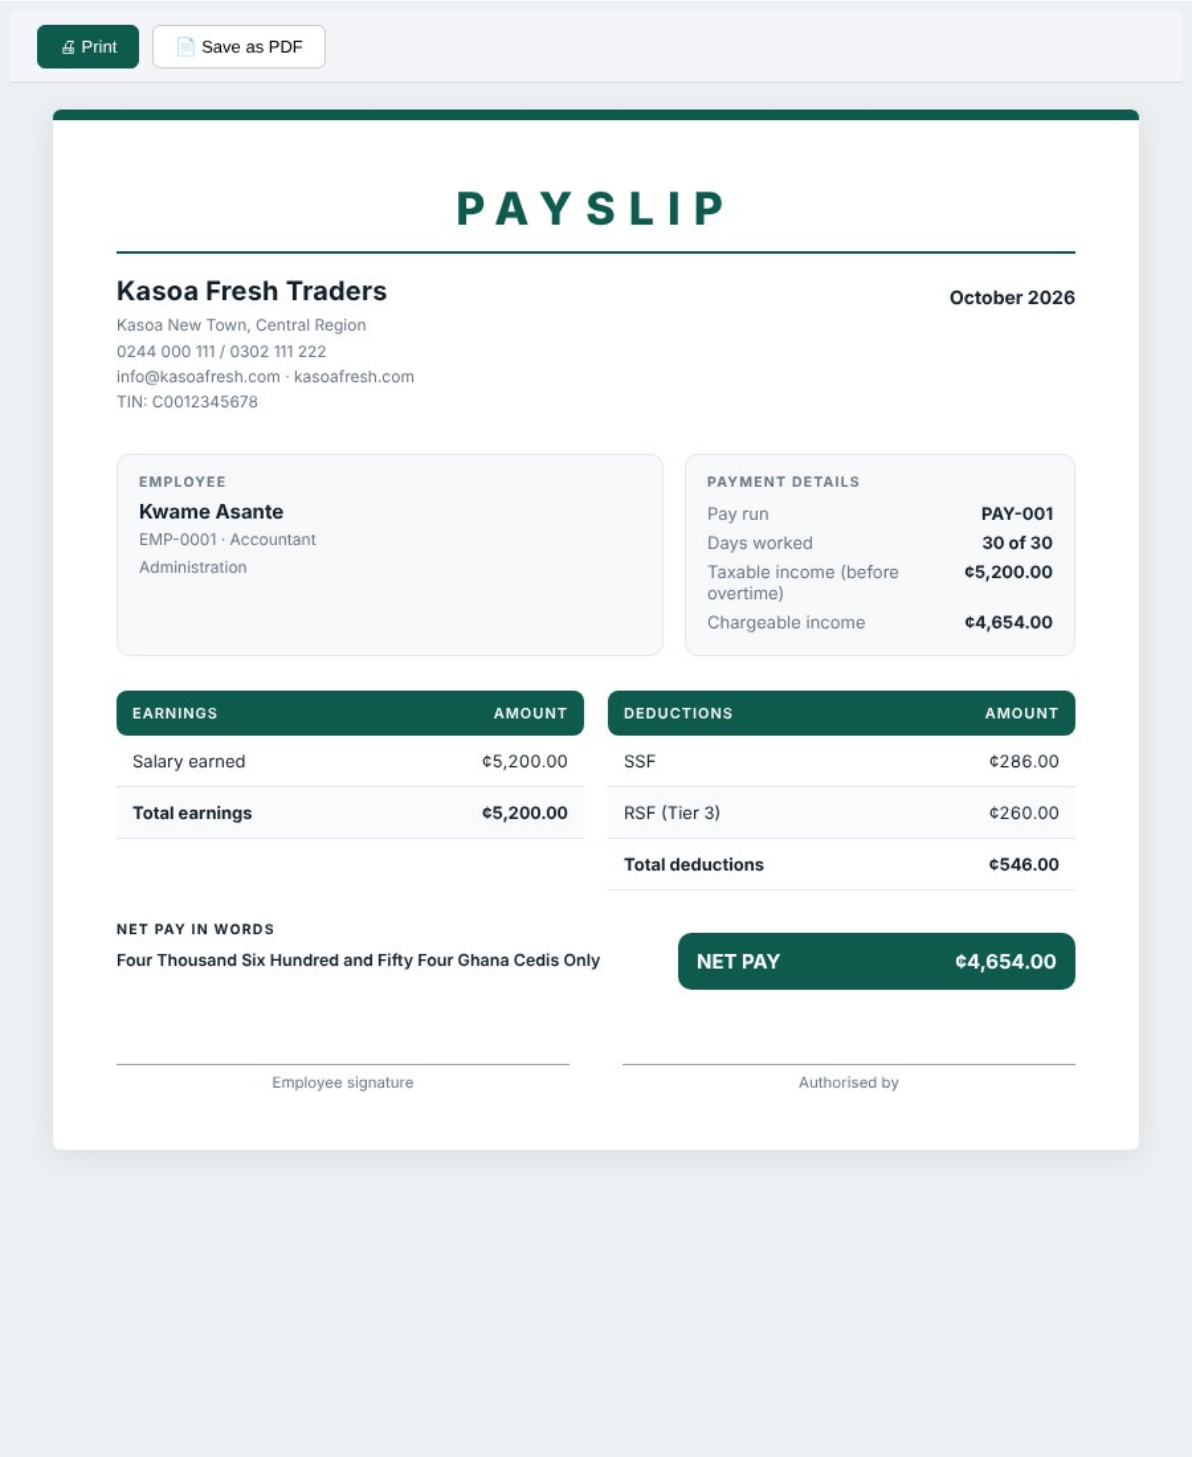

1. Open **Pay Runs** and start a new run for the month.
2. Review each employee's gross pay, allowances, deductions, SSNIT, PAYE and net pay.
3. Adjust a figure where needed (overtime, absence, one-off bonus).
4. Approve the run.
5. **Post** the payroll to accounts. The program debits salaries and employer SSNIT and credits PAYE, SSNIT and net salaries payable.

Run payroll

11.5 Payslips

Open a pay run and click an employee to print or share the payslip.

Payslip

11.6 Paying and remitting

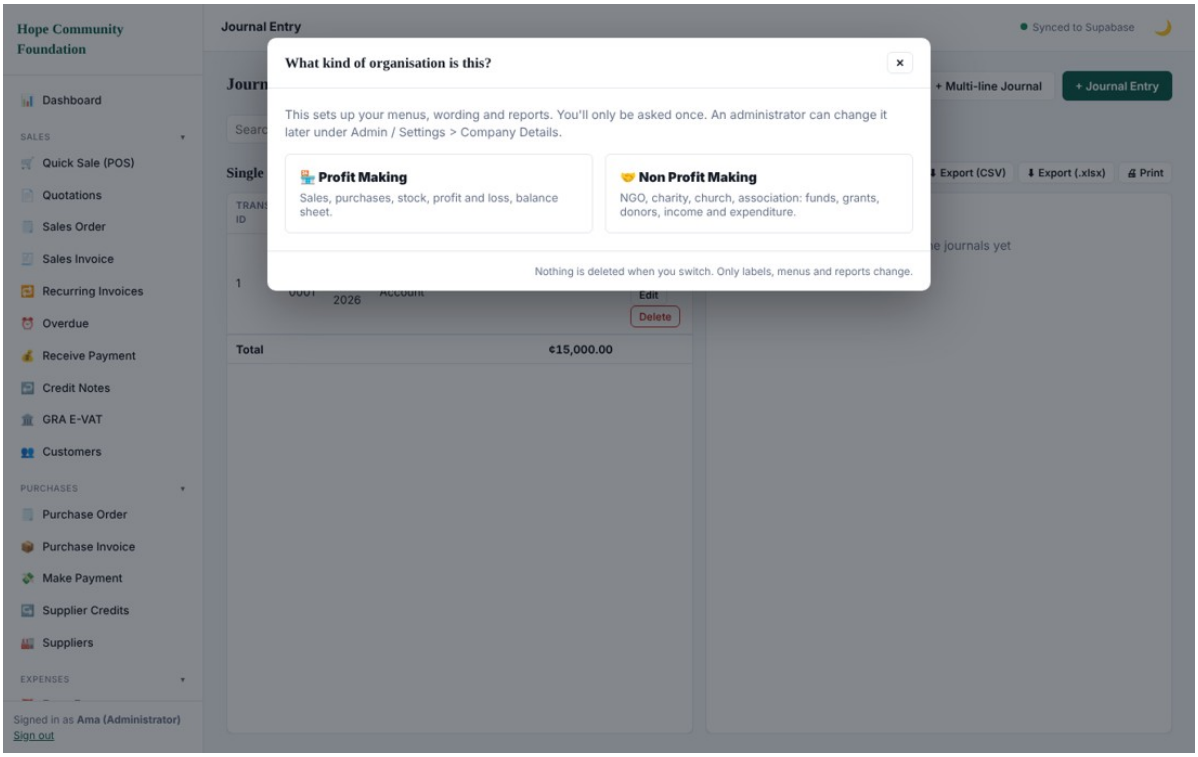

Pay net salaries from the bank with **Make Payment** or an expense payment against the salaries payable account. Remit PAYE to GRA and SSNIT to the SSNIT office by the due dates, then record those payments the same way. Payroll reports (PAYE schedule, SSNIT schedule, pension) support the filings.

12. NGO / Non Profit mode

Non Profit mode is for NGOs, churches, associations and foundations. It keeps the same accounting engine but adds funds, grants, donor reporting and non-profit statements. The screenshots in this section come from a sample organisation, Hope Community Foundation.

12.1 Choosing the mode

After your first sign-in the program asks whether the organisation is **Profit Making** or **Non Profit**.

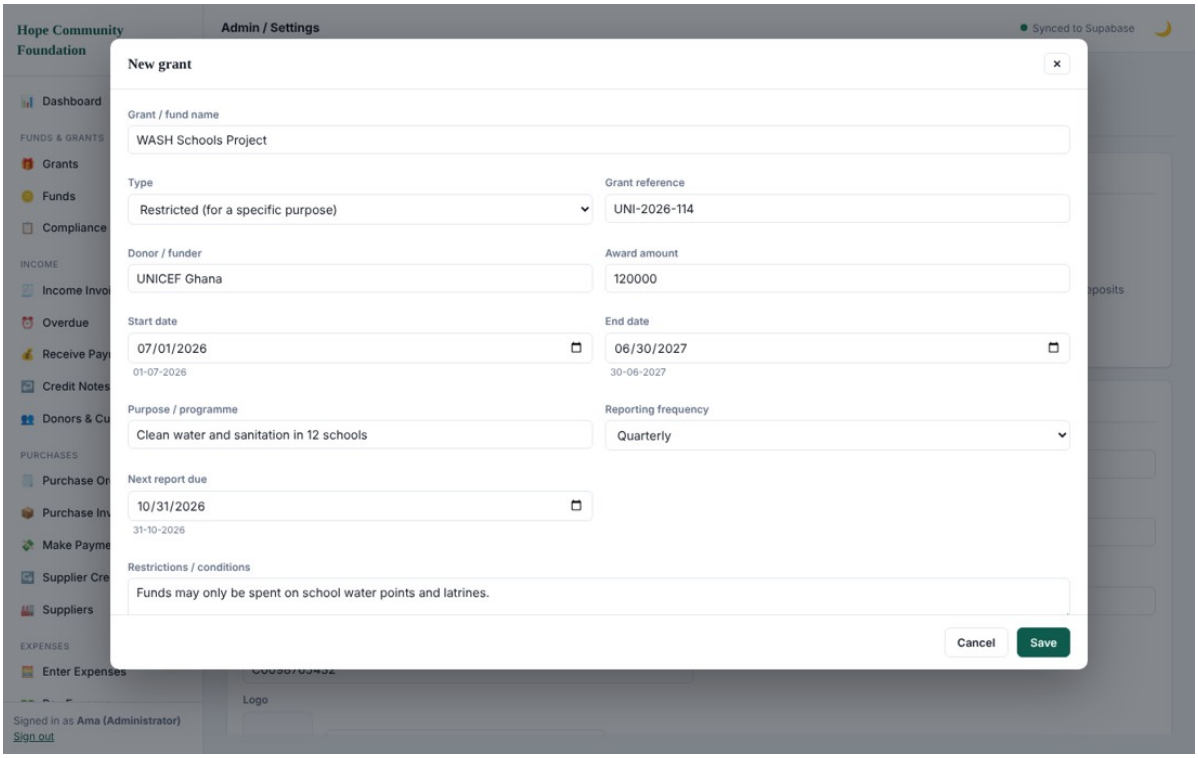

Choose organisation type

The choice is saved in **Admin / Settings, Company Information, Organisation type**. You can change it later; nothing is deleted. Choosing Non Profit adds the NGO menus (Grants, Funds, Compliance), NGO wording (Income and Expenditure, Donors) and an NGO set of accounts.

In Non Profit mode the menu starts with a **Funds & Grants** group (Grants, Funds, Compliance). Under Admin, Company Information, you can hide menus a Non Profit does not use, such as Quick Sale, Quotations, Sales Order, Recurring Invoices, Jobs and GRA E-VAT. Other menus you can hide are Overdue, Credit Notes, Purchase Order, Supplier Credits, Petty Cash, Fixed Assets, Bank Reconciliation, Budget vs Actual, Month-end Checklist, Management Pack, Currencies and Audit Log, and the whole HR / Employees or Payroll group.

12.2 Grants

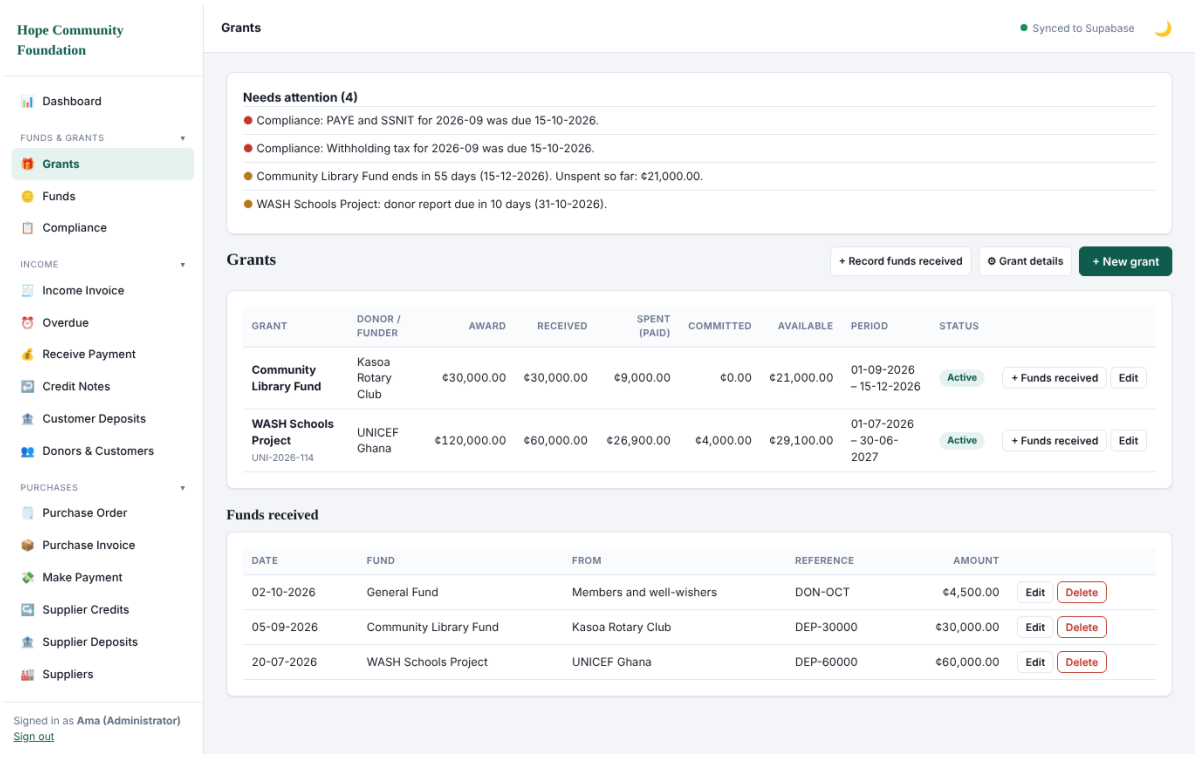

A grant is money given for an agreed purpose. Open **Grants** and click **New grant**.

Grant form

1. Enter the grant name, donor, award amount, start and end dates, purpose and reference.
2. If the grant is in another currency choose it and enter the fixed exchange rate agreed with the donor.
3. Enter the reporting frequency and next report date. The program reminds you when a donor report is due.
4. Add **budget lines**: pick an expense account and the amount approved for it.
5. Add **expected instalments** (tranches) with date and amount.
6. Write any donor conditions, then save.

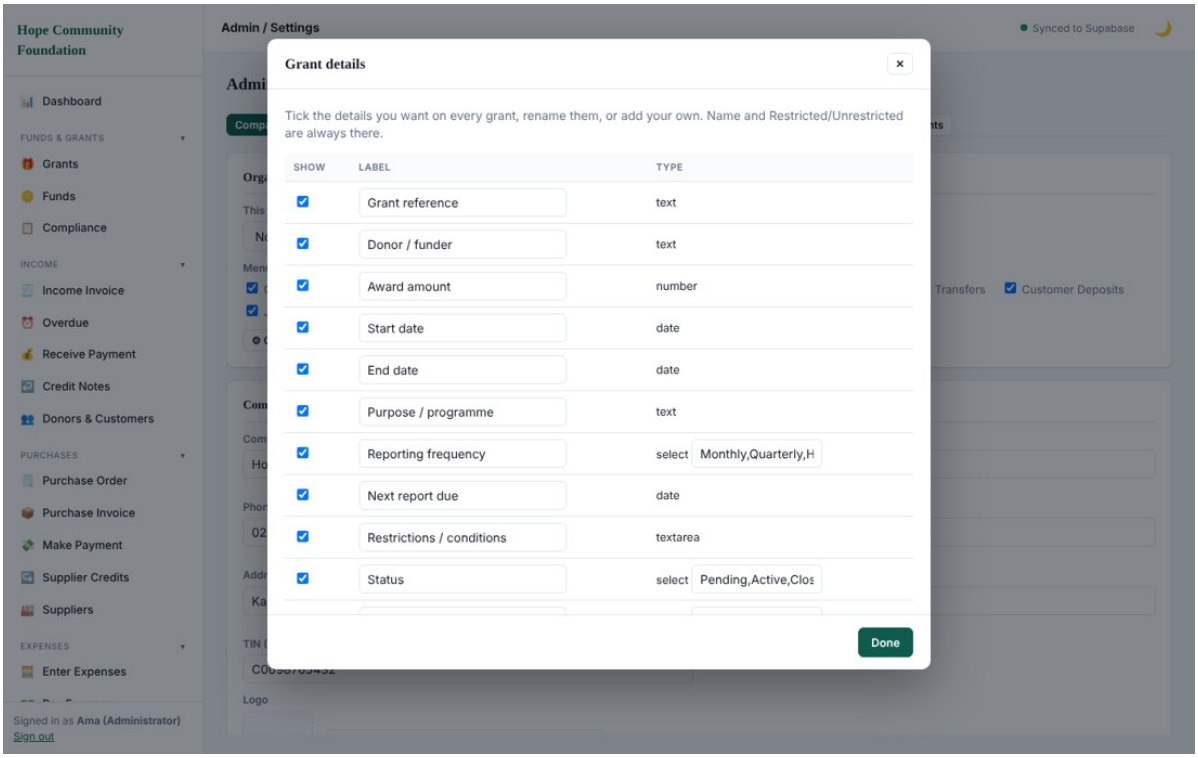

The grants list shows award, received, spent (paid), committed, available and status for each grant, with an attention panel for upcoming reports, grants about to end and compliance deadlines.

Grants list with Spent, Committed and Available

Spent (paid) is money that has gone out. **Committed** is bills charged to the grant that are not paid yet. **Available** is received minus spent minus committed. Use **Edit** in the Funds received table to correct a receipt.

The grant detail fields (donor reference, report frequency and so on) can be customised: click **Grant details** to add, rename or hide fields to suit your donors.

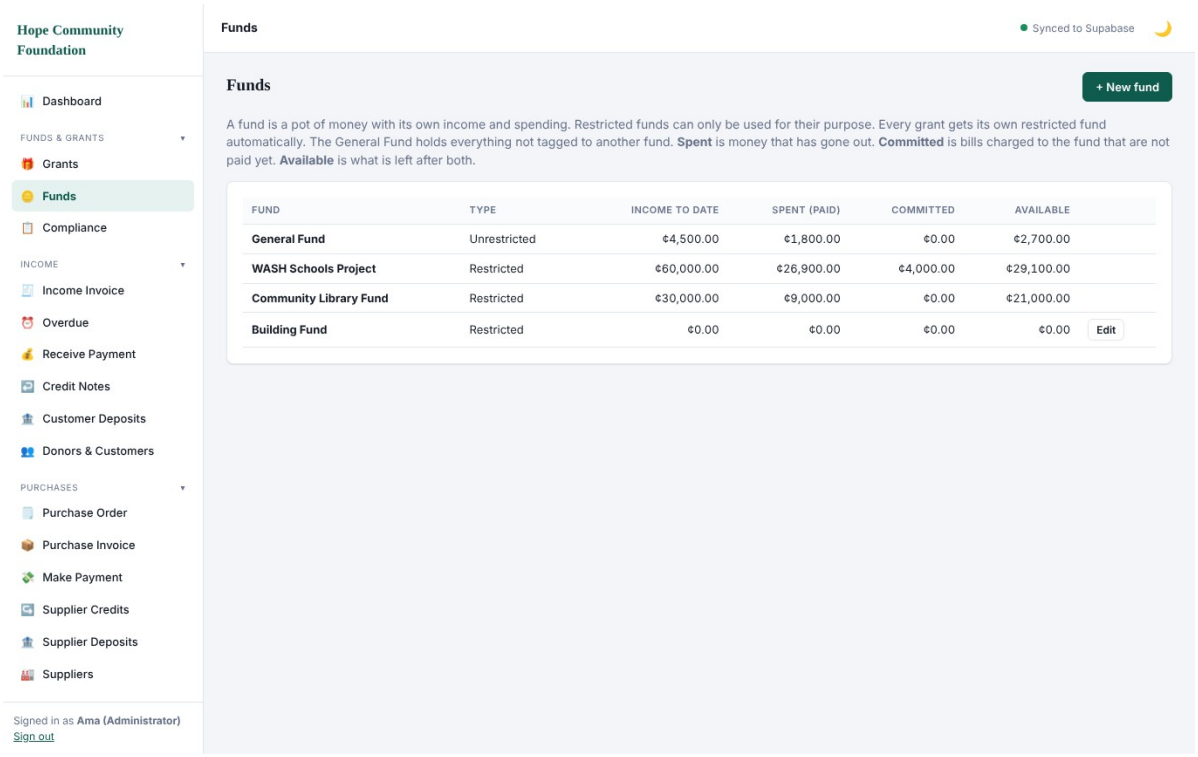

Customise grant fields

12.3 Funds and receiving money

A fund holds money for a purpose. Each grant creates a restricted fund. You can add others, such as a Building Fund, and the General Fund holds unrestricted money.

To record money received click **Record funds received**, choose the fund, donor, date, amount, reference and the bank account. This credits the fund as income.

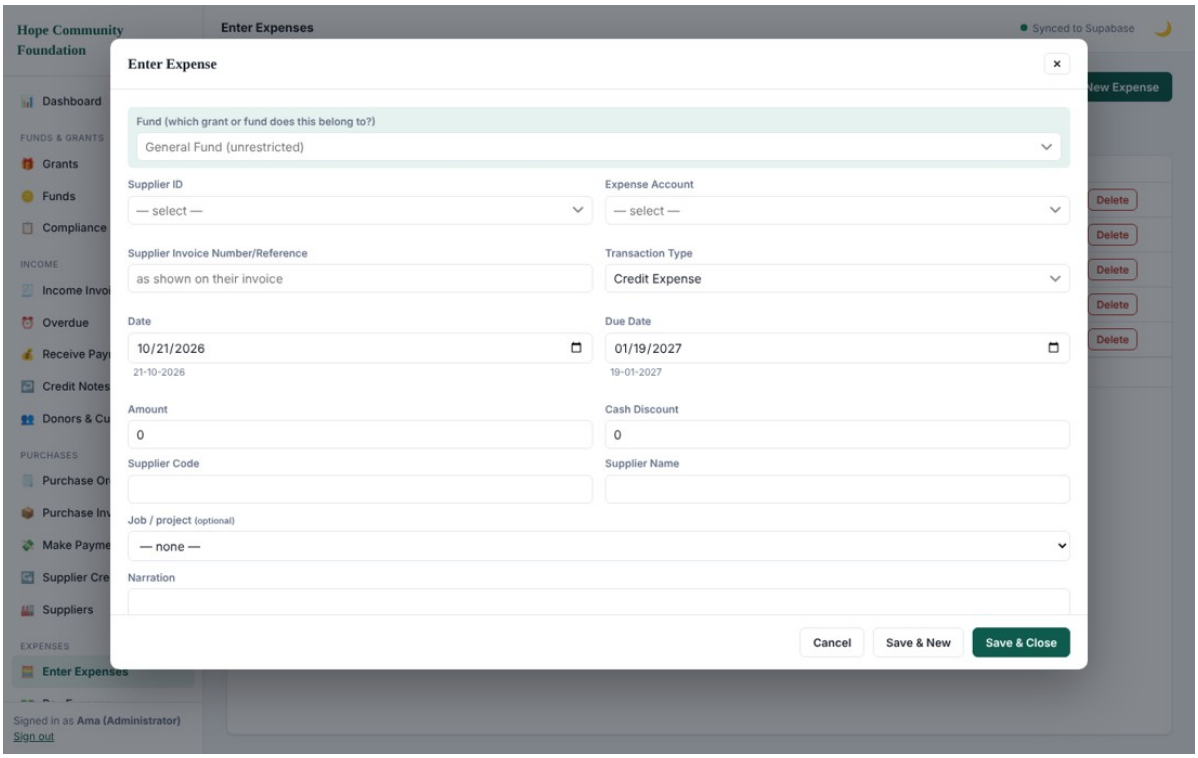

The Funds screen shows the same columns for every fund: income, spent (paid), committed and available.

Funds list

12.4 Tagging spending to a fund

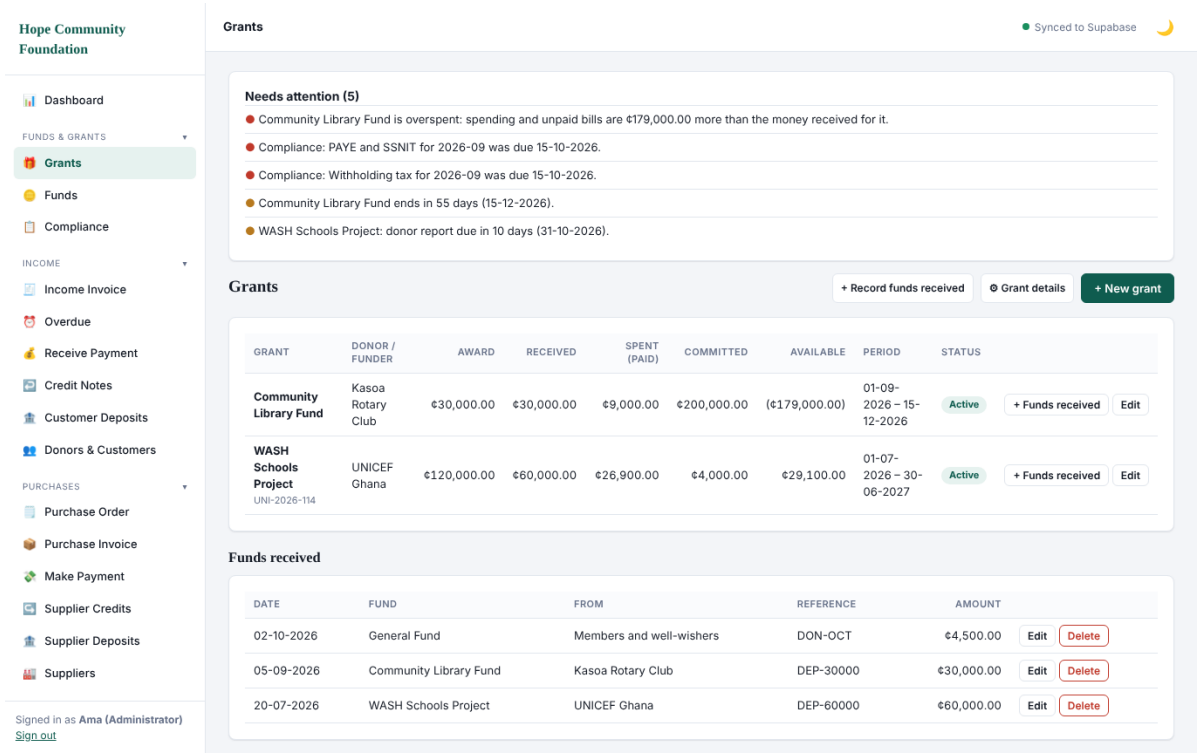

Every transaction form shows a **Fund** box at the top. Choose the grant or fund that pays for the cost; leave it as General Fund for ordinary running costs.

Fund picker on the expense form

A credit purchase or credit expense charged to a grant is **Committed**, not Spent, because the money has not gone out. When you pay the supplier, only the amount paid moves from Committed to Spent; the payment takes the fund from the original bill. Cash purchases and expenses count as Spent straight away. Purchases and stock bought for resale also count against the fund they are charged to.

If a restricted fund has spent or promised more than it received, a warning appears when you save, and the fund is listed in the **Needs attention** box.

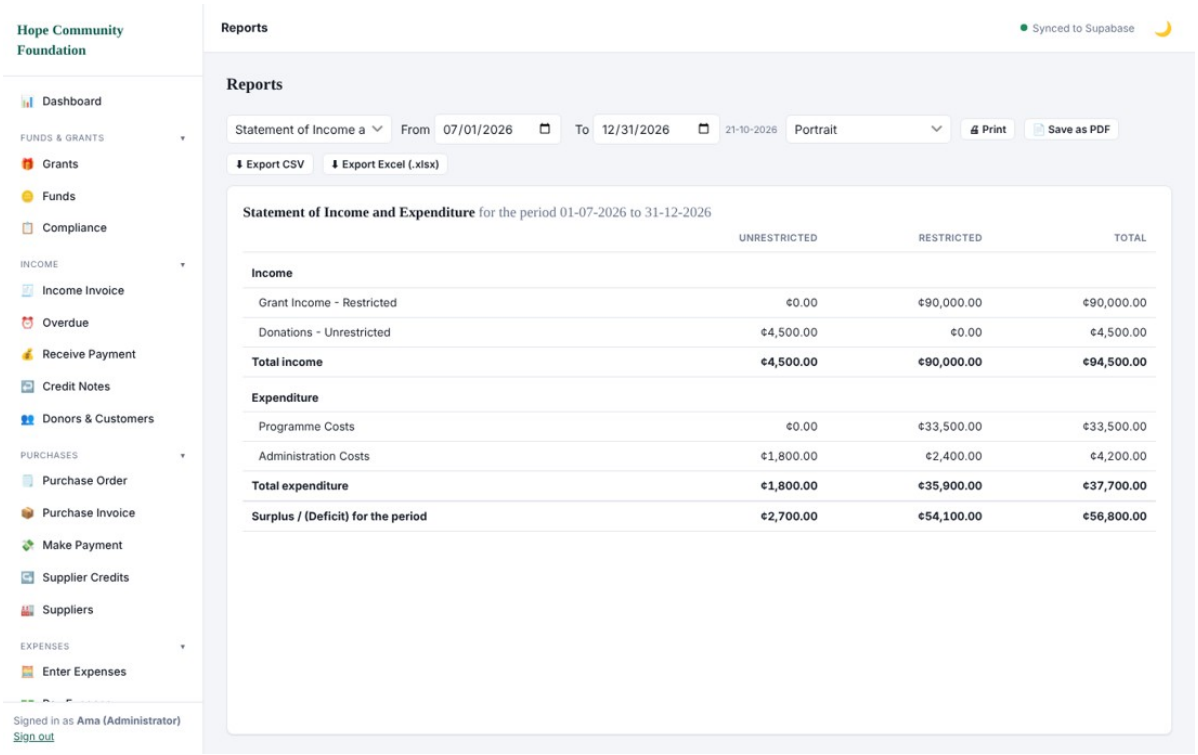

Overspend warning in Needs attention

Budget lines track against actual spending, so you see what is left on each line.

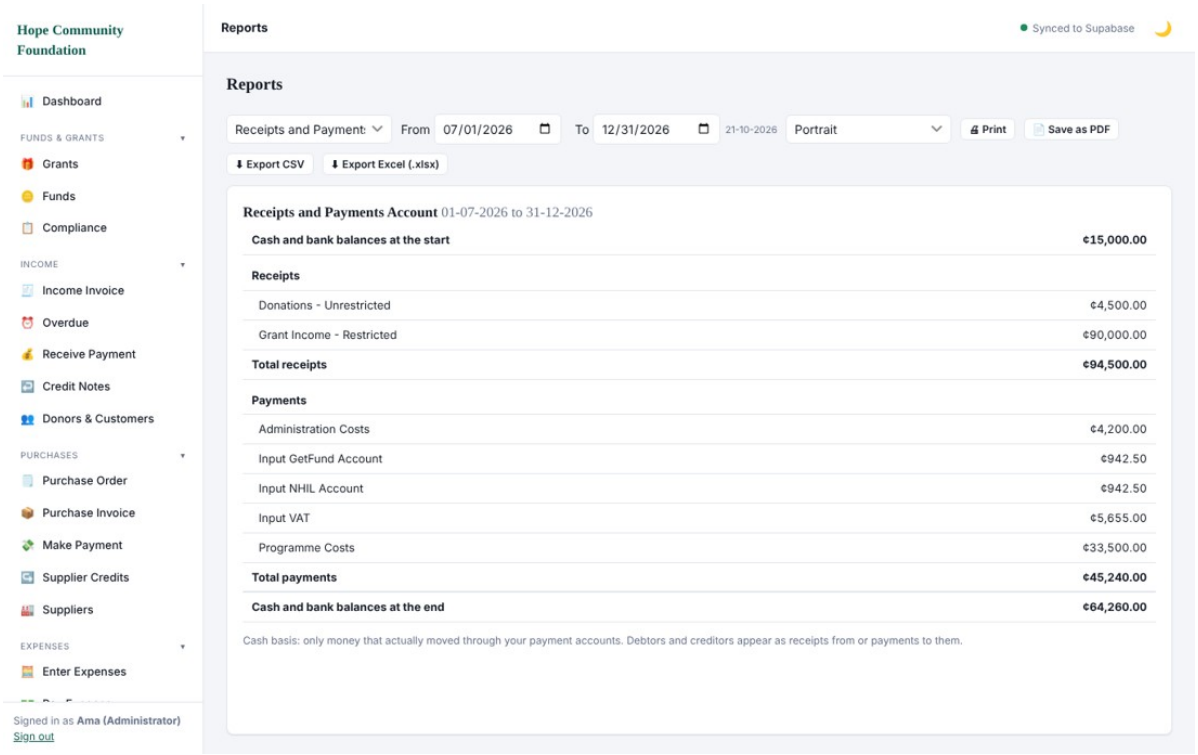

12.5 NGO reports

In **Reports** the list changes to non-profit reports:

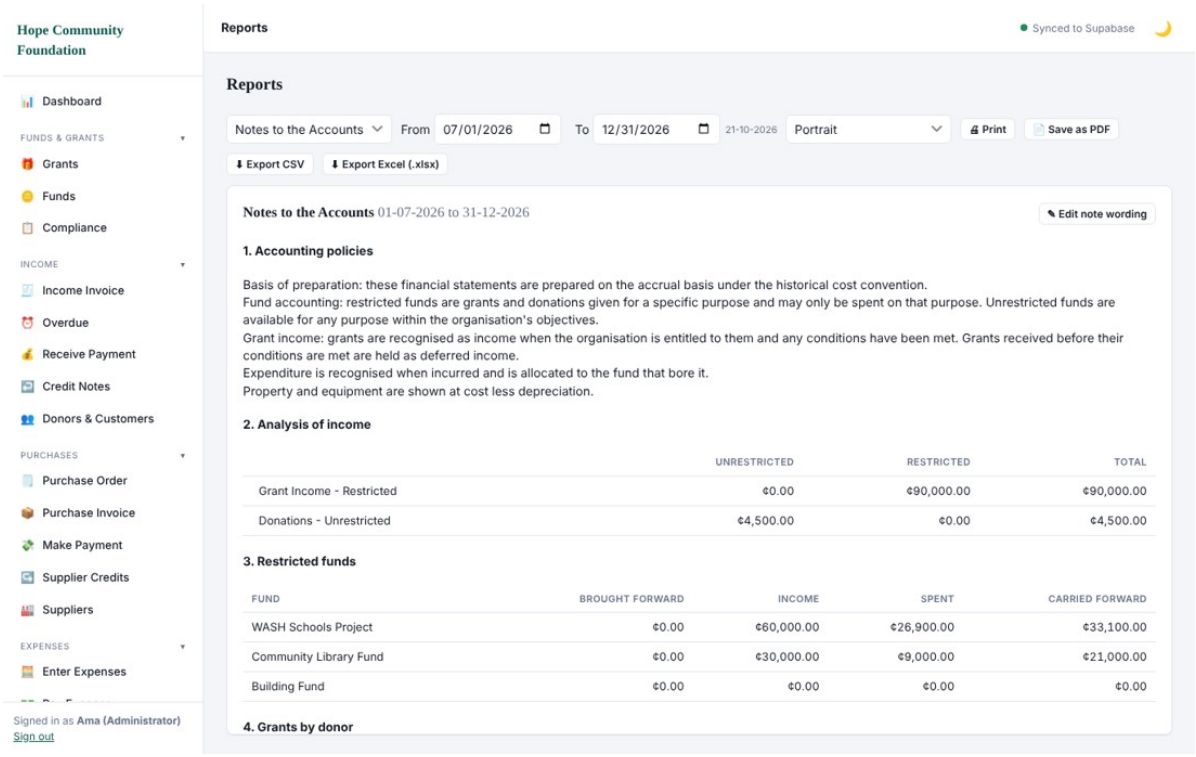

- **Statement of Income and Expenditure** with Unrestricted, Restricted and Total columns.
- **Statement of Financial Position** with funds shown as Unrestricted and Restricted.
- **Receipts and Payments Account** on a cash basis.
- **Fund Movement** (brought forward, income, spent, carried forward).
- **Notes to the Accounts** with editable policy wording.
- **Grant Report** and **Donor Report** with budget against actual and instalment status.
- **Cost Split** between programme and administration costs.

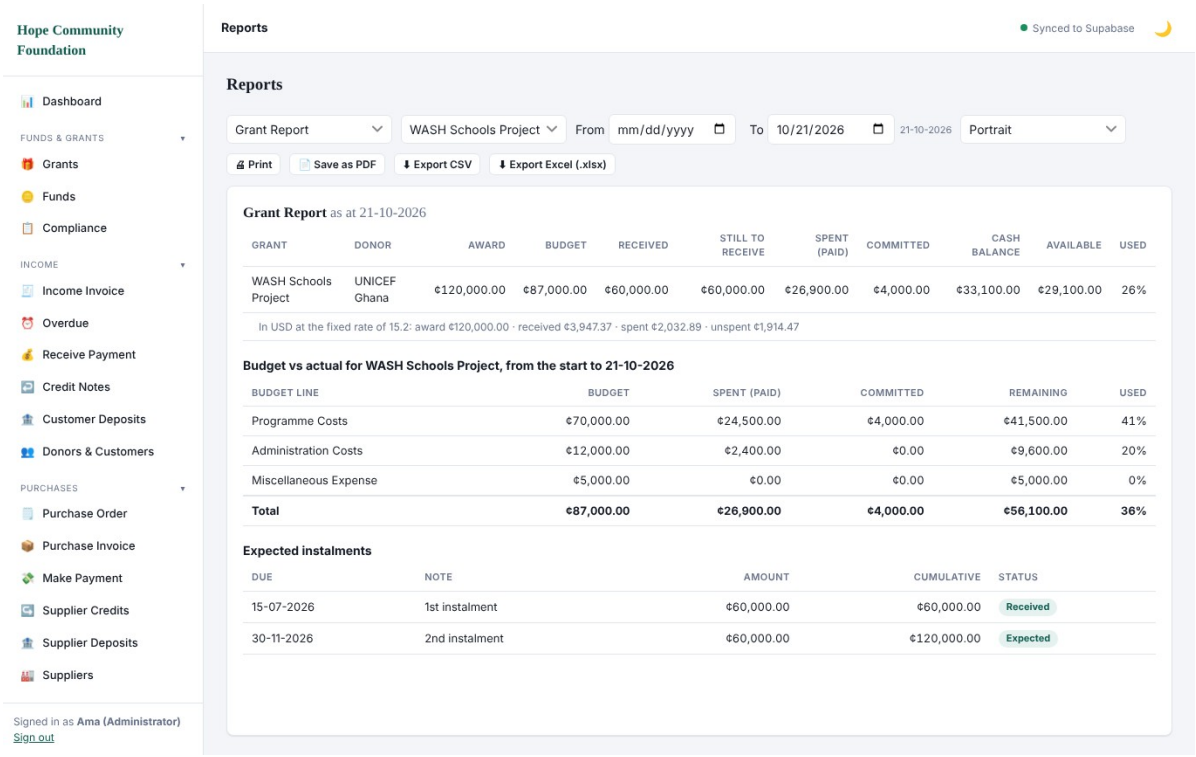

Statement of Income and Expenditure

Receipts and Payments

Notes to the Accounts

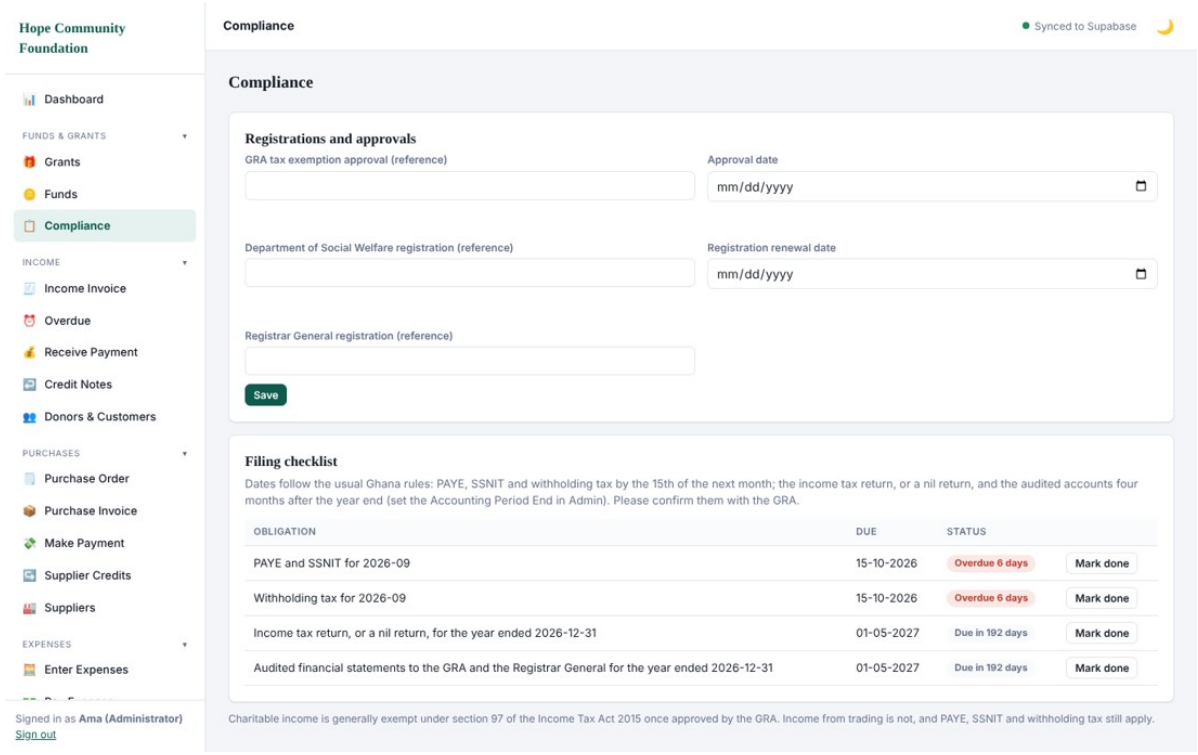

Grant report with Spent, Committed, Cash balance and Available

The Grant Report shows spent (paid), committed, cash balance (received minus spent) and available. For one grant, the budget lines table shows spent and committed for each line. The financial statements still record a cost when it is incurred.

12.6 Compliance checklist

The **Compliance** screen lists recurring obligations such as PAYE, SSNIT and withholding tax, with due dates by month, so that nothing is missed. Tick items as you file them. Check the dates against your own tax advice, because rules can change.

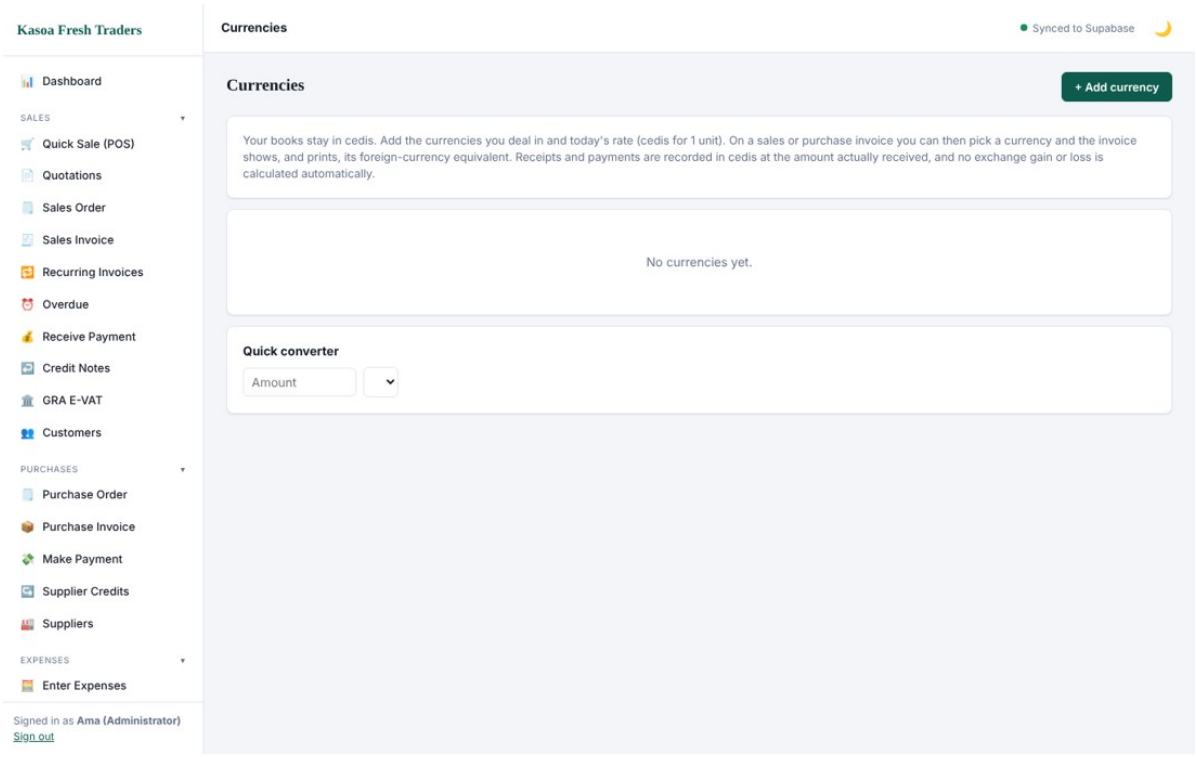

Compliance

13. Currencies, backups, audit log and tips

13.1 Foreign currencies

List the currencies you use in the currencies screen with their exchange rate to the cedi. Update rates when they change. Transactions in a foreign currency are converted at the rate in force when you save them.

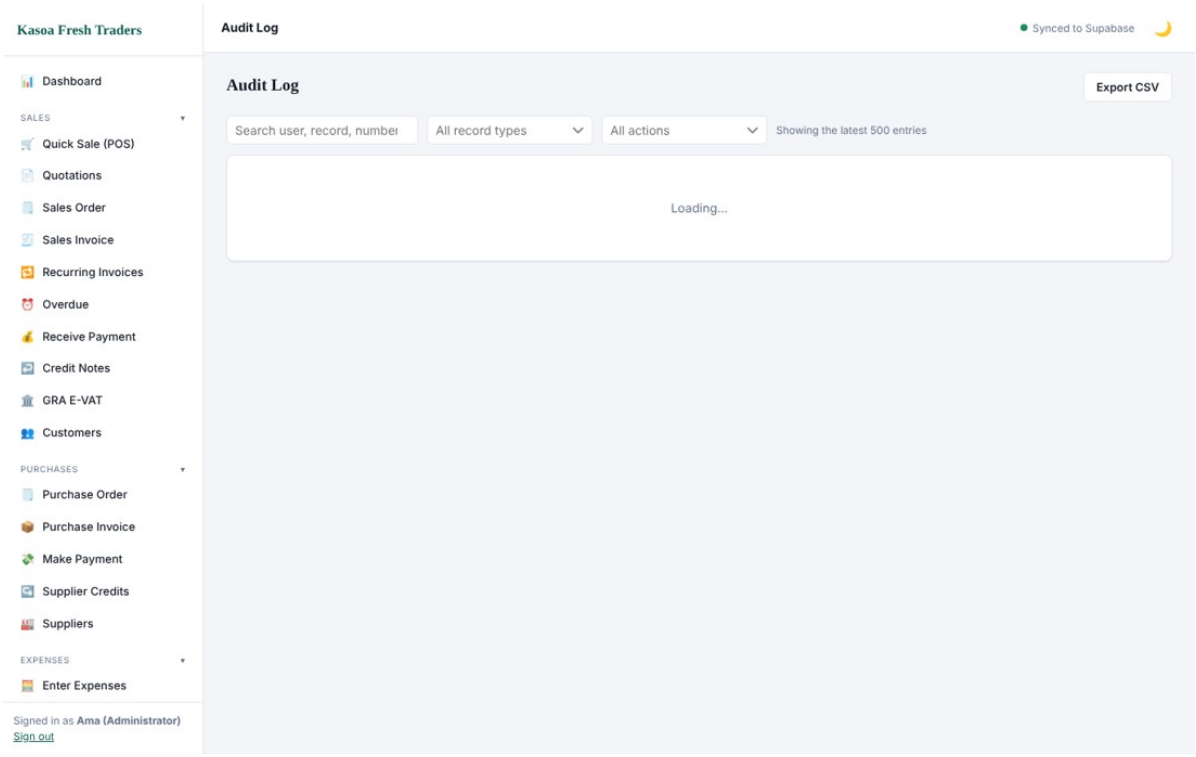

Currencies

13.2 Backups and data safety

Your books are stored in your online company database and saved as you work. Keep your own copies as well: export key reports to PDF or Excel at every month end, and keep the installer and licence key in a safe place.

13.3 Audit log

The audit log records who did what and when, including deletions.

Audit log

13.4 Good habits

- Record transactions the same day.
- Never delete a posted document; use a credit note or a reversing journal.
- Reconcile the bank every month.
- Close each month after reporting.
- Give every person their own sign-in; never share passwords.
- Review user rights every quarter.
- Check the Trial Balance before filing any return.

14. Troubleshooting and support

Problem	What to do
Cannot sign in	Check the email and password. Use **Forgot password?**. Check your internet.
Screen says the subscription is required	Your trial or licence has ended. Click **Enter licence key**, or contact support.
Licence key is refused	Re-copy it without spaces. Confirm the internet is on. Contact support with a screenshot.
"Period is closed" when posting	The date is on or before the closing date. Use a later date, or ask the Administrator to reopen the period.
Cannot save an expense or purchase	Check that Supplier, Account, Invoice number, Amount and Due date are filled. The message at

	the bottom tells you which.
Sale is blocked for a customer	The customer is over the credit limit or has an overdue invoice. Collect payment, or ask an authorised user to override.
Trial Balance does not balance	Contact support before filing anything.
A menu item is missing	Your role does not have the right. Ask the Administrator.
Numbers look wrong in a report	Check the From and To dates, and that all documents are posted.
The program shows an update prompt	Accept it. Updates install themselves.
